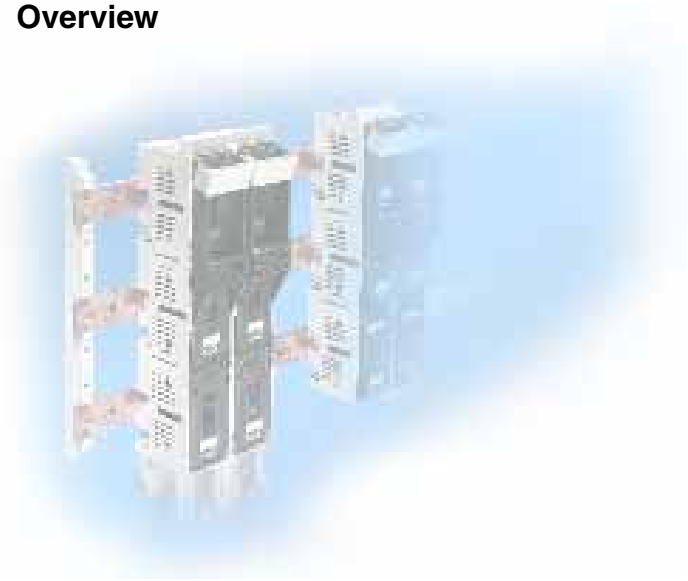
Busbar systems up to 1600 A (185 mm)

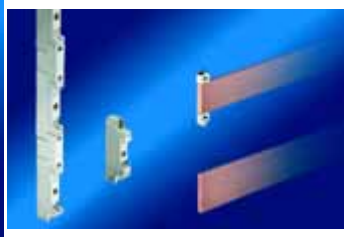
Overview



The busbar support with 185 mm bar centre distance is designed for the accommodation of bars 80 x 10 mm; by using inserts the cross-section may be reduced to 60/50 x 10 mm.

The special design of the busbar support facilitates seamless top mounting in the vicinity of the support. For this purpose, the isolator, bar and support are screwed together with a single screw.
In addition, the individual modules of the busbar support can also be used as single-pole supports.

System components



Busbar support
up to 1600 A, 3-pole

Inserts
for busbar supports

Busbars E-Cu

Busbar cover sections

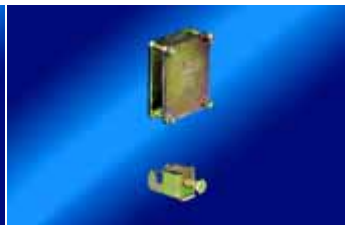


Plate clamps

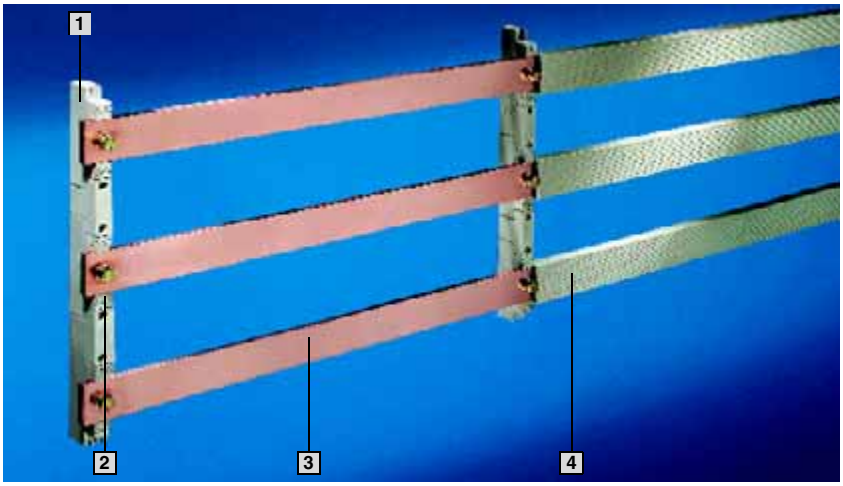
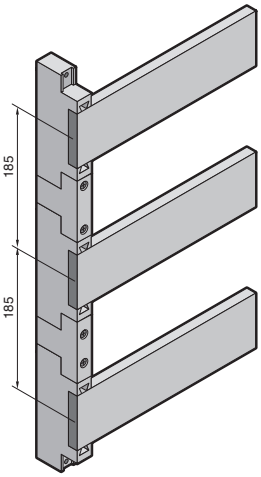
Conductor connection clamps

NH fused isolator, size 00
Included with the supply:
Single or double adaptor for mounting the NH strip on 185 mm bar systems

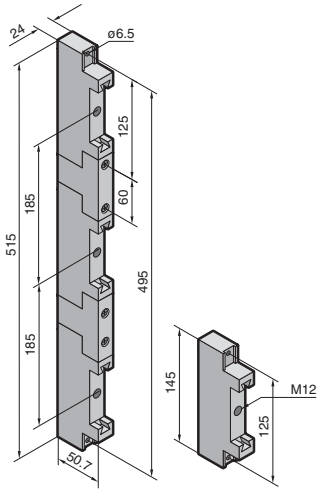
NH fused isolators, sizes 1 – 3
for direct mounting on 185 mm bar systems.

System components





Planning software Rittal SV Plan/ Power Plan,
see page 1061.



1 Busbar support

Material:
Fibreglass-reinforced, thermoplastic polyester (PBT).
Continuous operating temperature: max. 140°C.
Fire protection corresponding to UL 94-V0.

Note:
The base component of the busbar support may also be used as a single-pole support.

Short-circuit protection diagram,
see page 1126.

Technical information
for the calculation of rated currents,
see page 1137.

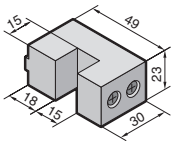
[1] Number of lamina x lamina width x lamina thickness
[2] The sum total of the ambient temperature and the temperature increase produces the resultant conductor temperature of the laminated flat copper bar.
Example:
SV 3565.000 loaded with 220 A, i.e. the temperature increases by 30 K. At an ambient temperature of 35°C, this produces a resultant conductor temperature of 35°C + 30 K = 65°C.



Universal support

For the attachment of laminated copper bars from 20 x 5 to 63 x 10 mm.

Material:
Fibreglass-reinforced, thermoplastic polyester (PBT).
Fire protection corresponding to UL 94-V0.

Supply includes:
Screws and “U” nuts for mounting on PS/TS mounting rails.

Packs of	Model No. SV
3	**3079.000**

Short-circuit protection diagram,
see page 1127.

Universal support

For the attachment of laminated copper bars from 40 x 5 to 100 x 10 mm.

Material:
Fibreglass-reinforced, thermoplastic polyester (PBT).
Fire protection corresponding to UL 94-V0.

Supply includes:
Screws and sliding nuts for attachment on C rails.

Packs of	Model No. SV
3 sets	**3079.010**

Accessories:

C rails 30/15,
see page 928.

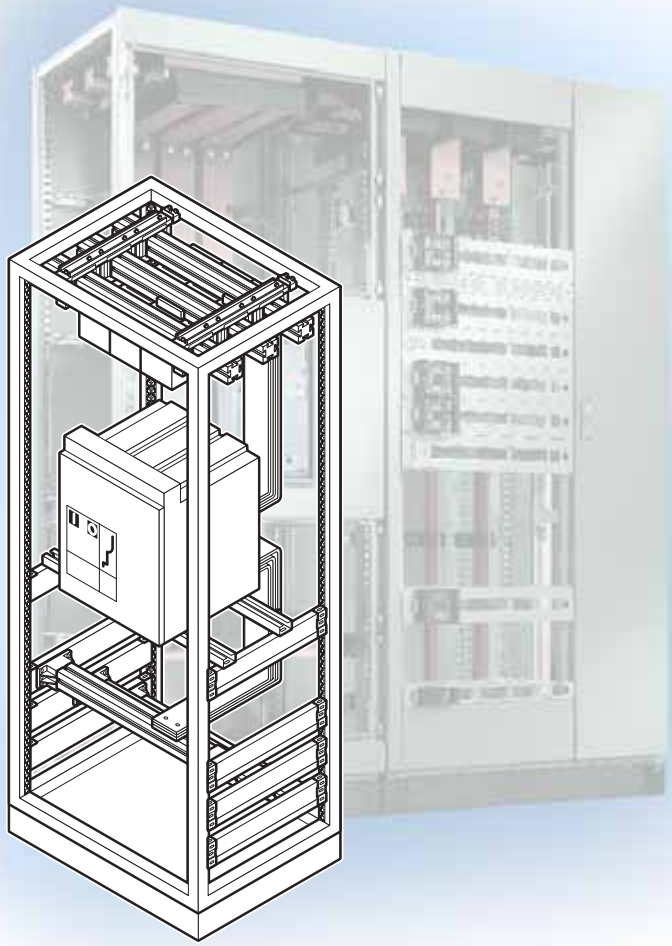
Overview, Rittal SV-TS 8 and Maxi-PLS



SV-TS 8 and Maxi-PLS – the ideal combination for low-voltage distributors and switchgear in the heavy current range. The system is assembled without any form of machining (such as sawing, drilling, bending etc.). As a result, this future-oriented, fully modular system offers new dimensions in fast assembly and safety.

The futuristic modular system

SV-TS 8 enclosures are fully prepared.
The enclosure frame is fully fitted with a three-piece gland plate, rear panel, roof and door or partial doors.
Punched sections without mounting flanges to accommodate the end supports and system support rails for the power circuit-breakers are fitted ready to install.

Standardised Maxi-PLS busbars with ingenious fastening technology
Thanks to the perfect system technology and customised pitch pattern, installation of Maxi-PLS supports and bars is precise-fit, simple and fast.
With the aid of sliding blocks or studs, the four attachment levels of the Maxi-PLS busbars permit infinitely variable attachment and contacting of round conductors, laminated flat copper and Maxi-PLS connection brackets and connection kits.

System packages for all commercially available power circuit-breakers.
Maxi-PLS busbars, in conjunction with the isolator chassis, U contact maker and connection brackets, form the heart of the modular system for connecting air circuit-breakers up to 3200 A with standard components.

The connection kits are precisely tailored to the respective power circuit-breakers.

Type testing to
EN 60 439-1/IEC 60 439-1
Special testing under accidental arcing conditions to EN 60 439-1, supplement 2/IEC 1641

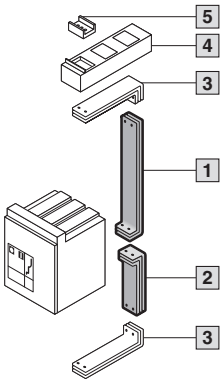
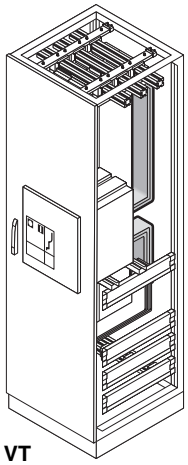
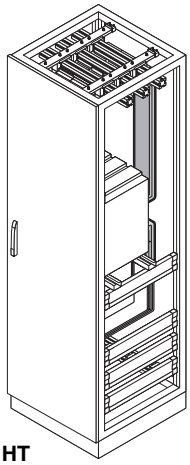
System concept
- All manual machining is eliminated
- Type testing of the system technology
- Compact busbar with four attachment levels; bar length tailored to the enclosure dimensions
- Standardised contact hazard protection

System benefits
- Increased productivity (easier project planning, no manual production of busbar connections and connection points, faster assembly)
- Compact configuration, easy access to all connection points

Connection kits (3-pole)







For installation in 600 mm deep and 2000 mm high enclosures. Recommended enclosure width 600 mm.

Correct selection should be made according to the following criteria:

- Make, size
- Rated current I_e
- Switch version either “static installation” or “rack-mounted”
- Position of the power circuit-breaker:
  VT = in door cutout
  HT = behind the door

1 Connection kit, top
2 Connection kit, bottom
3 Connection bracket
4 Isolator chassis
5 U contact maker

Note:
Technical modifications reserved.
Connection kits for other enclosure sizes or 4-pole systems available on request.

Extended
Extended delivery times.

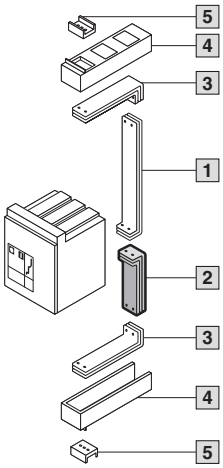
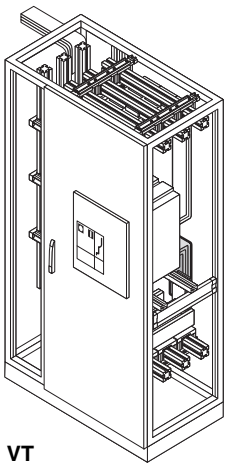
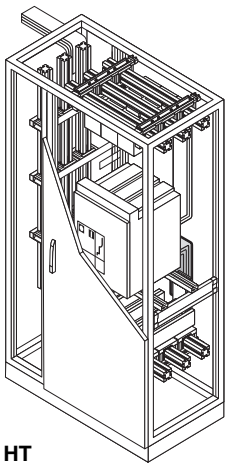
Connection kits for coupling sets (3-pole)







For installation in 600 mm deep and 2000 mm high enclosures. Recommended enclosure width 800 mm.

Correct selection should be made according to the following criteria:

- Make, size
- Rated current I_e
- Switch version either “static installation” or “rack-mounted”
- Position of the power circuit-breaker:
  VT = in door cutout
  HT = behind the door

1 Connection kit, top see page 368 and 369.

2 Connection kit, bottom for coupling set

3 Connection bracket

4 Isolator chassis

5 U contact maker

Note:
Technical modifications reserved.
Connection kits for other enclosure sizes or 4-pole systems available on request.

Delivery time:
Extended delivery times.

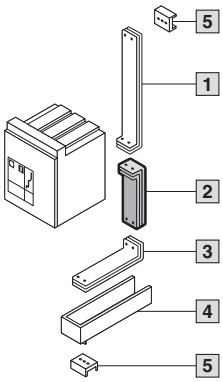
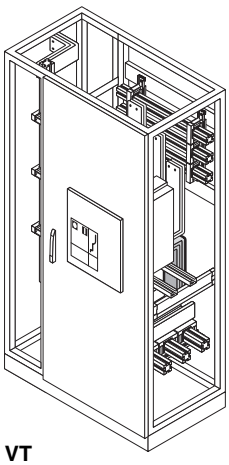
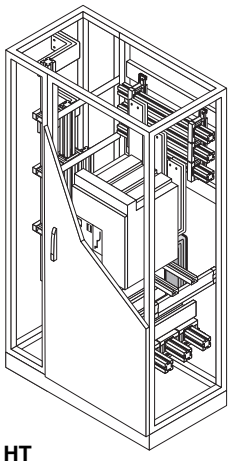
Connection kits for coupling sets – rear section (3-pole)





VT



HT

For installation in 600 mm deep and 2000 mm high enclosures. Recommended enclosure width 800 mm.

Correct selection should be made according to the following criteria:

- Make, size
- Rated current I_e
- Switch version either “static installation” or “rack-mounted”
- Position of the power circuit-breaker:
  VT = in door cutout
  HT = behind the door

1 Connection kit, top see page 368 and 369.

2 Connection kit, bottom for coupling set

3 Connection bracket

4 Isolator chassis

5 U contact maker

Note:
Technical modifications reserved.
Connection kits for other enclosure sizes or 4-pole systems available on request.

Delivery time:
Extended delivery times.

Connection kits (3-pole)

For installation in 600 mm deep and 2000 mm high enclosures. Recommended enclosure width 800 mm.

Correct selection should be made according to the following criteria:

- Make, size
- Rated current I_e
- Switch version either "static installation" or "rack-mounted"
- Position of the power circuit-breaker:
  VT = in door cutout
  HT = behind the door

1 Connection kit, top
2 Connection kit, bottom
3 Connection bracket
4 Isolator chassis
5 U contact maker

Note:
Technical modifications reserved.
Connection kits for other enclosure sizes or 4-pole systems available on request.

Delivery time:
Extended delivery times.

Connection kits for rear section (3-pole)

For installation in 600 mm deep and 2000 mm high enclosures. Recommended enclosure width 800 mm.

Correct selection should be made according to the following criteria:

- Make, size
- Rated current I_e
- Switch version either “static installation” or “rack-mounted”
- Position of the power circuit-breaker:
  VT = in door cutout
  HT = behind the door

1 Connection kit, top
2 Connection kit, bottom
3 Connection bracket
4 U contact maker

Note:
Technical modifications reserved.
Connection kits for other enclosure sizes or 4-pole systems available on request.

Delivery time:
Extended delivery times.

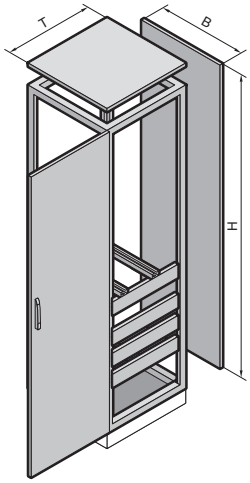
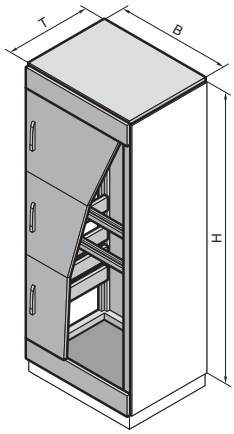
Rittal Maxi-PLS SV-TS 8 enclosures

for incoming/outgoing circuit





Pre-assembled for direct installation of power circuit-breakers

Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm

Surface finish:
Enclosure frame:
Dipcoat-primed
Door, roof and rear panel:
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame
with fitted punched section without mounting flange for Maxi-PLS end support attachment and fitted system support rails for power circuit-breaker attachment;
door(s), roof, rear panel,
gland plates (three-piece).

Detailed drawing,
see page 1140.

Technical information,
see page 1142.

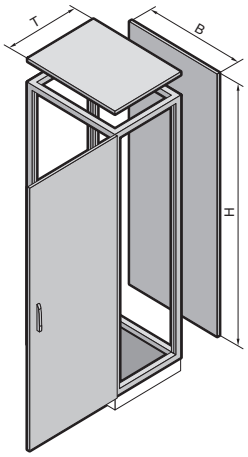
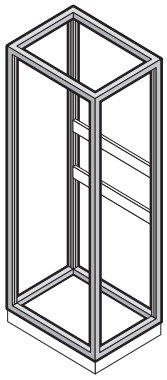
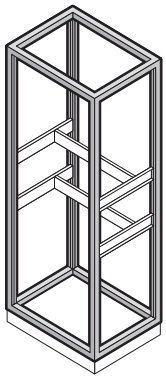
for Rittal NH fused isolators





1 Mounting in rear section



2 Mounting in centre section

Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm

Surface finish:
Enclosure frame:
Dipcoat-primed
Door, roof and rear panel:
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame, door(s), roof, rear panel, gland plates (three-piece), TS punched sections with mounting flanges.

Technical information,
see page 1143.

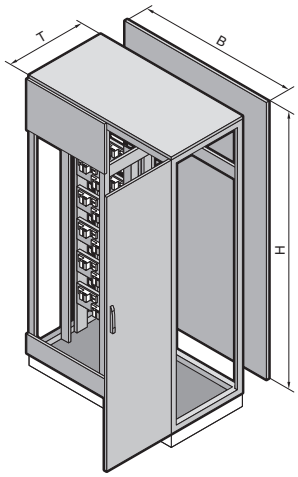
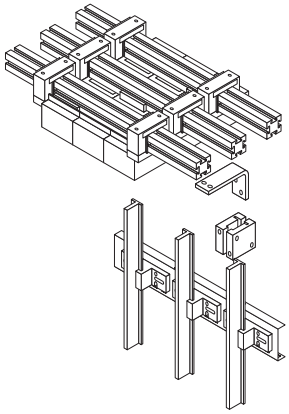
Rittal Maxi-PLS SV-TS 8 enclosures

for NH fused isolators





Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm

Surface finish:
Enclosure frame:
Dipcoat-primed
Door, roof and rear panel:
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame
with fitted support rails to accommodate the T-bar support;
Door, roof, rear panel, gland plates (three-piece).

Detailed drawing,
see page 1140.

System components for coupling sets

Coupling sets

vertical
For installation in 600/800 mm deep SV-TS 8 enclosures for coupling sets.

Coupling sets are selected according to the rated current I_e of the primary busbars to be coupled:
- Coupling set 2000 A:
  $I_e \leq 2000$ A
- Coupling set 3200 A:
  I_e 2000 A ≤ 3200 A

Supply includes:
3-pole
3 Maxi-PLS busbars E-Cu,
1 set of connection brackets E-Cu, top (L1 – L3),
1 set of connection brackets E-Cu, bottom (L1 – L3),
assembly parts.

4-pole
4 Maxi-PLS busbars E-Cu,
1 set of connection brackets E-Cu, top (L1 – L3, N),
1 set of connection brackets E-Cu, bottom (L1 – L3, N),
assembly parts.

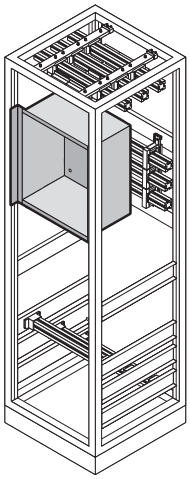
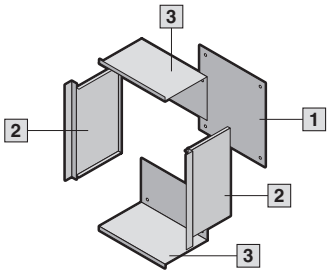
Device module





For use in power circuit breaker incoming/outgoing feeder panels with a minimum depth of 600 mm.
The removable mounting plate may be used for the configuration e.g. of fuses, power circuit-breakers and switchgear.

Material:
Side parts, centre parts:
Sheet steel, spray-finished in RAL 7035
Mounting plate:
Sheet steel, zinc-plated, passivated
Front panel:
Aluminium, anodised

Supply includes:
2 side parts,
2 centre parts,
connector parts,
mounting plate,
optional front panel.

1 Mounting plate
2 Side parts
3 Centre parts

Note:
Please observe the manufacturer-specific data regarding the arcing space of power circuit-breakers.

ISV distribution enclosure

up to 630 A/up to 1600 A

The “one-stop supplier” concept has distinct advantages. Easier planning and procurement with one partner, faster installation thanks to coordinated systems, and hence reduced labour and investment costs.

ISV-TS 8 enclosure system
- Bayable with all TS 8 enclosures of the same height and depth
- Pre-configured
- Flexible interior installation with the TS 8 enclosure accessories range, such as doors, lock systems, partial mounting plates, climate control components
- Optional door hinging on l/h or r/h side
- Suitable for component mounting as an incoming or outgoing feeder panel, depending on requirements
- Cable entry freely selectable depending on the enclosure configuration

ISV modules
- Pitch pattern 150 x 250 mm (H x W)
- Refined quick-fit assembly system facilitates precise positioning of the modules in the ISV-TS 8 enclosure
- Cover is prepared for a lead seal

ISV components
Fully configurable with Rittal components, such as
- NH fused isolators
- NH on-load isolators
- Bus-mounting fuse bases
- Connection components
- Optional busbar installation with SV busbar systems up to 1600 A (185 mm bar centre distance) or Rittal Maxi-PLS up to 2000 A

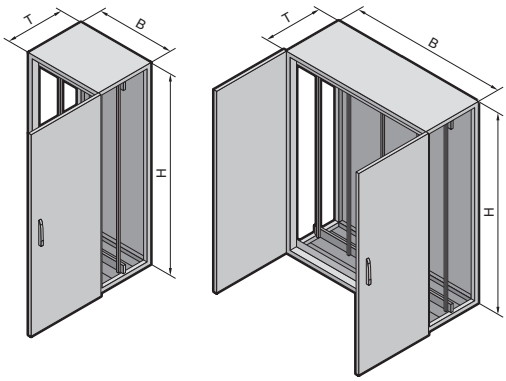
Systematic fast assembly

The ISV enclosure system, with its pre-configured mounting level, is perfectly prepared for mounting the installation modules.

The required modules may be screw-fastened directly to the mounting levels without any further accessories.

The matching contact hazard protection cover plates inside the enclosure guard against accidental contact with live parts.

ISV-TS 8 enclosures for distribution enclosures up to 630 A



Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm
Contact hazard protection frame: Hard PVC, RAL 9002

Surface finish:
Enclosure frame:
Dipcoat-primed
Roof, rear panel, door(s):
Dipcoat-primed,
powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame with mounting level,
door(s), roof, rear panel, gland plates (three-piece), contact hazard protection frame.

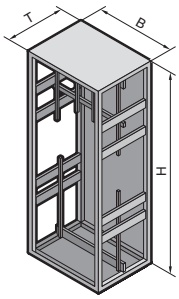
ISV distribution enclosure

ISV-TS 8 enclosures for distribution enclosures up to 1600 A



Material:
Sheet steel
Enclosure frame, roof, rear panel and gland plates: 1.5 mm
Door: 2.0 mm
Contact hazard protection frame: Hard PVC, RAL 9002

Surface finish:
Enclosure frame:
Dipcoat primed
Roof, rear panel, door:
Dipcoat primed,
powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame with mounting level,
door, roof, rear panel,
gland plates (three-piece),
contact hazard protection frame.

Note:
- For assembly and space reasons, a contact hazard protection module with 4 height units (600 mm) and 2 or 3 width units (500 or 750 mm), depending on the enclosure selection, is always required on the inlet or outlet side.
- When using Rittal NH fused isolators size 00 – 3, see page 353, care should be taken to ensure that for thermal reasons, a contact protection hazard module with at least 1 height unit (150 mm) is always fitted above the NH isolators.
- The contact hazard protection modules to cover the NH strips all round will need to be machined by the customer.

Detailed drawing,
see page 1148.

Power circuit-breaker modules

- Suitable for accommodating commercially available power circuit-breakers of brands ABB, Merlin Gerin, Moeller and Siemens in 3-pole versions, up to 630 A
- Cover is prepared for a lead seal
- Insulating material RAL 9002

Note:
The pitch patterns of holes for attachment of the power circuit-breakers and the corresponding cut-out dimensions for the covers are shown in the ISV assembly instructions.

Power circuit-breakers are not included with the supply.

Busbar support

- 5-pole, 60 mm bar centre distance

Note:

- Depending on the configuration and connection variant, the busbars must be cut to length prior to installation, in accordance with the ISV assembly instructions.
- 5-pole busbar variant only suitable for the configuration of busbar connections and NH bus-mounting on-load isolators, size 00.
- With bus-mounting fuse bases, only 3-pole configuration (L1/L2/L3) is supported. In such cases, N and PE must be configured via busbar support SV 3050.000 (see page 318) or busbar module (Model No. SV 9665.590 or SV 9665.600, see page 418).

Rittal Electronic Systems offer “complete know-how” in the field of electronic packaging at a high level – up to Level 4 integration.

For CPCI, VME and AdvancedTCA applications.

This means “plug & play” systems for **extremely high data throughput levels –** in telecommunications, in the network and server segment, in automation, in traffic guidance systems and in medical technology.

System solutions in a modern design, with **super-fast backplanes,** with **integral power modules** and with **effective climate control concepts.**

Features

ATCA – Advanced Telecom Computing Architecture –

The first cross-industry standard developed by the PICMG (PCI Industrial Computers Manufacturer Group) for telecommunications applications that were previously developed on a proprietary basis. ATCA – The solution for high demands in terms of system availability and performance, in both telecommunications and industrial automation, transport technology and medical technology. Rittal's product spectrum includes a range of complete systems in various designs with the corresponding accessories.

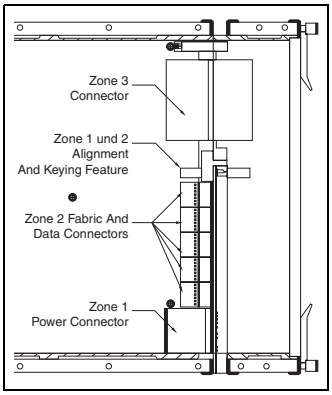
System benefits

AdvancedTCA™

- System availability of at least 99.999 %.
- Fail-safe maximised, thanks to redundancy
- Hot-swap capability ensures uninterrupted operation.
- Transfer rates of up to 2.5 Terabit/s.
- Large board formats: 8 U x 280 mm.
- Switched Fabric architecture.
- By reducing proprietary platforms, the high cost of development and training is eliminated.
- Available off the shelf.
- Specified heat losses up to 200 W per board.
- Support of different protocols (Ethernet, Infiniband, Rapid I/O, PCI-Express).
- Defined performance of up to 3.125 Gbit/sec.

The mechanical components ATCA Shelf (PICMG 3.0)

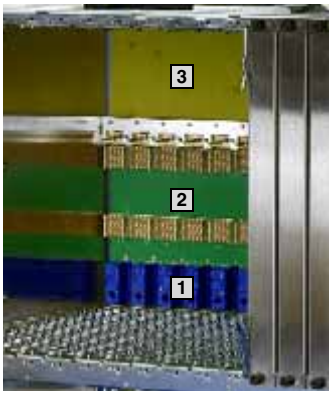
- 1 x system rack (mechanical)
- 1 x backplane (Switched Fabric)
- 1 x backplane (electrical distribution)
- 4 x fans
- 2 x or 4 x 48 V power entry modules (PEM)
- Installation space for 2 x Shelf Management Controllers
- Installation space for 2 x PC controllers
- A shelf has either 14 or 16 slots.
- A shelf with 14 slots is based on 482.6 mm (19″).
- A shelf with 16 slots is based on 23″ or ETSI.
- The height of a shelf is N x U (19″/23″) or N x 25 mm (ETSI).
- The depth of a shelf is 385 mm and is suitable for installation in 600 mm deep enclosures.



Boards

- Dimensions according to IEC 60297-3 and specifications to PICMG 3.0.
- The front boards (8 U x 6 HP and 280 mm depth) contain the electronic functions and the connectors. They are offset from the pitch line by 6.61 mm and are 1.6 to 2.4 mm thick, have an ESD clip on the component side 1, and attachment holes for the cover of component side 2. Essentially, a board type plug-in unit consists of a front panel with centering pin, EMC seal, ESD clip, injector/extractor handles with optional microswitch operation for hot swap, and optional M3-knurled screws.

  A cover is obligatory for component side 2 (rear) to reinforce the PCB and/or for EMC protection.
- Rear I/O boards (RTM): 8 U x 6 HP x 70 mm



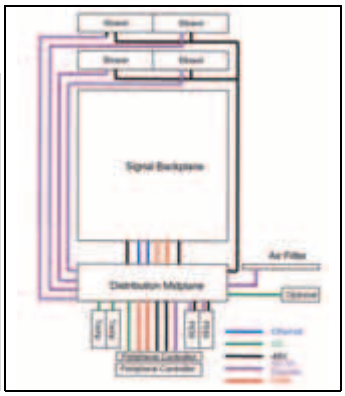
Connector zones

Zone 1:
Power supply and system management

Zone 2:
Data communication

Zone 3:
RTM (rear I/O)

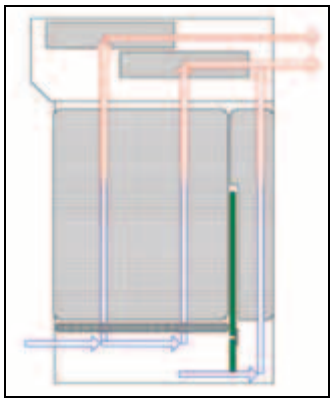
Zone 1 and Zone 2 are equipped with a special centering/keying device.



Shelf management

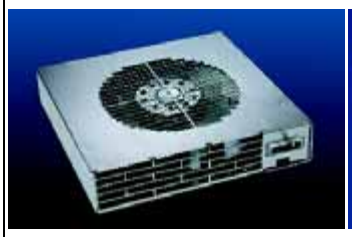
Interfaces for the monitoring and control of:

- Boards
- PEMs (power entry modules)
- Fan
- Air inlet temperature
- Remote alarm signals
- Air filter available/ not available

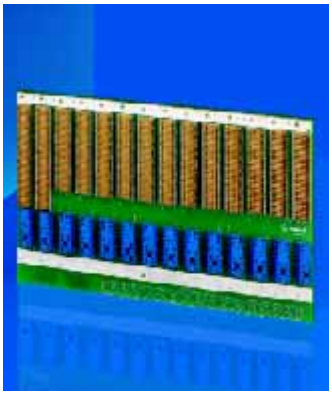


Side view, right

Shelf cooling



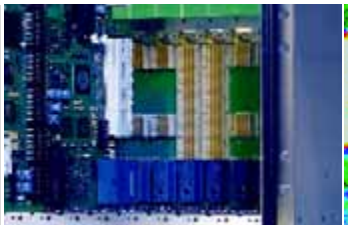
- ATCA specifies heat losses of up to 200 W per front board and 30 W per rear board, which translates into approximately 3 kW for a fully configured shelf with 14 boards.
- The four high-capacity RiCool fans from Rittal with 300 m^3/h ensure optimum climatic conditions.
- Redundancy and hot-swap ensure reliability, even in the event of a fan failure.
- Replaceable dust filter in the air inlet zone.

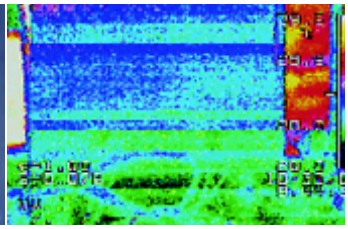


Backplanes

3 times higher performance!

- Full Mesh backplane from Rittal with 10 Gbit/sec. (acc. to PICMG 3.x, 3.125 Gbit/sec. is required).





- Dual Intelligent Platform Management Interface (IPMI), bussed or radial.
- Product range: Full Mesh, Dual Star, Dual Dual Star also optionally available with additional Mesh performance.

- Thermal image of a Rittal backplane under full load. The red zone at the top is attributable to resistive loads.

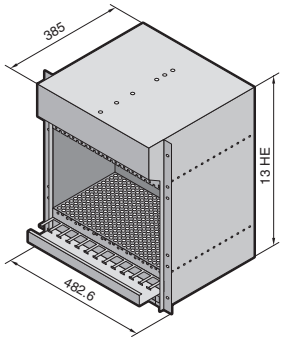
AdvancedTCA solutions from Rittal

As a competent supplier of Electronic Packaging Solutions, Rittal and its subsidiary Kaparel have been actively involved in development of the AdvancedTCA standard.

This knowledge and experience is incorporated into product development. Rittal offers complete solutions for ATCA applications. Upon request, these may also be tailored to specific requirements. There is a particular emphasis on the area of heat management.

Complex solutions, from direct cooling of the board via the shelf through to the enclosure, provide reliability, even with extreme requirements.

AdvancedTCA Shelf Version VA-1 (Rittal ShMC)



HE = U

Technical specifications:
- 482.6 mm (19″) x 13 U x 385 mm deep
- 14 x 6 HP slots for front boards and RTM
- 14 slot backplanes with bussed IPMI
- 2 or 4 x PEM connected at the rear
- Prepared for 2 x rear connected Rittal ShMC
- Rear connected PC (2 x)
- Space for rear telecom service connection
- RiCool fan connected at the front (4 fans each with 180 cfm/300 m³/h, dual IPMI, dual 48 V)
- Filter frame connected at the front (with air baffle plate and filter mat)
- Zone 3 air seal (14 x 6 HP – slot-based)
- Optional cable ducts for front and rear

ShMC:
The choice of backplane depends on the Shelf Management Controller (ShMC) used. The function of the chosen ShMC determines the function of the peripheral controller (PC).

PEM:
Depending on the application, different types of Power Entry Modules (PEMs) are available. At least two (@ 90 A) are required, and up to a maximum of four (@ 50 A) may be used

Detailed drawing,
see page 1149/1150.

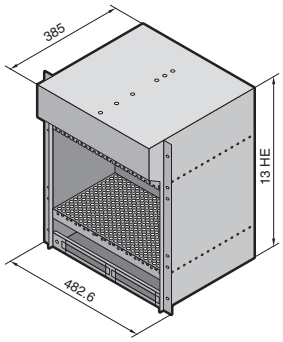
AdvancedTCA Shelf Version VB-1/VB-2



HE = U

Technical specifications:
Version VB-1 (Intel/ShMC)
- 482.6 mm (19″) x 13 U x 385 mm deep
- 14 x 6 HP slots for front boards and RTM
- 14 slot backplanes with radial IPMI
- 2 or 4 x PEM connected at the rear
- Prepared for 2 x front connectable Intel ShMC
- Rear connected PC (2 x)
- Space for rear telecom service connection
- RiCool fan connected at the front (4 fans each with 180 cfm/300 m³/h, dual IPMI, dual 48 V)
- Filter frame connected at the front (with air baffle plate and filter mat)
- Zone 3 air seal (14 x 6 HP – slot-based)
- Optional cable ducts for front and rear

Technical specifications:
Version VB-2 (PigeonPoint ShMC)
- 482.6 mm (19″) x 13 U x 385 mm deep
- 14 x 6 HP slots for front boards and RTM
- 14 slot backplanes with bussed IPMI
- 2 or 4 x PEM connected at the rear
- Prepared for 2 x rear connectable PigeonPoint ShMC
- Rear connected PC (2 x)
- Space for rear telecom service connection
- RiCool fan connected at the front (4 fans each with 180 cfm/300 m³/h, dual IPMI, dual 48 V)
- Filter frame connected at the front (with air baffle plate and filter mat)
- Zone 3 air seal (14 x 6 HP – slot-based)
- Optional cable ducts for front and rear

AdvancedTCA backplanes

- 4, 14, 16 slot version
- Dual Star, Full Mesh
- Meets AdvancedTCA specification Version 1.0
- Other versions available on request

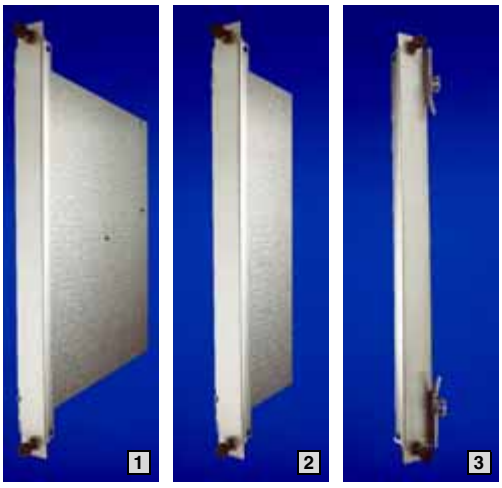
Description	Number of slots	Model No. RP
Triple Full Mesh with bussed IPMI	4	**3688.760**
1 Full Mesh with bussed IPMI	14	**3688.763**
Dual Star with bussed IPMI	14	**3688.307**
Full Mesh with bussed IPMI	16	**3688.317**
Dual Star with bussed IPMI	16	**3688.429**

Face plates, filler panels, handles

A complete customer-specific range of face plates and filler panels is available and offers individual cutouts, screen printing or coating on request, together with a range of handle types, including lock and microswitch actuation. The face plates and filler panels are optionally available with stick-on or snap-on EMC seals. The lock device of the handle also serves as earthing and guarantees a secure hold, even in earthquake zone 4 (NEBS level 3).

The AdvancedTCA face plates and filler panels may be used both for the front boards and for the RTMs (Rear Translation Modules). For the front board, the obligatory cover of component side 2 is integrated into the front panel design. An air management version for front slots or RTM is available for Zone 3.

- Every face plate has two locks.
- Injector/extractor handles, assembly parts and EMC seals must be ordered separately.
- The face plates are deigned for the I/O interface.
- The filler panels are used on unused or reserved slots and offer EMC protection and airflow management.
- The AdvancedTCA face plate with 6 HP is defined in PICMG 3.0.
- I/O units requiring a connection to the chassis ground should be connected via the front panel alignment/ground pin.



Face plate

1 Front, with cover for component side 2

2 Rear, with cover for component side 2

3 Front/rear, without cover for component side 2

Rack-mount systems for CPCI and VMEbus

Features

Rittal supplies complete plug-and-play solutions for VME and CompactPCI applications at a high level – up to Level 4 integration. The systems are supplied complete with power supply, backplane, measures for EMC and ESD protection, as well as climate control. Fully assembled, pre-wired and tested.

Individually customised to your requirements.

Systems for CompactPCI

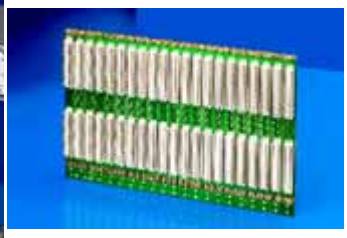
- Systems for the configuration of industrial computers to CompactPCI specifications
- Complies with IEC 60 297-3 and IEEE 1101.1/10/11 as well as CompactPCI Spec. Rev. 1.0 (PICMG)

Backplanes
High-speed CompactPCI backplanes. Optionally with H.110 bus and bridges for extension.

Power supplies in various output categories, plug-in or open frame.

PICMG EUROPE

Systems for VMEbus



- Systems for the configuration of industrial computers to VME specifications
- Complies with IEC 60 297-3 as well as IEEE 1101.1/ 1101.10 and 1101.11

Backplanes
High-speed backplanes to VME/ VME64x specifications.

Power supplies in various output categories, plug-in or open frame.

Design features

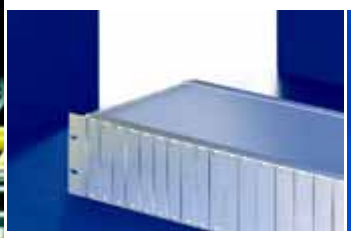
Side panels and flanges
of aluminium, clear-chromated.

10 mm pitch pattern of holes
in the side panels allows individual system configuration.

Horizontal rails with 10 mm extension for injector/extractor handles.

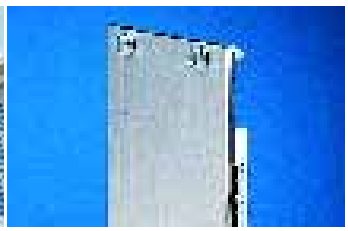
Features

EMC measures



Conductive surface finish of all system components.

EMC gaskets of stainless steel make contact with the individual components.



U-shaped EMC front panels with EMC gaskets ensure reliable contact.

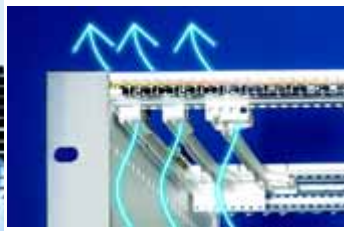
Safety and ESD protection

Keyable guide rails for the installation of keys.

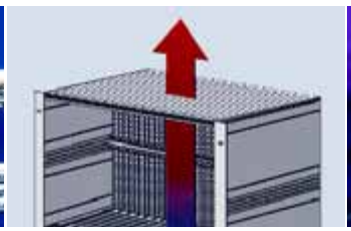
Potential equalisation
ESD pin and ESD clip in the guide rail to discharge static charges before making contact with the board type plug-in unit.

ESD clip in the guide rail ensures permanent direct discharge from the PCB.

Climate control



Maximum air flow, thanks to the narrow design of the guide rails and horizontal rails.

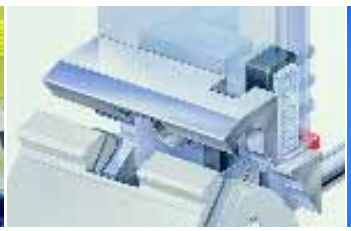


Individual air flow management ensures targeted air routing and optimum heat dissipation. Optionally from bottom to top or from front to rear.

High-performance RiCool fan ensures optimum ventilation. 1 U, hot swap-compatible 204 m^3/h, including speed control and fault alarm signal.

System configuration

Injector/extractor handles to reliably overcome high insertion/extraction forces.

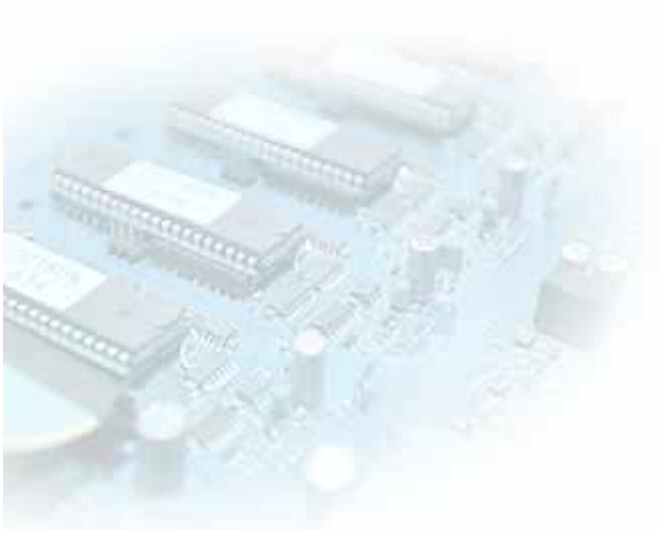


Live insertion
Microswitches in the injector/extractor handles inactivate the hot-swap circuitry.

Keyable, red guide rails for defined positioning of the CPU.

Rack-mount systems for CPCI and VMEbus

Features

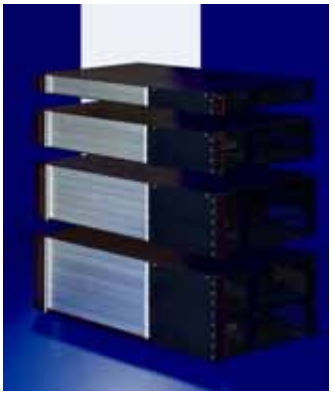


The 300 mm deep Slim-Box enclosures are designed for the horizontal installation of CPCI/VME boards.

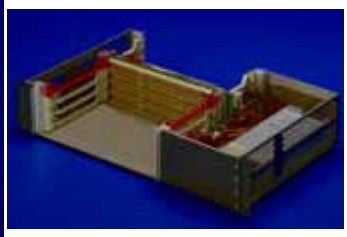
The technical features offered by the enclosures are truly impressive: 2 slots per U front and rear, excellent heat dissipation from left to right thanks to fans in the side panel, and a Monolithic backplane.

Depending on the design, including one ATX power supply or prepared for installation of a plug-in power supply.

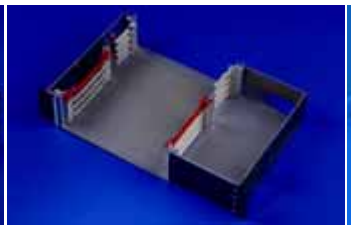
Slim-Box with VME backplane, see page 447.



Slim-Box rack-mount systems 1, 2, 3, 4 U



Version 1:
with backplane and ATX power supply or . . .

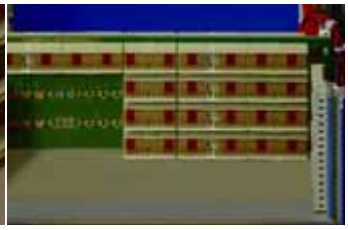


Version 2:
without backplane with ATX power supply for individual configuration or . . .

Version 3:
with backplane (from 2 U with H. 110) and prepared for installation of a plug-in power supply (accessory).

2 slots per U for CPCI/ VME boards at the front and rear.

Keyable plastic guide rail.



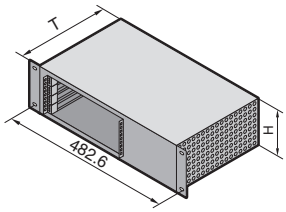
VME or CPCI backplane,
some with H. 110 (Version 3).

Integral ATX power supply
(Version 1, 2).

Optional plug-in power supply
hot swap-compatible
(Version 3).

DC fan in the side panel for optimum horizontal ventilation.

Rack-mount system, Slim-Box 1 U, 2 U, 3 U, 4 U



Technical specifications:
- Rack-mount housing 482.6 mm (19″) for the horizontal installation of boards
- Front and rear 2 slots per U for CPCI boards
- Enclosure cooling from left to right
- EMC and ESD-compatible design
- Including fan:
  for 1 U: 12 V DC, 21 m^3/h
  for 2 U: 12 V DC, 74 m^3/h
  for 3 U: 12 V DC, 195 m^3/h or 74 m^3/h,
  for 4 U: 12 V DC, 74 m^3/h
- Conforms to IEEE 1101.1/10/11, CompactPCI Spec. 2.0

Material:
Sheet steel, spray-finished

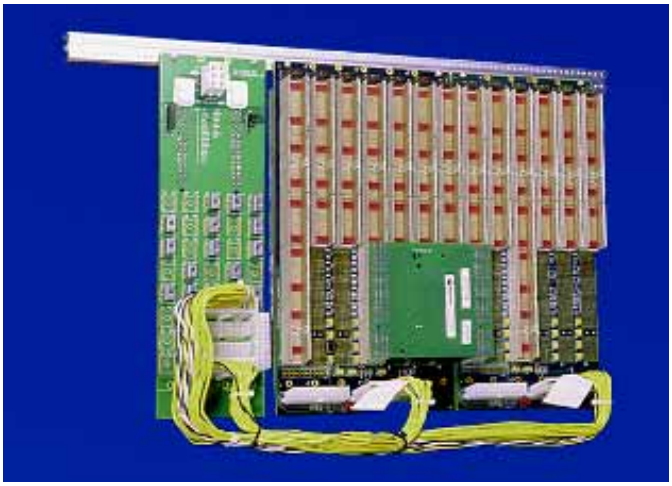
Backplanes, technical specifications



Rittal offers an extensive range of powerful backplanes for CompactPCI.

- Modular assembly facilitates expansion up to a maximum of 21 slots
- Connection between the individual segments via CPCI or H.110 bridge modules
- Voltage supply via ATX-compatible connector
- Additional 2 x 3 Mate-N-Lock connector for 48 V with H.110 backplane
- Optional development of customer-specific Monolithic backplanes
- 8 layer multi-layer
- System slot on right (left upon request)

Modular assembly

The Ripac backplanes in 32 or 64-bit versions allow the configuration of CPCI systems from 2 to 21 slots. This is possible thanks to the modular design of the backplanes and connection of the individual segments via CPCI or H.110 bridge modules. Each backplane segment contains between 2 and 8 slots and operates in stand-alone mode in conjunction with a CPU board and a power supply unit.

For assembling larger systems, several segments may be joined together via PCI bridge modules fitted at the rear. In such cases, only one of the segments will run in the system slot with a CPU board. The remaining segments will have a subordinate status without CPU boards. However, the first slot on the right of the backplane is available for a standard 32 or 64 bit CompactPCI host CPU.

Technical specifications

CPU slot
A single 3 U or 6 U CPU board with 32 or 64 bits is required for each system. The system slot on the right-hand side ensures that 2-slot or wider system boards do not conceal other slots, thus rendering them unusable.

Available slots
Each backplane contains two to eight 3 U or 6 U slots (32 or 64 bit).

Data transfer rate
132/264 Mbytes for 32/64-bit version
+5 V, 33 MHz PCI bus interface
264/512 Mbytes for 32/64-bit version
+3.3 V, 66 MHz (max. 5 slots) PCI bus interface

PCI bridges
Single backplanes do not require bridges. For each additional backplane, however, a bridge fitted at the rear is required.

Power supply
Voltage supply via one or more ATX connectors.

Control connector
Each backplane has a control connector at which +3.3, +5, ±12 V voltages can be picked off, e.g. for the connection of power LEDs.

I/O modules for J3 – J5
I/O modules can be connected at the rear of each slot.

Standards
- PCI 2.1 (PCI specification)
- PICMG 2.0 (CompactPCI spec.)
- PICMG 2.1 (hot swap spec.)
- IEEE 1101.1, mechanical system
- IEEE 1101.10, mechanical system
- IEEE 1101.11, mechanical system

32-bit and 64-bit backplane – Technical specifications:
The CPCI specifications define both 32-bit and 64-bit versions. Both versions may be implemented on a 3 U daughterboard. However, the 32-bit version allows the complete P2/J2 connector to be used for user-defined I/O signals (slots 2 – 8). Slot 1 (system slot) uses separate P2/J2 pins for functions such as clock, arbitration, (grant/requests) and other system functions. These pins are printed in bold in the table. In 32-bit systems the P2/J2 connection may optionally be populated at the rear with 16 mm long pins and a transfer frame. Signals can be picked off or I/O boards connected at the rear.

64-bit CompactPCI pin assignments – Technical specifications:
With the 64-bit CompactPCI, both P1 and P2 connectors are fully assigned with signals. User-defined I/O signal pins are not available. I/O signals are only available with 6 U boards on connectors P3, P4 and P5.

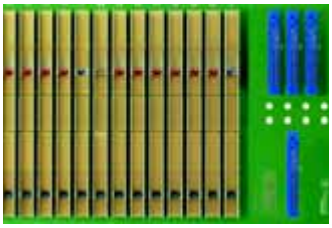
PFSO#-PFS1#	= busses for power fail sense
KEY AREA	= area utilized for key



Backplanes 7 U, Switch Fabric to PICMG 2.16

The “Switch Fabric” backplanes comply with PICMG specification 2.16. They support telephony applications and systems with a high level of availability in which CompactPCI is combined with Ethernet for high-speed applications.

Power inlets	Positronic 47-pole, or ATX
CPU slot	right
Standards	PCI 2.1 (PCI specification) PICMG 2.0 (CompactPCI) PICMG 2.1 (hot swap) PICMG 2.5 (CPCI Computer Telephony) IEEE 1101.1/10/11 PICMG 2.16
Installation height	7 U (6 U for RP 3686.396 and RP 3689.186)
Distance between slots	4 HP
Operating temperature range	0° – 70°C
Relative humidity	90 %, non-condensing
Geographic addressing	Yes

Material:
Fibreglass epoxy to IEC 60 249 (type FR4)

Supply includes:
Backplane, fully populated.

Technical specifications:
- 7 U, 84 HP/32 HP
- Complies with PICMG 2.1, fully hot swap-compatible
- Selectable voltage V (I/O) (3.3 V or 5 V) where configured for 33 MHz CompactPCI
- Integral Schottky diode bus terminator
- Prepared for up to four backplane reinforcements to avoid bending during card insertion
- H.110 CT bus complies with specification PICMG 2.5 at all node slots.
- Supports 8 HP CPU boards when one node slot is relinquished
- Twin redundant support for Switch Fabric (2 fabric and 12 basic nodes), as specified in PICMG 2.16
- Supports rear transition modules with all board slots
- Configurable for power supply with either two 6 U x 8 HP, three 6 U x 4 HP, three 3 U x 4 HP, three 3 U x 8 HP or four 3 U x 4 HP
- All power supply slots conform to PICMG 2.11
- Power supply connectors for H.110-Vbat, -SELVbat and VRG power signals
- ATX power connector for auxiliary power inlet/outlet
- Two fan power connectors for 12 V and system management support
- System control bus (SMBus) conforms to PICMG 2.9 and supports all boards, power supplies, power entry modules, fans and alarm cards
- Support of I^2C bridge function on the alarm card for >19 SMBus nodes

Modular CPCI bridge

CPCI bridge may be connected to the rear to extend the bus by a maximum of 7 additional slots. The CPCI bridge handles all communications between the individual bus segments. The front slots are freely available for CPCI boards. It supports the 64-bit PCI bus and may be used in conjunction with CPCI backplanes 3.5 U and 6.5 U.

Technical specifications:

- May be connected at the rear on CPCI backplanes
- PCI bridge
- 64 bit “high performance” Intel 21 154
- For use with all Rittal CPCI backplanes (not with low profile backplanes)
- Corresponding to PCI specifications 2.1
- Conforms to CPCI
- CPCI bridge connects CPCI backplanes from right to left (as viewed from the front) – i.e. the “left-hand” connector accommodates the host board

Material:
Fibreglass epoxy to IEC 60 249 (FR4)

Supply includes:
Bridge, fully populated.

2

Modular low profile bridge

CPCI bridge may be connected to the rear to extend the bus by a maximum of 7 additional slots, **without any loss of slots:** Optionally available as a 32-bit or 64-bit version. Only suitable for use in conjunction with low profile backplanes.

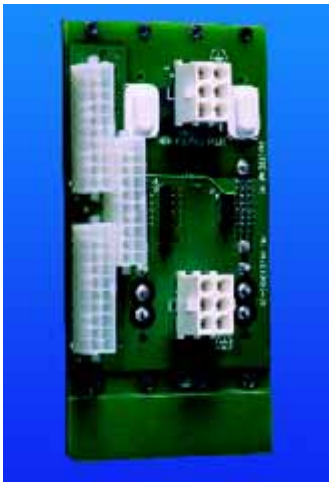
Material:
Fibreglass epoxy to IEC 60 249 (FR4)

Supply includes:
Bridge, fully populated.

1 32-bit version

2 64-bit version

Version	Bits	Model No. RP
left-right	32	**3689.210**
right-left	32	**3689.211**
left-right	64	**9810.637**
right-left	64	**9812.625**



Power supply backplane 3.5 U

- Board 3.5 U, 16 HP
- For use in conjunction with Rittal CPCI backplanes
- Accommodation of up to two power supplies with up to 250 W
- AC/DC connection is via two 2 x 3-pole connectors
- Output voltages to supply one or more CPCI backplanes are available at 3 ATX-compatible connectors
- Complies with PICMG 2.0, PICMG 2.11

Technical specifications:
Accommodation of 2 x 3 U, 8 HP CPCI power supplies with up to 250 W.

The second power supply unit may be used for redundancy (with power distribution) or, via parallel connection, to increase the current.

Input voltages:
- AC input via 2 x 3-pole AMP Mate-N-Lock (AMP # 350732-1), connector J12
- Connected via pin 45, 46, 47, type Positronic
- Maximum current load per pin is 25 A, matching counter-connector for cable harness AMP # 350715
- DC input via 2 x 3-pole AMP Mate-N-Lock (AMP # 350732-1), connector J5 connected through pin 46, 47, type Positronic
- Maximum current load per pin is 25 A, matching counter-connector for cable harness AMP # 350715

Output voltage:
- Three 20-pole ATX-compatible connectors for ATX cable harness (connection of power supply board to CPCI backplane)

Description	Model No. RP
Board for plug-in power supply with Positronic connector, 47-pin	**3688.603**
ATX (12″) cable harness	**9810.337**
ATX (16″) cable harness	**3686.570**
ATX (20″) cable harness	**9810.338**

Material:
Fibreglass epoxy to IEC 60 249 (FR4)

Supply includes:
Board, fully populated.

Note:
Plug-in power supplies for CPCI available on request,
see page 481.

Power supply backplane 6.5 U, 8 HP

- Board 6.5 U, 8 HP
- For use in conjunction with Rittal CPCI backplanes 3.5 U, 6.5 U, H.110
- Accommodation of a power supply with up to 500 W
- AC/DC connection is made via 3-pole connectors
- Output voltages to supply one or more CPCI backplanes are available at 3 ATX-compatible connectors or at special power terminals

Technical specifications:
Accommodation of a 6 U CPCI power supply with up to 500 W.

Input voltages:
- AC input via 3-pole AMP Mate-N-Lock connector
  Max. current load per pin 25 A
- DC input via 3-pole AMP Mate-N-Lock connector
  Max. current load per pin 25 A

Output voltage:
- Three 20-pole ATX-compatible connectors for ATX cable harness (connection of power supply board to CPCI backplane) and/or special power terminals

HE = U

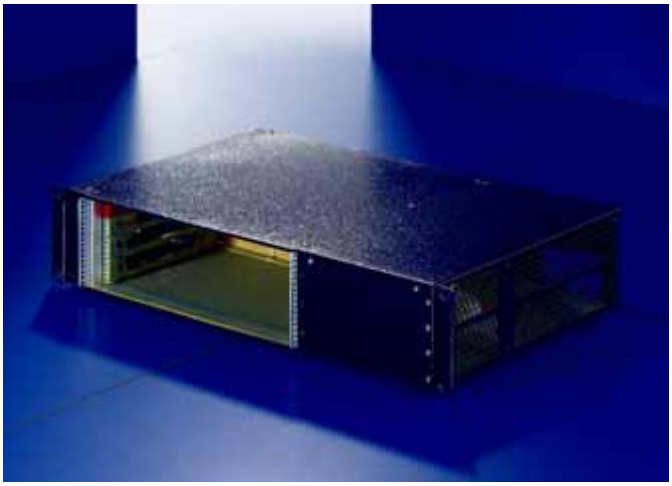
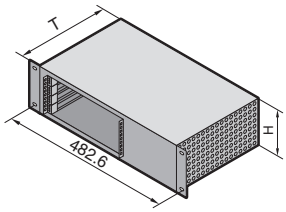
Rack-mount systems, Slim-Box 1 U, 2 U, 3 U, 4 U





Technical specifications:
- Rack-mount housing 482.6 mm (19″) for the horizontal installation of boards
- Front and rear 2 slots per U for VME boards
- Enclosure cooling from left to right
- EMC and ESD-compatible design
- Including fan:
  for 1 U: 12 V DC, 21 m^3/h
  for 2 U: 12 V DC, 74 m^3/h
  for 3 U: 12 V DC, 195 m^3/h or 74 m^3/h,
  for 4 U: 12 V DC, 74 m^3/h
- Conforms to IEEE 1101.1/10/11, ANSI/VITA 1014, IEC 821

Material:
Sheet steel, spray-finished

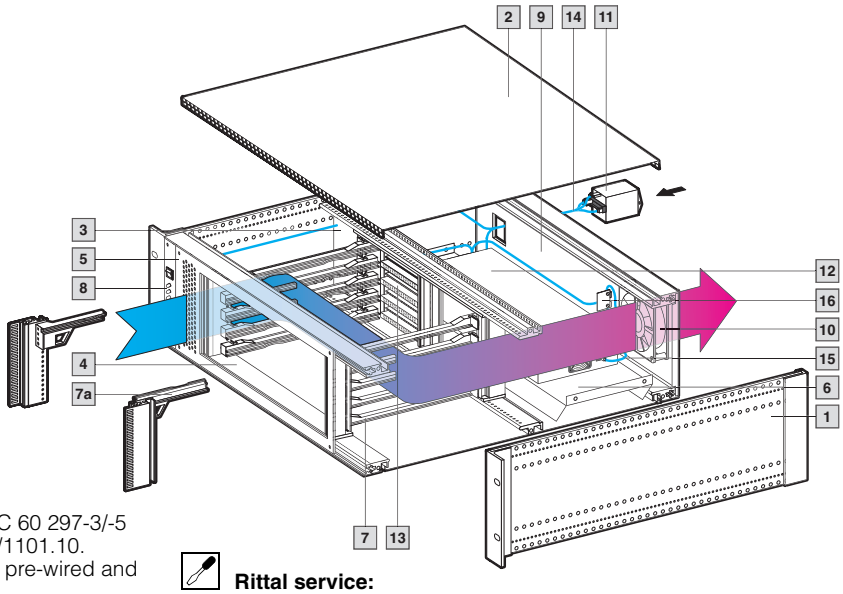
Rack-mount systems, Ripac 3 U, 5 slots/4 U, 7 slots horizontal



Technical specifications:
Subrack, 405 mm deep, for installation in 482.6 mm (19″) enclosures or cases. Prepared to accommodate VMEbus boards and drives.

Complies with IEC 60 297-3/-5 and IEEE 1101.1/1101.10. Fully assembled, pre-wired and tested.

Rittal service:

Modifications or individual system solutions can be provided at short notice.

Rittal's system specialists will assist you with planning and configuration.

General technical specifications – VMEbus

The VMEbus, based on standard IEEE 1014 and IEC 821, has become established worldwide as an industry standard.
The VME64 represents an extension of the VME family to ANSI/VITA 1-1994 and supports 64-bit data traffic. The VME64x extends the VME family to ANSI/VITA 1.1-1997 and is available with the optional 133-pole 2 mm connector J0. 160-pole connectors are used with VME64x. This system remains backward compatible, so that assemblies with 96-pole connectors to IEC 60 603-2 may still be used. All Rittal VMEbus boards are of a **HIGHSPEED-DESIGN.** Minimal reflections are achieved, due to even surge impedance of the signal track. Consistent shielding of every signal trace guarantees minimal feedback, and therefore ensures uninterrupted operation even in 64 bit mode with the **2e protocol** (160 Mbyte/s).

Daisy-chain circuit

With the daisy-chain circuit, a distinction is made between manual daisy-chaining and automatic daisy-chaining. Automatic daisy-chaining renders the connection of jumpers superfluous, and users are saved the time-consuming task of insertion and extraction. What is more, possible misconnections are avoided. Automatic daisy-chaining can be achieved in two ways. Rittal VMEbuses are generally supplied with automatic daisy-chaining.

Termination

In order to avoid malfunctions on signal tracks that may arise as a result of reflections on the exposed track end, these must be terminated with the VMEbus. Termination may be either ON-/IN-board (on the backplane) or OFF-board (external). With regard to the type of termination, a distinction is made between passive and active termination. The benefit of active termination lies in the lower closed-circuit current consumption. Passive termination is distinguished by superior frequency response and a broader temperature range.

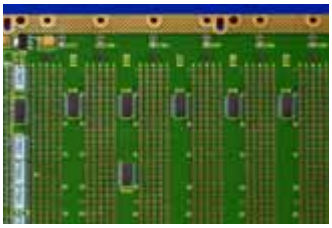
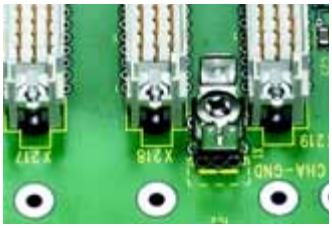
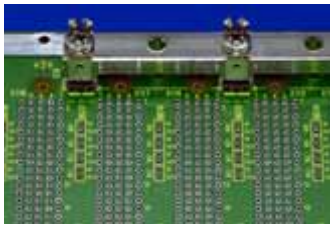
Automatic daisy chaining J1 and J1/J2
Via the use of connectors with integral mechanical switches, the contact is automatically opened when the daughter-board is inserted, and closed again when it is extracted.



Automatic daisy chaining VME64x
The second option for automatic daisy chaining is achieved here by an “or” logic integrated onto the backplane. If the daughter-board is extracted, the logic closes the daisy chain.



Chassis GND connection
An electrically conductive chassis GND surface is attached to the subracks in the mounting section of the backplane. This facilitates EMC-sealed mounting of the backplane in the subracks. With VME64x, subracks and system earth are linked in RF terms by capacitors (10nF, 200 V on each slot). Static charges are discharged via a resistor (≥ 1 MΩ). A combined connection component (screw M4 and Faston 2.8 or 6.3 x 0.8 mm) is provided for connection of the enclosure earth.



Power connections
Infeed of the main operating voltage +5 V/+3.3 V and GND is provided via busbars with M6 screw terminal. The auxiliary operating voltages are supplied via double Fastons with additional M4 screw thread. Optimum supply of the daughter-boards and hence problem-free operation is ensured, thanks to the arrangement of the infeed modules on the backplane.

Utility connector
The special signals to the power pack and to external LEDs are routed on a separate connector on the backplanes.

Depending on the backplane type, a 7-pole, a 10-pole or a 14-pole connector with 2.54 mm spacing is provided.

Backplanes VME64x

Technical specifications:

Number of layers	10
Layer structure	Optimised for optimum RF performance. Outer layers designed as shielding surface.
PCB thickness	4.3 mm
Ohmic resistance of the signal tracks	< 1.5 Ohm
Surge impedance Z of the signal tracks	50 Ohm
Basic power consumption, terminated at both ends	Active: < 0.1 A
Power supply: – Busbar with M6 screw terminal – M4 screw terminal and FASTON 6.3 x 0.8 mm – < 5 slots	 x x FASTON 6.3 x 0.8 mm
Current carrying capacity of busbar	200 A
Current carrying capacity of a combined Double flat-pin connector/screw terminal	25 A
Current carrying capacity of a FASTON flat connector	10 A
Current carrying capacity of the assembly, per slot	+3.3 V 12.5 A +12 V 9.0 A –12 V 1.5 A +5 VSTDBY 1.5 A +48 V (38 – 75 V) 3.0 A
Termination ON-/IN-board	active
Installation height	6 U/6.5 U
Distance between slots	4 HP
Connectors	Press-fit technique quality class 2, 400 connection cycles 160 pins compatible with C96 Optional J0, style 2 mm, 95/133 pins
Operating temperature range	Active termination 0°... +70°C
Relative humidity	90 %, non-condensing

Mains switch

- Rocker switch 6 A/250 V, 2-pole, FASTON connections (4.7 x 0.8 mm)
- VDE, UL, CSA, TÜV, SEMKO, DEMCO, SEV, NEMKO, SETI, BEAB approvals
- Isolation resistance: > 10 MΩ
- Test voltage: 1 kV
- Frame: 21 x 15 mm
- Cutout: 19.2 x 12.9 mm
- Installation depth: 17 mm

Max. current	Packs of	Model No. RP
6 A	1	**3687.711**

Connection cable

for power supply,
see page 771.

EMC front panel

with LED and mains switch
Front panel with switch module and display board with LEDs.

Supply includes:
EMC front panel 5 HP,
Rocker switch,
Display board with LEDs:
+3.3 V/+5 V/+12 V/–12 V/fan failure,
assembly parts.

For	LED version	Model No. RP	
		3 U	4 U
CPCI/ VME 64x	+3.3 V +5 V ±12 V Alarm	**3687.712**	**3687.714**
VME	+5 V ±12 V Alarm	**3687.713**	**3687.715**

Filter module

for DC fan with fault monitoring
The filter module serves to suppress interference on the +12 V power supply. In addition, a signal is generated in the event of a fan failure or significant drop below the nominal speed (displayed via the LED display board).

- Max. current of fan: 700 mA at an operating voltage of 12 V DC.

Supply includes:
Board with 2 screw terminals.

Packs of	Model No. RP
1	**3687.716**

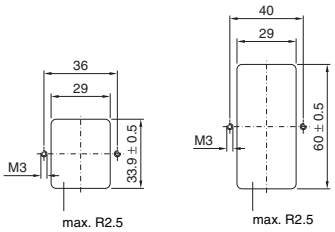
Accessories

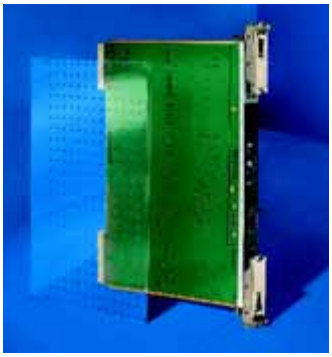
Filtered IEC mains inlet

Combination module consisting of IEC 320 socket, line filter and 5 x 20 mm fuse holder to IEC 320 and IEC 950.

Technical specifications:
Metal enclosure for screw mounting
Mains input: via IEC 320 socket
Mains output: via 3 FASTON contacts (L, N, PE, 6.3 x 0.8)
Versions with or without switches
Temperature range: – 25°C to +85°C

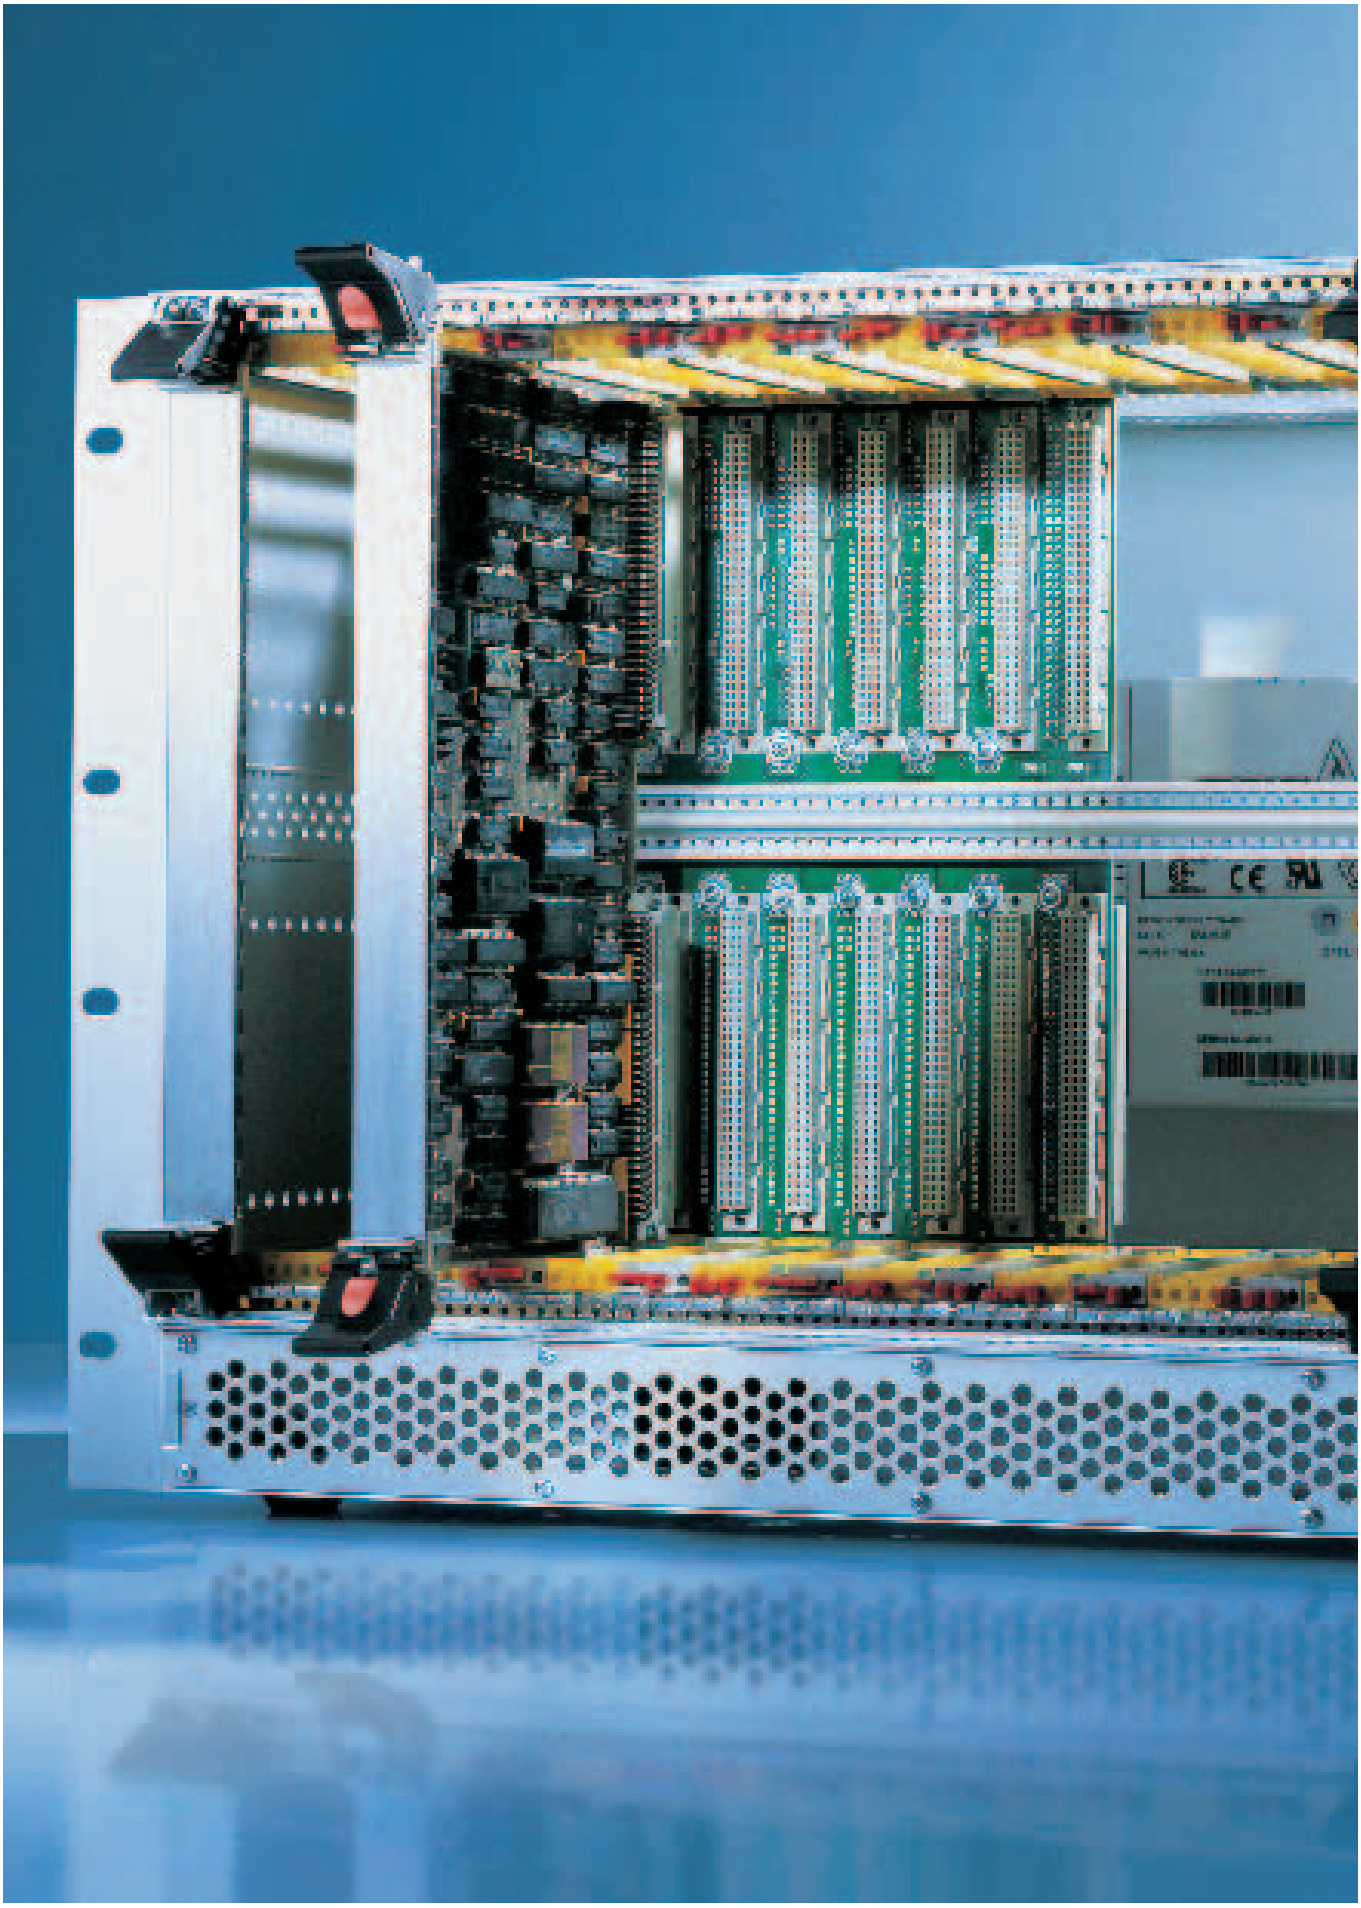
	Model No. RP	
	with switch	without switch
	3687.709	**3687.710**
Mains voltage max.	250 V AC	250 V AC
Leakage current	2 x 0.32 mA	≤ 500 µA
Max. current	6 A	6 A
Mounting holes	40 mm	36 mm
Installation depth	90 mm	56 mm
Cutout	60 x 29 mm	33.9 x 29 mm
Approvals	VDE, SEMKO, SEV, UL, CSA	VDE





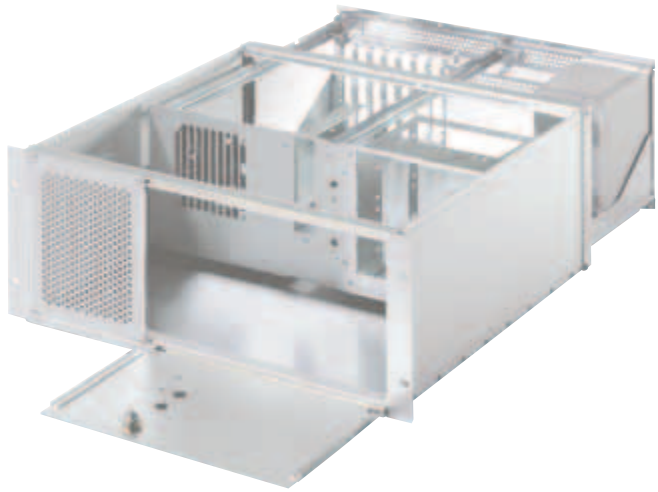
Plastic covers

for PCBs,
see page 531.



Rack-mount systems for industrial PCs and storage devices

Features



We offer an extensive range of products for industrial PCs to the ATX standard, from 482.6 mm (19″) rack-mount versions in 1, 2 and 4 U, through to solutions for direct mounting on mounting plates.

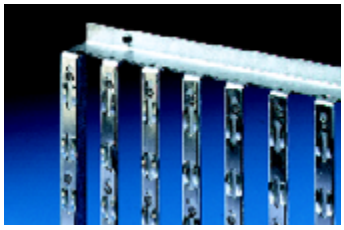
Shown opposite is a version with pull-out inner housing and electronics for automatic restart following a mains failure.

ATX Ripac, aluminium

The top-of-the-range model with outstanding maintenance-friendliness: The inner housing can be pulled out like a drawer.

Enclosure body of clear chromated aluminium, conductive.

Horizontally hinged, lockable front panel offers rapid access to drives and control components, as well as protecting against unauthorised access.



EMC gaskets – for unused slot covers – and conductive attachment of the motherboard.

Option of externally mounting 3 x 5¼″ and 1 x 3½″ drives for internal installation. Drive covers (accessory) for unused positions.

Integral electronics for automatic restart following a mains failure.

ATX 1, 2 U, sheet steel

The space-saving solution, e.g. in the server segment. The neutral design blends in well with other components.

Includes riser card for 1 slot or 2 slots.

Drive installation (1 and 2 U): Installation of 1 x 5¼″ and 1 x 3½″ drives.

Features

ATX 4 U, sheet steel

Lockable front panel protects against unauthorised access.

Slide rail mounting with no loss of height, due to reduced side panel height.

Unpainted contact points ensure reliable contact.

AT/ATX (Vario) Economy with front door

ATX Economy: Fully assembled and prewired.
AT/ATX Vario Economy: the basic case for individual installation and self-assembly.

Enclosure made from sheet steel zinc-plated/spray-finished, for demanding requirements in terms of stability and safety.

Easy removal of the drive module for external population.

ATX with front connections

As a 482.6 mm (19″) version for mounting in the enclosure, or for mounting directly onto the **mounting plate**.

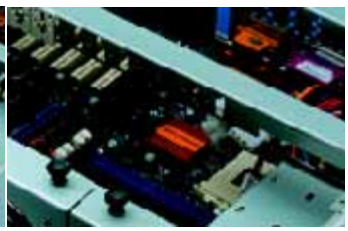
I/O connections at the front guarantee access from the front and flexibility, e.g. with minimal space available for connections to other systems.

Rear panel with cutout for PS/2 power pack.

Systems for storage devices

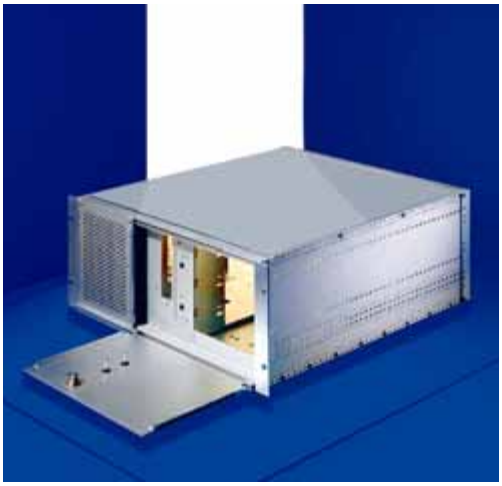
Protection under tough conditions is afforded by Rittal RAID systems, available in three variants. An optional ATX board may be installed.

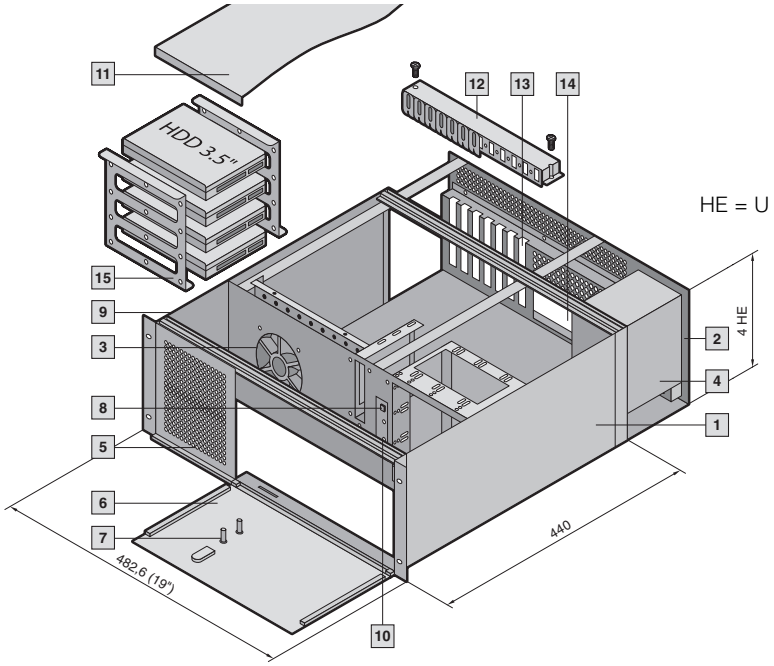
Fan inside (ATX 9-drive)



Optional **installation** of an ATX board with 6-drive and 9-drive version.

ATX Ripac 4 U, aluminium





Technical specifications:
482.6 mm (19″) rack-mount system for the installation of ATX/ Mini-ATX or Micro-ATX boards and 3 x 5¼″ and 1 x 3½″ drives.
Width: 482.6 mm (19″)
Height: 4 U (177.0 mm)
Overall depth: 440 mm.
EMC prepared.

Material/surface finish:
Side panels, front panels: Aluminium, clear-chromated
Cover:
1.0 mm aluminium, clear-chromated
Rack-mounted PC frame: Sheet steel, zinc-plated, passivated

Standards:
Complies with IEC 60 297-3 and ATX specification 2.01

Special designs available on request.

Supply includes:

1 Rack-mount system 4 U, including drive module
2 Rack-mounted PC frame
3 1 fan 120 mm with filter
4 ATX power pack 300 W (Technical specifications, see RP 3688.129, page 483)
5 Front door, horizontally hinged
6 Front door, horizontally hinged, lockable
7 LED displays
8 Reset button
9 EMC gaskets, all round
10 ON/OFF switch with electronics for automatic restart following a mains failure (activation/deactivation of the electronics via jumper)

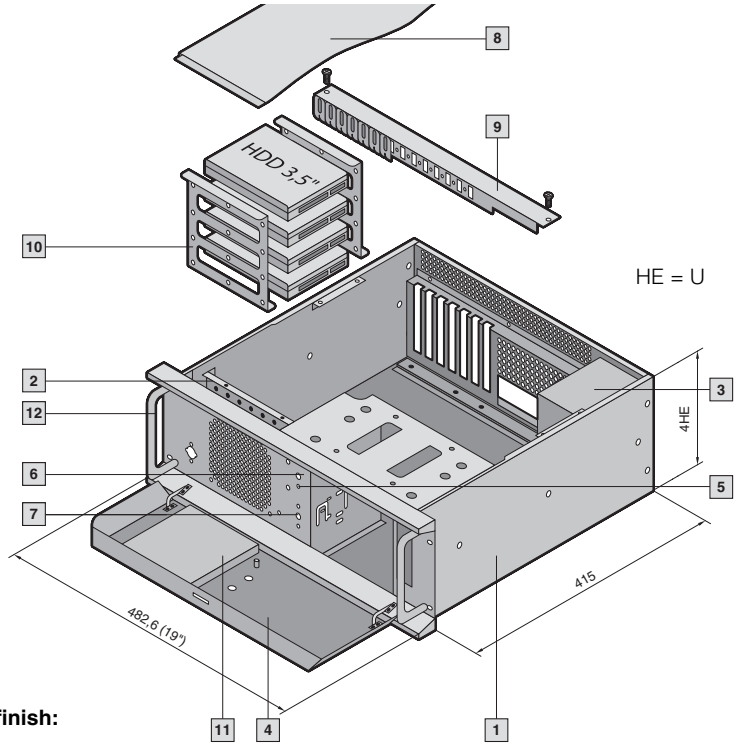
ATX Economy with front door, 4 U, sheet steel



Technical specifications:
482.6 mm (19″) rack-mount system for the installation of ATX/ Mini-ATX or Micro-ATX boards and 3 x 5¼″ and 1 x 3½″ drives.
Width: 482.6 mm (19″)
Height: 4 U (177.0 mm)
Overall depth: 430 mm.
EMC prepared.

Material/surface finish:
Case, cover:
1.2 mm sheet steel, zinc-plated, passivated
Front door: 1.2 mm sheet steel, spray-finished in RAL 7035, unpainted contact points

Standards:
Complies with IEC 60 297-3 and ATX specification 2.01

Special designs available on request.

Supply includes:

1 Rack-mount system 4 U, including drive module
2 1 x 120 mm fan and filter mat
3 ATX power pack 300 W (Technical specifications, see RP 3688.121, page 483)
4 Front door, horizontally hinged, lockable
5 LED displays, speakers
6 Reset button
7 On/off switch
8 Cover

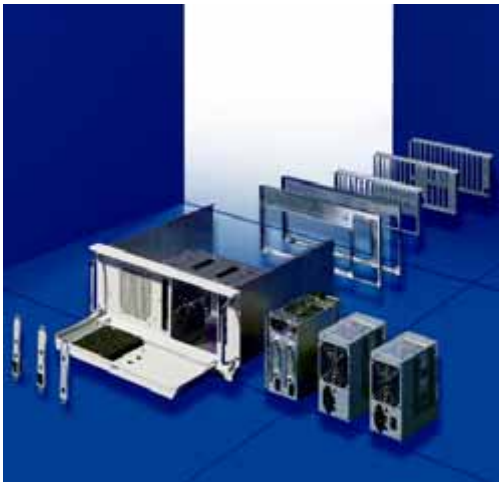
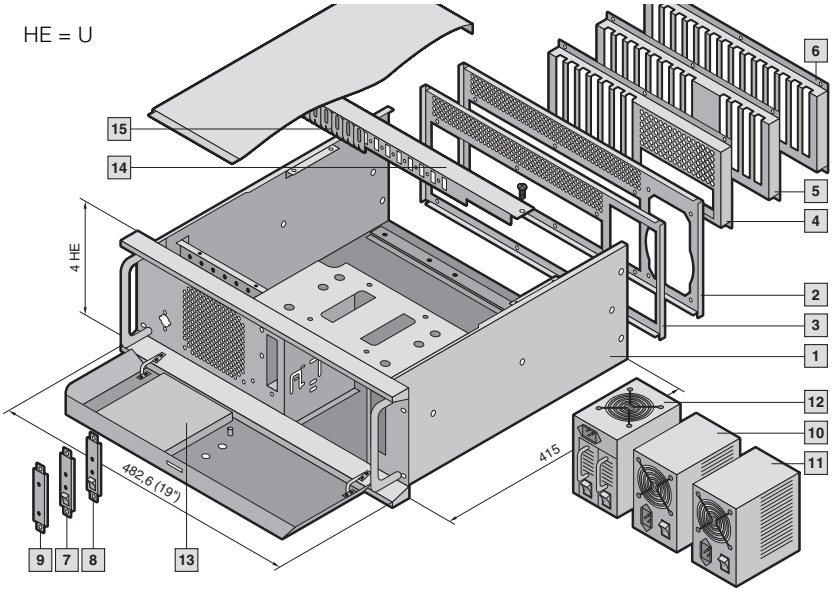
Modular system AT/ATX Vario Economy with front door, 4 U, sheet steel





The modular principle of AT/ATX Vario Economy allows installation to accommodate individual requirements. The basic case may be fitted for both AT and ATX applications with the appropriate selection of rear panels, power packs and front trim panels. For self-assembly, or on request fully assembled and wired.

Technical specifications:
19″ rack-mount system for the installation of ATX/Mini-ATX, Micro-ATX boards or AT/Baby-AT boards as well as 3 x 5¼″ and 1 x 3½″ drives.
Width: 482.6 mm (19″)
Height: 4 U (177.0/174.0 mm)
Overall depth: 430 mm.

Material/surface finish:
Case, cover:
1.2 mm sheet steel, zinc-plated, passivated
Front door: 1.2 mm sheet steel, spray-finished in RAL 7035, unpainted contact points

Standards:
Complies with IEC 60 297-3 and ATX specification 2.01

Special designs available on request.

Basic enclosure supply includes:

1 Case 4 U, 430 mm deep including assembly parts, covers, drive holder, fan, horizontally hinged front door, and air filter.

Note:
Rear panel, front trim panel and power pack should be ordered separately (for self-assembly).

Accessories

Unused slot cover

Screw-on cover to conceal slot cutouts which are not required.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. RP
5	**3659.030**

Cover for drives

To conceal the $3^1/_2$″ or $5^1/_4$″ drive slots.

Material:
Sheet steel, zinc-plated/spray-finished in RAL 7035

Supply includes:
Assembly parts.

Version	Packs of	Model No. RP
$3^1/_2$″	1	**3659.410**
$5^1/_4$″	1	**3659.110**

For ATX Ripac

Version	Packs of	Model No. RP
$5^1/_4$″	1	**3659.050**

Telescopic slides

Facilitate optimum accessibility to the units, even when built-in.
For up to a maximum enclosure width of 426 mm.

Load capacity:
30 kg

Material:
Sheet steel

Supply includes:
1 set = 2 telescopic slides, installation kit, assembly parts.

For enclosure depth mm	Maximum extension mm	Model No. RP
600	511.2	**3659.180**
800	596.4	**3659.190**

Note:
May only be fitted in conjunction with L-shaped 482.6 mm (19″) sections!

Front handles

The handles are fitted onto the 482.6 mm (19″) flange. They allow easy withdrawal of the cases from the enclosure.

Material:
Sheet steel, plated

Supply includes:
Assembly parts.

For enclosure height (U)	Packs of	Model No. RP
1	2	**3659.540**
2	2	**3659.020**
4	2	**3659.240**

Drive support

The drive supports will additionally accommodate a maximum of 4 additional $3^1/_2$″ hard disks. They are mounted inside the enclosure behind the fan.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For system	Packs of	Model No. RP
ATX Economy	1 set	**3659.230**
ATX Ripac	1 set	**3659.060**

Accessories

Card retainer

For secure attachment and stabilisation of slot cards up to 327 mm depth. The card retainers are height-adjustable so that even cards of different heights may be securely attached.
A mounting bar is needed to fit the card retainer (already included with ATX Ripac).

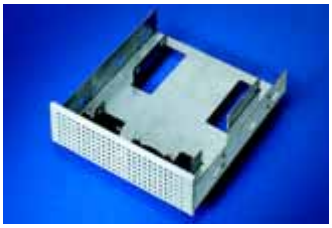
Material:
Card retainer: Plastic
Mounting bar: Sheet steel, zinc-plated, passivated

Card retainer

Packs of	Model No. RP
7	**3659.010**

Mounting bar

Packs of	Model No. RP
1	**3659.090**



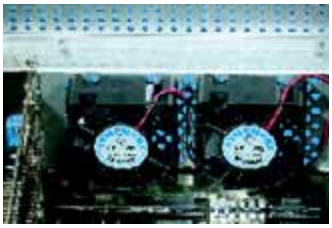
Adaptor

For the installation of $3^1/_2$″ hard disks or floppies in $5^1/_4$″ installation slots.

Material:
Sheet steel, zinc-plated,
Front panel spray-finished in RAL 7035.

Supply includes:
Assembly parts.

Version	Packs of	Model No. RP
for $3^1/_2$″ hard disk	1	**3659.270**
for $3^1/_2$″ floppy	1	**3659.280**

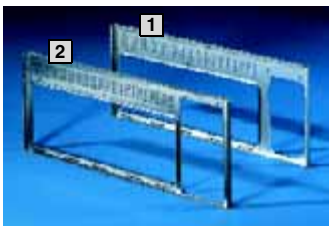


DC fan for rear panel

Fan 12 V DC, 60 mm, for mounting on the rear panel. Including two 4-pole connectors with terminal.

Supply includes:
2 fans with connection cable, including assembly parts.

Packs of	Model No. RP
2	**3659.250**



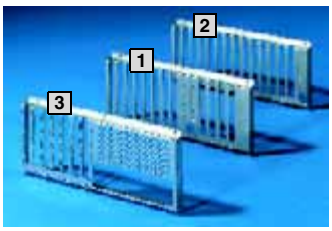
Rear panels

For the installation of AT/ATX Economy. Optionally with cutout for AT/ATX power pack or redundant power pack.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Version	Packs of	Model No. RP
1 for AT/ATX power pack PS/2	1	**3659.290**
2 for redundant power pack PS/2	1	**3659.310**



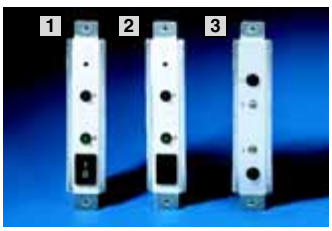
Slotted rear panels

For the installation of AT/ATX Economy. Mounted on the rear panels. Optionally for AT (8 + 4 or 14 slots) or ATX (7 slots).

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Version	Packs of	Model No. RP
1 AT 4 + 8 slots	1	**3659.330**
2 AT 14 slots	1	**3659.340**
3 ATX 7 slots	1	**3659.320**



Front trim panels

For the installation of AT/ATX Economy. Mounted in the front of the enclosure.

Optionally for:
- AT (2 x LED, reset button)
- ATX (2 x LED, reset button)
- ATX (2 x LED, reset button), electronics for automatic restart following mains failure

Version	Packs of	Model No. RP
1 AT	1	**3659.360**
2 ATX	1	**3659.350**
3 ATX (with electronics)	1	**3659.370**

Rack-mount systems for industrial PCs and storage devices

Power supply units

Features

Rittal offers an extensive range of power supply units in various designs.

The range includes 482.6 mm (19″) compatible, as well as Open Frame version or PS/2 variants as well as power supplies to supply DC voltage to controllers, systems and plant in many different areas.

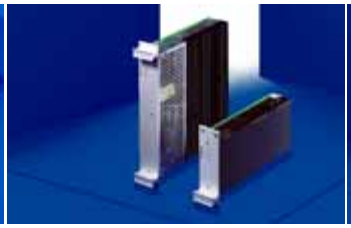
Open Frame (VME)

250/600/400/1000 W

Design features
- Open frame design
- Mounting on mounting base or enclosure rear panel
- Fan cooled
- Wide-range input
- Aluminium enclosure
- 3 outputs

User benefits
- Minimal space requirements with a high power output
- Universal applications
- Approvals: EN 60 950, UL 1950, IEC 950 and CSA 22.2 No. 234

3 U, 6 U (VME)



130/160/270 W, plug-in, integral VMEbus signalling

Design features
- 482.6 mm (19″) module to IEC 60 297-3
- Mounting in the subrack with the aid of plastic guide rails
- Connection via connectors H15, IEC 60 603-2 (DIN 41 612)
- 3 outputs

User benefits
- 482.6 mm (19″) compatible
- Hot swappable
- Approvals: EN 60 950, VDE 0805 and IEC 950

3 U, 6 U (CPCI)

175/200/250/350 W, plug-in

Design features
- 482.6 mm (19″) module to IEC 60 297-3
- Mounting in the subrack with the aid of plastic guide rails
- Positronic connector 47-pole PICMG 2.9
- 4 outputs

User benefits
- 482.6 (19″) compatible
- Hot swappable
- Approvals: EN 60 950 A1 – A4, CSA 22.2, UL 1950, C
- PICMG specification

PS/2 (AT/ATX)

250/300/400 W
Power supply units for ATX and CPCI systems

Design features
- Open frame design
- Mounting on a mounting plate or subrack rear panel
- Integral fan
- Sheet steel enclosure
- PFC active or passive
- Optional redundant versions

User benefits
- Universal applications
- Approvals: CSA

UPS

Uninterruptible power supply for installation in a 5¼″ drive bays. Guarantees power supply in the event of a mains failure (6 minutes).

Design features
- Installation in 1 or 2 standard 5¼″ drive holders
- Integral batteries

User benefits
- Minimal space requirements
- Approvals: CE, EN 60 950

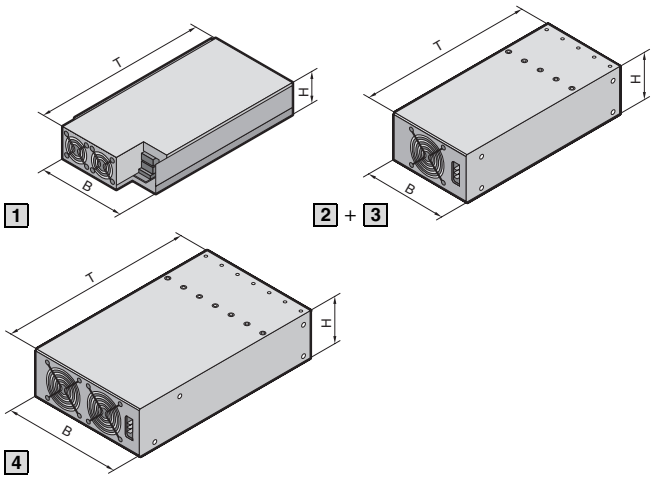
Redundant

2 x 300 W power supplies for RAID or ATX.

Design features
- Hot-swap version
- PFC active

User benefits
- Universal applications
- Hot swap-compatible

Ripac power supplies – Open Frame



Note:
Power supply 1000 W:
48 V DC input on request.

Detailed drawing,
see page 1151 – 1152.

CPCI power supplies, uninterruptible power supply

CPCI power supply

Open Frame 400 watts

- Wide-range input (90 – 253 V AC)
- Power factor to EN 61 000-3-2
- Radio interference suppression to EN 55 022, curve B
- Immunity to interference to EN 61 000-4-2/4/5 Level 3 (formerly IEC 801-2/4/5)
- Quick installation due to “Fast On” connectors (approx. 30 sec.)
- Tested to EN 60 950, UL 1950 and CSA 22.2 No. 234

Technical specifications:
400 W max.
3.3 V/25 A
5.0 V/25 A
12.0 V/8 A
–12.0 V/7 A

Height mm	Width mm	Depth mm	Model No. RP
126	63	279	**3687.695**

CPCI power supply

Plug-type, 180 watts

- Module, 3 U, 12 HP, plug-in
- Connector M24/8/DIN 41612
- Automatic changeover 120/230 V AC
- All outputs permanently short-circuit resistant
- SELV outputs to EN 60 950
- Overvoltage protection on the primary and secondary circuits
- Overtemperature protection
- Control inputs: ENABLE, INHIBIT
- Signal output: DERATE
- EMC standards EN 50 081-1 and EN 50 082-2
- EN 60 950/VDE 0805-SELV, protection category I, VDE 0100

Technical specifications:
180 W max.
5.1 V/20 A
3.3 V/14 A
12.0 V/2 A
–12.0 V/1 A

Detailed data specification sheet available on request.

Height U	Width HP	Model No. RP	
		Power supply	Front panel for power supply
3	12	**3686.682**	**3685.330**

Accessories:

Female connector type M24/8,
see page 485.
Female connector type H15,
see page 550.
Guide rails,
see page 509 onwards.

Uninterruptible power supply

- Ensures power continuity in the event of a mains failure
- Suitable for installation in a 5¼″ drive holder
- Floating contacts (DB-9) for UPS communication: Indicates the operating states: mains ok/ mains failure/end of battery capacity/input for UPS deactivation signal
- Integral maintenance-free batteries
- CE certified, EN 60 950 tested (LVD/EMC)

Note:
The UPS does not have an RS-232 interface. Upon request you can obtain an adaptor cable including CD-ROM with shutdown drivers for automatic termination of program routines and shutdown of the system for Windows, Netware and Linux.
Additional battery (5¼″) to extend to 500 VA available on request.

Packs of	Model No. RP
1	**3659.080**

Technical specifications:
Output 300 VA/180 W
Input/output voltage: 220, 230, 240 V AC ± 15 %
Input frequency: 50 Hz ± 5 %
Output frequency: 50 Hz ± 1 %
Switch-over time: < 4 ms
Charging time: 6 – 8 hours
(to 90 % capacity)
Operating environment:
Temperature 0°C – 40°C,
Humidity 0 – 90 %
Status displays:
LED for mains operation, back-up, low battery, over-temperature
Acoustic alarms:
Mains interruption (sounds every 5 sec.),
Low battery (sounds every sec.)
Test function:
Test switch on the front panel to check the UPS function
Approvals:
CE, EN 60 950 tested (LVD/EMC)
Hold-up time: 6 min.

AT/ATX power supplies, redundant power supplies

ATX power supply unit

for external switches

- PS/2 model
- Built-in fan
- Short circuit-protected
- CSA-approved
- Connection cable for $5^1/_4$″ and $3^1/_2$″ disk drives, hard drive and motherboard
- PFC passive

Technical specifications:
300 W/230 V AC
+3.3 V, 0.2 A/16.0 A
+5.0 V, 30.0 A/19.5 A
+12.0 V, 11.0 A
–12.0 V, 0.8 A
–5.0 V, 0.3 A
+5.0 VSB, 2.0 A
+3.3 V and +5 V, total max. 150 W
if 3.3 V/0.2 A, target +5 V/30 A
if 3.3 V/16 A, target +5 V/19.5 A

Packs of	Model No. RP
1	**3687.793**

Supply includes:
Connection cable.

Accessories:
Front panel for ATX power supply, see page 483.

Front panel

for ATX power supply
Front panel with cutouts for mounting the ATX power supply units in the subrack.

Material:
Aluminium, clear-chromated

Supply includes:
1 front panel, assembly parts,
EMC gaskets (with EMC version).

+5 VSB/2 A
+3.3 V plus 5 V max. = 120 W
+3.3, 5 V plus 12 V max. = 180 W

Version	Packs of	Model No. RP
ATX	1	**3688.130**

Supply includes:
DC connection cable.

Redundant power supply

for RAID

- Built-in fan
- Hot-swap version
- PFC active
- Individual power pack available (separately)
- W x H x D = 190 x 170 x 183 mm

Technical specifications:
2 x 300 W
90 – 264 V AC
47 – 63 Hz
5.0 V/25.0 A
12.0 V/14.0 A
–5.0 V/0.5 A
–12.0 V/0.5 A

Version	Packs of	Model No. RP
RAID version	1	**3688.125**
Individual power pack (spare)	1	**3688.126**

Supply includes:
DC connection cable.

Redundant power supply

for ATX

- PS/2 model, 2 switches, 1 connector
- Built-in fan
- Hot-swap version
- PFC active
- Individual power pack available (separately)
- W x H x D = 86 x 150 x 185 mm

Technical specifications:
2 x 300 W
90 – 264 V AC
47 – 63 Hz
3.3 V/20.0 A
5.0 V/25.0 A
5 VSB/1.5 V
12.0 V/16.0 A max. 20 A
–12.0 V/0.5 A
5 V, 3.3 V and 12 V plus max. 285 W

Version	Packs of	Model No. RP
ATX version	1	**3688.123**
Individual power pack (spare)	1	**3688.124**

Supply includes:
DC connection cable.

AT/ATX power supplies, redundant power supplies

Redundant power supply

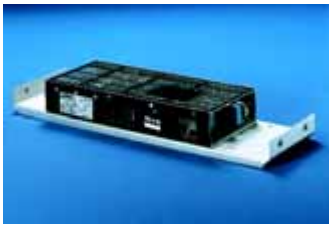
for ATX

- PS/2 model, 2 switches, 2 connector
- Built-in fan
- Hot-swap version
- PFC active
- Individual power pack available (separately)
- W x H x D = 86 x 160 x 220 mm

Technical specifications:
2 x 300 W
90 – 264 V AC
47 – 63 Hz
3.3 V/18.0 A
5.0 V/26.0 A
5.0 VSB/1.2 A
12.0 V/16.0 A max. 20 A
–12.0 V/1.0 A
+5 V, 3.3 V plus 12.0 V max. = 285 W

Version	Packs of	Model No. RP
ATX version	1	**3688.120**
Individual power pack (spare)	1	**3688.122**

Supply includes:
DC connection cable.



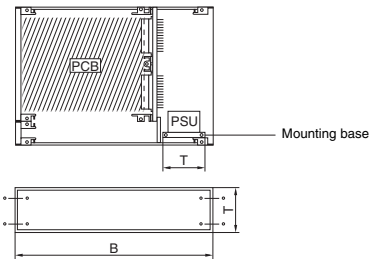
Mounting base for power supplies

- Attaches to the subrack side panel

Material:
2 mm aluminium, clear-chromated

Supply includes:
Assembly parts.

Width (B) mm	Depth (T) mm	Model No. RP
431.8	100	**3684.323**
431.8	130	**3684.324**



Female connector type M24/8

IEC 60 603-2 (DIN 41 612)

- Female connector for plug-in CPCI power supplies
- Quality level 2 to IEC 60 603-2 (DIN 41 612)
- Optional 20 A high current contacts for straight conductor connection either crimp or solder
- Volume resistance max. 1.5 mΩ
- Max. rated current: 40 A

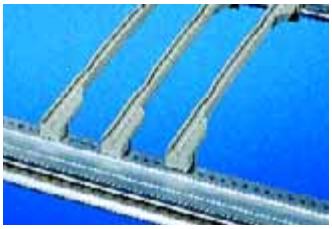
Supply includes:
5 connection sockets
(crimping or soldering method).

Type of connection	Packs of	Model No. RP
Soldering	1	**3687.665**
Crimping	1	**3687.666**

Also required:

For mounting in the subrack, a Z rail is required, see page 504.

Female connector type H15 IEC 60 603-2 (DIN 41 612)
for plug-in power supplies, see page 550.

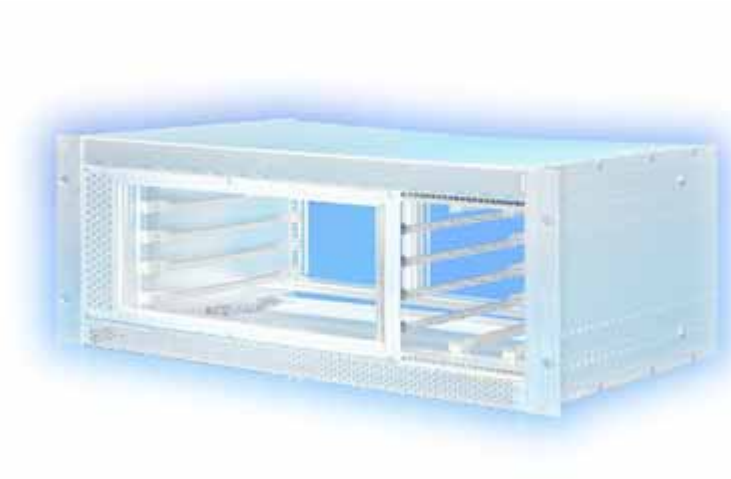


Plastic guide rails
for routing the plug-in power supply, see page 509.

Keyable guide rails, plastic, see page 510/511.

Note:
The CompactPCI specification prescribes green guide rails with $^1/_2$ HP offset for power supply installation (PICMG 2.11).

Features

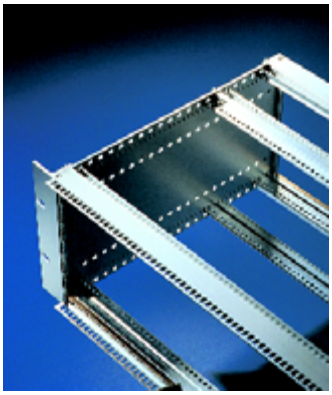


The modular concept of Ripac subracks facilitates a wide range of potential applications with a minimum of components.

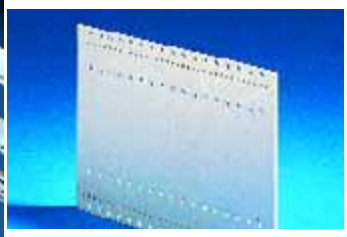
All Ripac subracks are based on to common horizontal rails and system components.

The difference lies in the design of the side panels and/or installation variants.

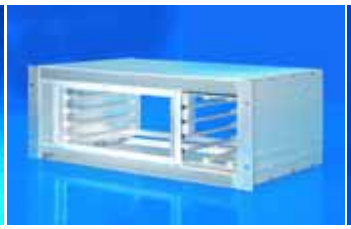
The subracks are shock- and vibration-tested and comply with IEC 60 297-3 as well as IEEE 1101.1/1101.10.



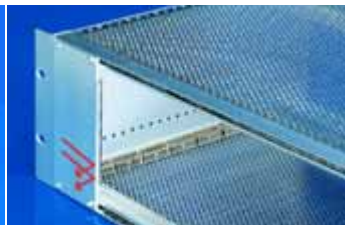
Design features, Ripac Vario and Vario EMC



Depth-variable system installation is supported by the 10 mm pitch pattern of holes in the side panels.



Complex applications thanks to numerous size variants and system accessories.

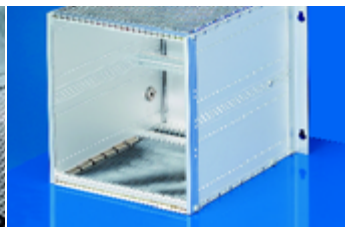


EMC shielding via horizontal and vertical EMC gaskets. May also be retrofitted.

Design features, Ripac Compact

Top-hat rail mounting
Rear adaptors allow simple snap-mounting directly onto the top-hat rail.

Mounting on mounting plates
Machined keyholes for direct mounting on mounting plates.

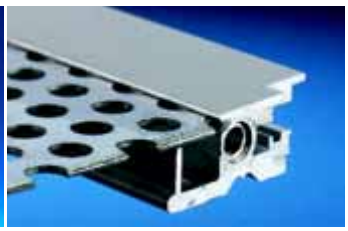


EMC version optional.

Design features, Ripac Vario Mobil

- The subracks have been tested for use in the German national railway. Testing was conducted in accordance with standard EN 50 155 (electronic equipment in rail vehicles). The construction of the subracks tested conforms to IEC 60 297.
- Vibration and shock-tested to: IEC 600-68-2-6, test Fc IEC 600-68-2-27, test Ea
- Supply includes: Subrack, fully assembled.

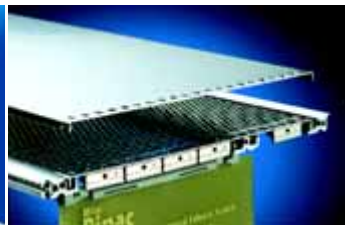
Design features, Ripac ECO



Side panels of sheet steel, zinc-plated. Flanges of aluminium, clear-chromated. Prescribed mounting positions for 160 and 220 mm board formats.

Simple cover mounting: Easily slid into the horizontal rails.

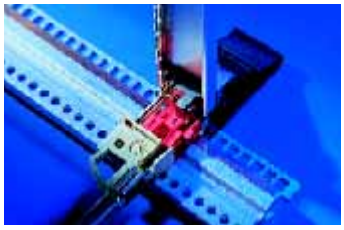
System installation, accessories

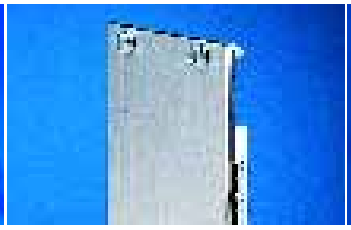


Guide rails of plastic or aluminium, also keyable.

Covers vented or solid, snap-fastening or screw-fastening.

ESD contacts for guide rails, to remove electrostatic charges.





Keys for keying the board-type plug-in units.

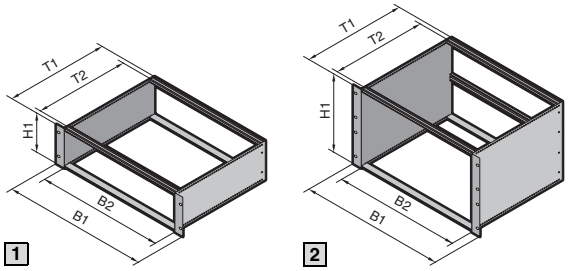
Front panels in various versions, e.g. with handles, vented or for EMC applications.

Injector/extractor handles self-latching, of plastic or aluminium.

Connectors IEC 60 603-2 (DIN 41 612) in various designs.

Mounting kits for combined installation of single and double Euroboards, horizontal or vertical.

Ripac ECO 3 U, 6 U, sheet steel



Material/surface finish:
Side panels:
1.5 mm sheet steel, zinc-plated, passivated
Flanges/horizontal rails:
Extruded aluminium section, clear-chromated

Supply includes:
Side panels, flanges, horizontal rails, threaded inserts

Detailed parts lists,
see page 1155.

Tests:
Vibration and shock-tested to:
IEC 600-68-2-6 test Fc
IEC 600-68-2-27 test Ea

Standards:
Ripac subracks are based on the system dimensions of IEC 60 297-3/-5.

Detailed drawing,
see page 1155.

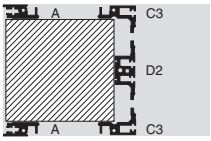
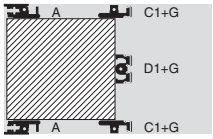
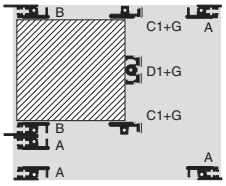
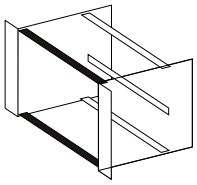
[1] For conductive or insulated attachment of backplanes

All system requirements may be covered with just a few basic types of horizontal rail. A cost-effective, easy-to-manage range.









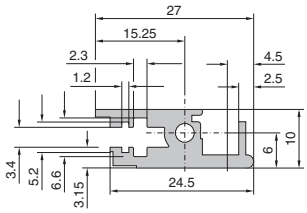
Front horizontal rail (A)

To accommodate guide rails and for the attachment of front panels.

- Front projection 2.5 mm in accordance with IEC 60 297-3.
- HP pitch patterns of holes for the precise installation of guide rails
- M4 thread on end face
- Straight-through core hole
- Horizontal rail 192 HP without machining on the end faces. Suitable for cutting to length

Material:
Extruded aluminium section

Surface finish:
Clear-chromated or anodised



Usable width (HP)	Packs of	Model No. RP

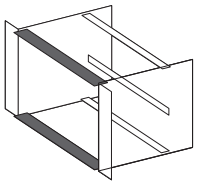
[1)] Including 4 assembly screws
[2)] Anodised

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

Accessories:

Threaded inserts,
see page 504.



Front horizontal rail, with 10 mm extension (B)

for type IV, IVs and VII injector/extractor handle
To accommodate guide rails and for the attachment of front panels.

- Front projection and pitch pattern of holes based on IEEE 1101.10 and IEC 60 297-5-101, for use of type IV and VII injector/extractor handles
- HP pitch patterns of holes for the precise installation of guide rails
- M4 thread on end face
- Straight-through core hole
- Horizontal rail 192 HP without machining on the end faces. Suitable for cutting to length

Material:
Extruded aluminium section

Surface finish:
Clear-chromated or anodised

[2)] Anodised

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

Accessories:

Threaded inserts,
see page 504.

Horizontal rails

Double front horizontal rail, with 10 mm extension (B1)

To accommodate guide rails and for the attachment of front panels.

- Front projection and pitch pattern of holes based on IEEE 1101.10 and IEC 60 297-5-101, for use of type IV and VII injector/extractor handles
- HP pitch patterns of holes for the precise installation of guide rails
- M4 thread on end face
- Straight-through core hole

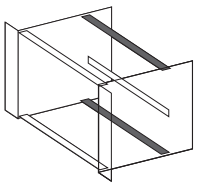
Material:
Extruded aluminium section

Surface finish:
Clear-chromated

Usable width (HP)	Packs of	Model No. RP
84	1	**3687.724**

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.



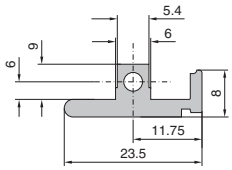
Rear horizontal rail (C1)

To accommodate guide rails and for the attachment of Z rails, insulating strips or conductive strips and backplanes.

- Tapped holes M2.5 on a 1 HP pitch pattern
- HP pitch patterns of holes for the precise installation of guide rails in the HP pitch pattern
- M2.5 thread for the installation of Z-rails, or backplanes.
- M4 thread on end face
- Straight-through core hole
- Horizontal rail 192 HP without machining on the end faces. Suitable for cutting to length

Material:
Extruded aluminium section

Surface finish:
Clear-chromated or anodised



Usable width (HP)	Packs of	Model No. RP
21	1	**3685.991**
40	1	**3684.962**
42	1	**3684.570**

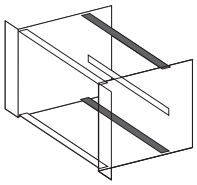
84	1	**3684.572**
84	2	**3685.268**[1)]
192	1	**3688.002**[2)]

[1)] Including 4 assembly screws
[2)] Anodised

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

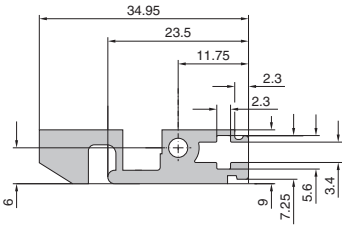


Rear horizontal rail, reinforced version (C2)

For use with high loads.

Material:
Extruded aluminium section

Surface finish:
Clear-chromated



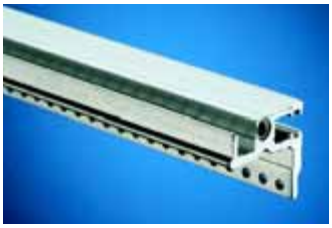
Usable width (HP)	Packs of	Model No. RP
42	1	**3687.604**
63	1	**3687.605**
84	1	**3687.606**

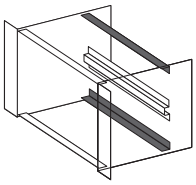
Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

Accessories:

Threaded inserts,
see page 504.





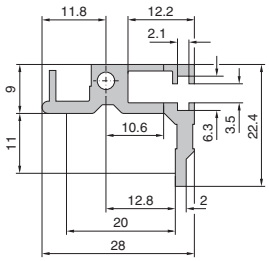
Rear horizontal rail, with integral Z rail (C3)

To accommodate guide rails. Integral Z rail for mounting connectors to IEC 60 603-2.

- HP pitch patterns of holes for the precise installation of guide rails
- 84 tapped holes M2.5 for the mounting of connectors
- M4 thread on end face
- Straight-through core hole

Material:
Extruded aluminium section

Surface finish:
Clear-chromated



Usable width (HP)	Packs of	Model No. RP
42	1	**3686.191**
63	1	**3686.919**
84	1	**3686.159**

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

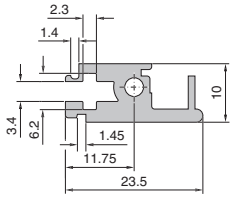
Rear horizontal rail, with channel, for Ripac ECO (C4)

For the accommodation of guide rails and for the attachment of Z rails, insulating strips or conductive strips and backplanes.

- HP pitch patterns of holes for the precise installation of guide rails
- Channel for sliding in covers
- For mounting backplanes/Z rails, threaded inserts (RP 3684.610) are additionally required
- M4 thread on end face
- Straight-through core hole
- Not suitable for mounting under covers

Material:
Extruded aluminium section

Surface finish:
Clear-chromated



Usable width (HP)	Packs of	Model No. RP
84	1	**3688.104**

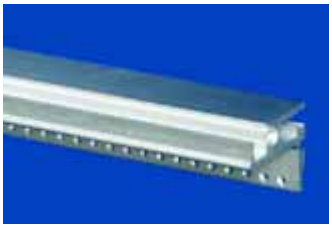
Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

Accessories:

Threaded inserts,
see page 504.

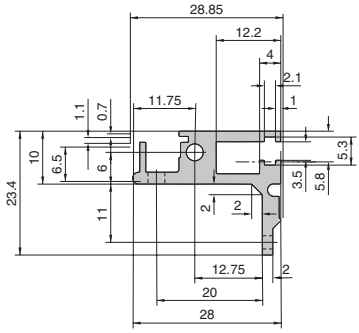
Horizontal rails



Rear horizontal rail, with integral Z rail, for Ripac ECO (C5)

To accommodate guide rails. Integral Z rail for mounting connectors to IEC 60 603-2.

- HP pitch patterns of holes for the precise installation of guide rails
- 84 tapped holes M2.5 for connector mounting
- M4 thread on end face
- Straight-through core hole



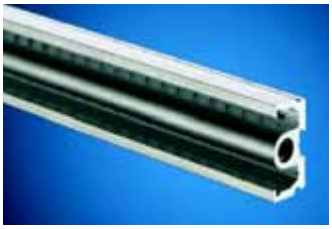
Usable width (HP)	Packs of	Model No. RP
84	1	**9901.991**

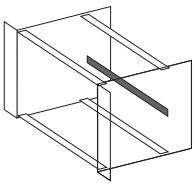
Material:
Extruded aluminium section

Surface finish:
Clear-chromated

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.





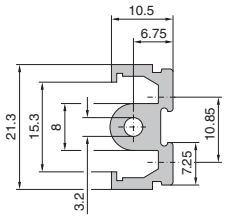
Rear horizontal rail, centre (D1)

When using 6 U PCBs or box-type plug-in units. Option of attaching Z rails, insulating strips or conductive strips.

- 2 x 84 tapped holes M2.5
- M4 thread on end face
- Straight-through core hole
- Horizontal rail 192 HP for cutting to length

Material:
Extruded aluminium section

Surface finish:
Clear-chromated or anodised

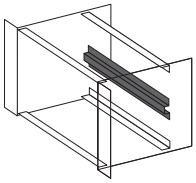


Usable width (HP)	Packs of	Model No. RP
40	1	**3684.963**
42	1	**3684.580**
63	1	**3684.581**
84	1	**3684.582**
84	1	**3685.270**[1)]
192	1	**3688.003**[2)]

[1)] Including 2 assembly screws
[2)] Anodised

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.



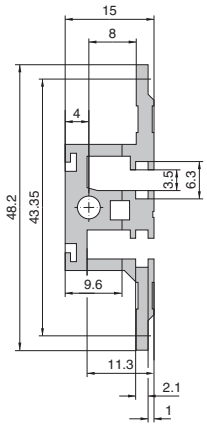
Rear horizontal rail, centre, with integral Z rail (D2)

When using 6 U PCBs or box type plug-in units. Integral Z rail for mounting connectors to IEC 60 603-2.

- 2 x 84 tapped holes M2.5
- M4 thread on end face
- Straight-through core hole

Material:
Extruded aluminium section

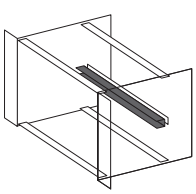
Surface finish:
Clear-chromated



Usable width (HP)	Packs of	Model No. RP
42	1	**3687.600**
63	1	**3687.601**
84	1	**3687.602**

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.



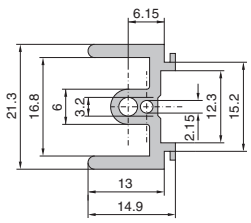
Rear adaptor rail, centre (E)

When subdividing 6 U into 2 x 3 U, the adaptor rail when fastened to the centre horizontal rail accommodates the guide rails.

- HP pitch patterns of holes for the precise installation of guide rails
- M4 and M2.5 thread on the end face
- Straight-through core hole
- Horizontal rail 192 HP without machining on the end faces. Suitable for cutting to length.

Material:
Extruded aluminium section

Surface finish:
Clear-chromated or anodised



Usable width (HP)	Packs of	Model No. RP
12	1	**3684.587**
16	1	**3684.588**
20	1	**3684.589**
40	1	**3684.964**
42	1	**3684.590**
63	1	**3686.005**
84	1	**3684.591**
84	1	**3685.272**[1)]
192	1	**3688.004**[2)]

[1)] Including 2 assembly screws
[2)] Anodised

Also required:

Assembly screws M4 x 12,
packs of 100, Model No. RP 3654.300,
see page 576.

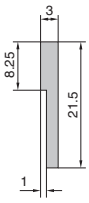
Horizontal rails

Z rail for connector IEC 60 603-2 (F)

With 84 x M2.5 thread.

Material:
Extruded aluminium section

Surface finish:
Clear-chromated



Usable width (HP)	Packs of	Model No. RP
4	1	**3684.597**
8	1	**3684.598**

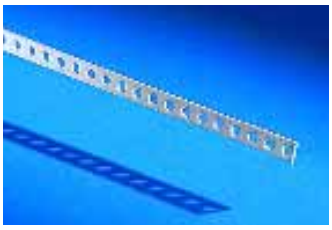
Rear horizontal rail, centre, fitted with insulating strips (top) and conductive strips (bottom).

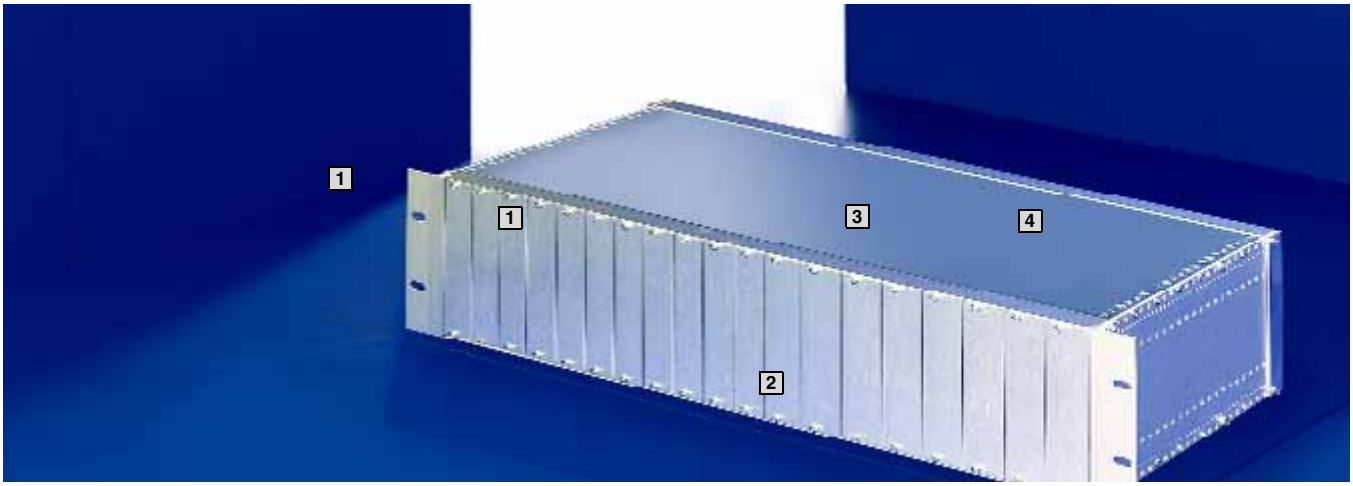


Punched strip

Material:
Aluminium, clear-chromated

Usable width (HP)	Packs of	Model No. RP
84	2	**3685.275**

Components for EMC installation

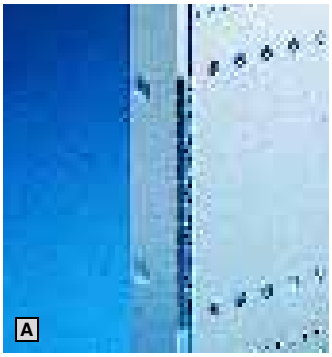


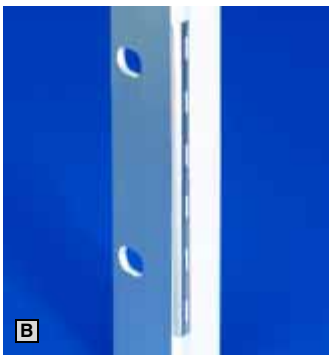
EMC (electromagnetic compatibility), refers to the ability of an electrical device to function satisfactorily in its electromagnetic environment without influencing or being influenced by this environment more than is admissible.

These requirements were taken into account when developing the Rittal subracks. They are made entirely from metal and coated with a conductive surface finish.

Stainless steel EMC gaskets ensure conductive connection of the seperate parts.

1 EMC gaskets, vertical
2 EMC gaskets, horizontal
3 EMC gaskets for covers
4 Mounting blocks





EMC gaskets, vertical

To ensure EMC protection between the subrack side panel and the front/rear panels. There are two versions available.

Suitable for mounting on:
- 482.6 mm (19″) flanges for subracks
- Corner trims, rear
- EMC contact strip
- U-shaped front panels
- Trim panels for Ripac Vario-Module
- Flanges for Ripac Vario-Module

Material:
Stainless steel

U	Packs of	Model No. RP
3	1	**3684.643**
6	1	**3684.644**
9	1	**3684.645**

Also required:

EMC gaskets, vertical, see page 506.
Assembly screws M3 x 6, packs of 100, Model No. RP 3684.233, see page 576.

EMC gaskets, horizontal (K)

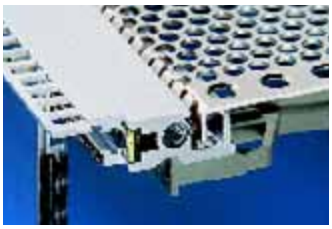
For horizontal EMC protection. For snap-fastening onto the front horizontal rails.

Material:
Stainless steel

European patent no. 0 937 375 with validity for DE
US patent no. 6,137,052
Chinese Patent No. ZL 97 1 98582.0

EMC

Usable width (HP)	Packs of	Model No. RP
For top/bottom horizontal rail		
40	1	**3684.974**
84	1	**3684.808**
84	10	**3684.246**
For subdivision of 6 U into 2 x 3 U, between 2 horizontal rails		
84	1	**3685.789**
84	10	**3685.229**



EMC gaskets

for covers
For EMC shielding between the horizontal rails and covers.

Material:
Stainless steel

EMC

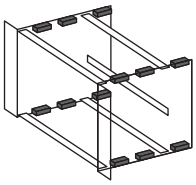
HP	Packs of	Model No. RP
84	10	**3684.245**

Mounting blocks

For mounting covers, versions 1 – 4, on the subrack side panel.

Material:
Die-cast zinc, nickel-plated

Note:
For EMC applications, mounting blocks must be fitted across the entire subrack depth. The table here shows the number of mounting blocks required to install 1 cover with EMC shielding.



EMC

	Packs of	Model No. RP
Mounting blocks 28.5 mm long	10	**3684.234**

Also required:

Assembly screws M3 x 6, packs of 100, Model No. RP 3684.233, see page 576.

Number of mounting blocks for max. EMC protection	Cover plate depth mm

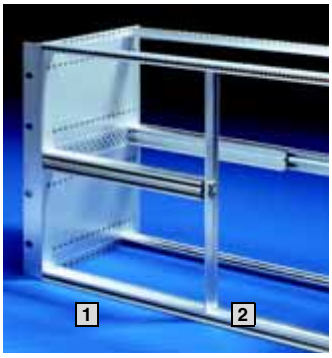
14	272
16	312
18	332
20	372
24	432
28	492
32	552

Mounting kits



Vertical divider kit

For the combined installation of single and double Euroboards in 6 U and 9 U subracks.

Material:
Aluminium, clear-chromated

Supply includes:
2 horizontal rails, front,
1 adaptor rail,
2 threaded inserts,
1 vertical support (from 12 HP),
assembly parts.

Accessories:

Front panel, see page 508.
EMC gaskets, horizontal, see page 507.

6 U (2 x 3 U)

HP 2 (6 U)	HP 1 (2 x 3 U)	Model No. RP
68	14	**3684.220**
61	21	**3684.221**
54	28	**3684.222**
42	40	**3684.223**
40	42	**3684.224**

9 U (1 x 6 U + 1 x 3 U)

HP (9 U)	HP (1 x 6 + 1 x 3 U)	Model No. RP
80	4	**3684.225**
76	8	**3684.226**
70	12	**3684.227**
66	16	**3684.228**
62	20	**3684.229**

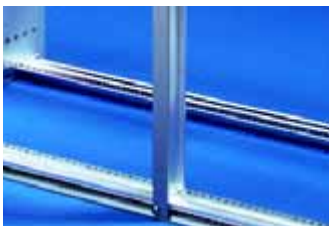
Vertical support

Required for the combined installation of single, double and triple Euroboards in one subrack.

Material:
Aluminium, extruded

Surface finish:
Clear-chromated

U	Packs of	Model No. RP
6	1	**3684.678**
9	1	**3684.679**



Front panel

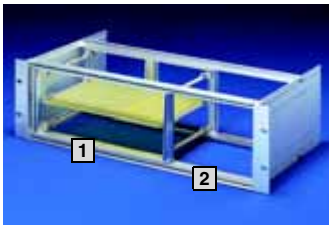
To conceal the vertical support of the vertical divider kit.

Material:
Aluminium, anodised

Supply includes:
Mounting parts.

U	HP	Packs of	Model No. RP
6	2	1	**3685.176**
9	2	1	**3685.286**

EMC version,
see page 538.



Horizontal divider kit

For the horizontal installation of 6 U/9 U PCBs in 3 U/4 U subracks.

1 Horizontal installation space:
3 U subrack: 20 HP (5 slots)
4 U subrack: 28 HP (7 slots)

2 Vertical installation space:
(with installation of double Euroboards)
31 HP (without trim frame)
28 HP (with trim frame)

Material:
Aluminium, clear-chromated

Supply includes:
2 horizontal rails, front,
2 horizontal rails, rear,
1 or 2 rear horizontal rails, centre
2 threaded inserts,
4 or 6 insulating strips,
4 connection parts,
assembly parts.

For backplane mounting
with standard horizontal rail, front

U horizontal	Model No. RP	
	for 3 U subrack	for 4 U subrack
6	**3684.206**	**3684.208**
9	**3684.207**	**3684.209**

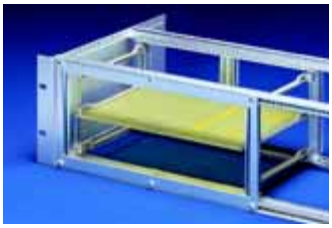
For backplane mounting,
front horizontal rail with 10 mm extension

U horizontal	Model No. RP	
	for 3 U subrack	for 4 U subrack
6	**3684.210**	**3684.212**
9	**3684.211**	**3684.213**

Accessories:

Trim frame,
see page 509.

Mounting kits/guide rails



Trim frame

for horizontal mounting kit
To conceal the front sections of the horizontal mounting kit.

Material:
Aluminium, anodised

U horizontal	HP	Model No. RP	
		for 3 U subrack	for 4 U subrack
6	56	**3685.783**	**3685.785**
9	84	**3685.784**	**3685.786**

Also required:
Collar screws and plastic collars,
packs of 100 sets, Model No. RP 3658.160,
see page 576.

Trim frame, vented

for horizontal mounting kit
To conceal the front sections of the horizontal mounting kit.

Material:
Aluminium

Surface finish:
Anodised,
clear-chromated (EMC version)

Supply includes:
EMC accessories
(for EMC version).

EMC

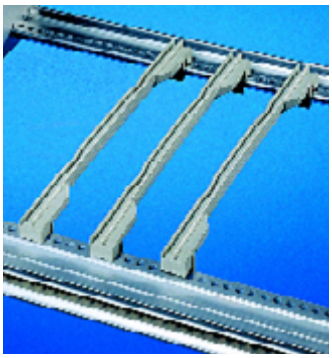
U horizontal	HP	Model No. RP	
		for 3 U subrack	for 4 U subrack
6	63	**3685.787**	**3685.788**

Also required:
Collar screws and plastic collars,
packs of 100 sets, Model No. RP 3658.160,
see page 576.

EMC version

U horizontal	HP	Model No. RP	
		for 3 U subrack	for 4 U subrack
6	63	**3685.291**	**3685.292**

Also required:
Centering screws,
packs of 100, Model No. RP 3687.050,
see page 577.



Plastic guide rails

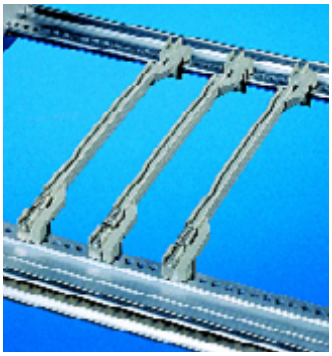
For 160, 220 and 280 mm PCBs up to 2 mm nominal thickness.

2 versions are available:
- Snap-in fastening and screw-fastening
- Snap-in fastening

Material:
Polycarbonate, base material to UL 94-V0

PCB depth mm	Packs of	Model No. RP	
		Snap-in fastening/ screw-fastening[1)]	Snap-in fastening
160	1	**3684.657**	**3684.654**
220	1	**3684.658**	**3684.655**
280	1	**3684.659**	**3684.656**

Also required:
[1)] Assembly screws,
packs of 100, Model No. RP 3654.360,
see page 576.



Plastic guide rails

for contact spring fitting
For 160, 220 and 280 mm PCBs up to 2 mm nominal thickness. By installing contact springs, an electrical connection can be made between the PCB and the assembly.

Material:
Polycarbonate, base material to UL 94-V0

PCB depth mm	Packs of	Model No. RP
160	1	**3684.660**
220	1	**3684.661**
280	1	**3684.662**

Accessories:
Contact springs,
see page 510.

Guide rails

Contact springs

For electrical connection between the PCB and the subrack, or to discharge static charges from the PCB.
Suitable for installation in “guide rails for contact spring fitting” and “end pieces for guide rails”.

Packs of	Model No. RP
10	**3687.726**

1

2

Guide rails, aluminium

For high loads. Suitable for nominal PCB thicknesses from 1.6 mm. A distinction is made between guide rails for and without end pieces. The guide rails without end pieces are screw-fastened directly into the horizontal rail.

Material:
Aluminium

PCB depth mm	Packs of	Model No. RP	
		1 Without end piece[1)]	2 For end pieces
160	1	**3687.526**	**3684.663**
220	1	**3687.527**	**3684.664**
280	1	**3687.528**	**3684.665**
1000	1	**3684.666**	–

Also required:

[1)] Screw M2.5 x 6, packs of 100,
Model No. RP 3654.340, see page 576.
[1)] Nut M2.5, packs of 100,
Model No. RP 3654.370, see page 576.
[1)] Retaining cage M2.5, packs of 100,
Model No. RP 9901.417, see page 576.

End pieces

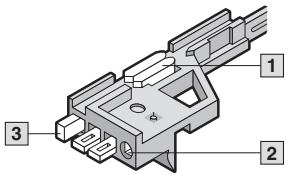
for guide rails, aluminium
To discharge static charges, contact springs RP 3687.726 may be used.

Material:
Polycarbonate, base material UL 94-V1

	Packs of	Model No. RP
End piece, front	1	**3684.668**
End piece, rear	1	**3685.759**

Accessories:

Contact springs,
see page 510.



Keyable guide rails, plastic

Guide rails 4 HP, keyable, to IEEE 1101.10.
- For 1.6 – 2.0 mm nominal thickness
- Chambers for the installation of keys
- Option of installing ESD contact to discharge static charges
- Narrow design for maximum air flow
- Various colour variants to identify the slots:
  – Red for system slot
  – Green for power supply
  – Yellow and grey for board-type plug-in units

1 ESD contact for PCB
2 ESD contact for front panel
3 Keys

Material:
Polycarbonate, base material to UL 94-V0

Note:
For coding use in conjunction with injector/extractor handles type IV, IVs, VII.

Accessories:

Keys, see page 514.
ESD contact, see page 513.
Extractor handles type IV, IVs, VII,
see page 528 – 530.

For PCB depth mm	Packs of	Model No. RP			
		Grey	Red	Green	Yellow
160	10	**3685.257**	–	–	–
220	10	**3685.258**	–	–	–
280	10	**3685.259**	–	–	–
160	1	**3684.669**	**3686.063**	**3688.055**	**3689.089**
220	1	**3684.953**	–	–	**3689.091**
280	1	**3684.954**	–	–	**3689.093**

Keyable guide rails

with $^1/_2$ HP offset

Guide rails with $^1/_2$ HP offset for use, in telecom applications. This allows PCBs to be populated on both sides. Green guide rails with offset are prescribed in the CompactPCI specification (PICMG 2.11) for the installation of power supply units.

- For 1.6 – 2.0 mm PCB thickness
- 4 HP x 160/220 mm
- Narrow design for maximum air flow
- Chambers for the installation of keys
- Option of installing ESD contact to discharge static charges

Material:
Polycarbonate, base material to UL 94-V0

Note:
For coding for use in conjunction with extractor handles type IV, IVs, VII with $^1/_2$ HP offset.

For PCB depth mm	Packs of	Colour	Model No. RP
160	1	Grey	**3686.137**
		Yellow	**3689.090**
		Green	**3687.832**
220	1	Grey	**3686.136**
		Yellow	**3689.092**
280	1	Grey	**3686.000**

Accessories:

Keys, see page 514.
ESD contact, see page 513.
Extractor handles type IVs, type VII, with $^1/_2$ HP offset, see page 529 – 530.

Keyable guide rails

for rear I/O assemblies

Guide rails 4 HP, keyable, to IEEE 1101.10. Prepared to accommodate a ground contact for assembly of a plug-type connection.

- For 1.6 – 2.0 mm nominal thickness
- For 80 mm deep PCBs
- Chambers for the installation of keys
- Option of installing ESD contact to discharge static charges
- Narrow design for maximum air flow
- For CPCI or VME applications

Material:
Polycarbonate, base material to UL 94-V0

Note:
For coding use in conjunction with type IV, IVs, VII injector/extractor handles.

Colour	For PCB depth mm	Packs of	Model No. RP	
			Guide rails	
			Top	Bottom
Grey	80	1	**3687.936**	**3687.937**
Yellow	80	1	**3689.097**	**3689.098**

Accessories:

Keys, see page 514.
ESD contact, see page 513.
Ground contact, see page 511.
Extractor handles type IV, IVs, VII, see page 528 – 530.

Ground contact

Ensures a plug-in ground connection. UL-approved.

Material:
Die-cast zinc

Supply includes:
Grounding bush, contact spring.

Note:
Only suitable for use in conjunction with keyable guide rails for rear I/O assemblies.

	Model No. RP	
	1 set	50 sets
Location bush and contact spring	**3689.036**	**3687.951**

Also required:

Assembly screws 3.5 x 12 mm, packs of 50, Model No. RP 3684.109, see page 576.

Guide rails

Keyable guide rails, aluminium, three-piece

Keyable guide rails with aluminium centre part, for high mechanical loads.
Suitable for 1.6 – 2.0 mm PCB thickness.

Guide rails comprise of the following individual components:

1 2 end pieces,
2 1 aluminium centre part,
3 Insulating centre part(s)

1 End pieces

for three-piece guide rails
For 1.6 – 2.0 mm PCB thickness.

Material:
Polycarbonate, base material to UL 94-V0

	Packs of	Model No. RP
	10 pairs	**3685.265**
Front end piece	1	**3685.790**
Rear end piece	1	**3684.670**

Note:
A front and a rear end piece is required for each guide rail.

2 Aluminium centre piece

for three-piece guide rails
For 1.6 – 2.0 mm PCB thickness.

Material:
Aluminium, unplated

For PCB depth mm	Model No. RP	
	Packs of 1	Packs of 10
220	**3684.673**	**3685.260**
280	**3684.674**	**3685.261**
340	**3684.675**	**3685.262**
400	**3684.676**	**3685.263**
1000	**3684.672**	–

3 Insulated centre part

for three-piece guide rails
The insulating centre part is pushed onto the aluminium centre piece.
Length: 60 mm.

Material:
Plastic, self-extinguishing to UL 94-V0

Packs of	Model No. RP
1	**3684.677**
10	**3685.264**

For PCB depth mm	Number of insulating strips required
160	1
220	2
280	3
340	4
400	5

Plastic guide rails

for box type plug-in units
For PCB depth 1.6 mm.
For insertion into covers with vent slots, see page 545.

Material:
Noryl

For PCB depth mm	Packs of	Model No. RP
160	10	**3606.140**
220	10	**3606.200**

Air block panel

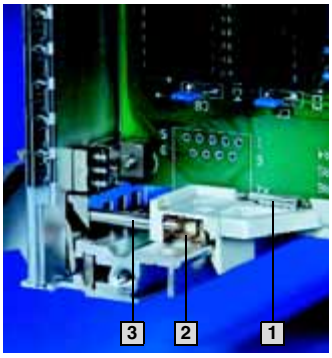
for unused slots
To conceal unused slots and prevent unwanted airflow. The air block panel simply snaps into position on the guide rails.

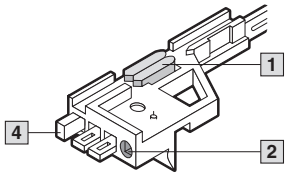
Material:
Polycarbonate, self-extinguishing UL 94-V0

Colour:
Blue

Note:
Not suitable for use in conjunction with guide rails with $^1/_2$ HP offset.

for guide rail	Packs of	Model No. RP
160 mm	1	**3687.924**





ESD contacts

for installation in keyable guide rails.
To discharge static charges.

1 **ESD contact for plug-in board**
For permanent, direct discharge from the PCB.

2 **ESD clip for front panel**
To discharge static charges in conjunction with the ESD pin. For insertion into the end piece of the guide rail.

3 **ESD pin**

4 **Keys**

Material:

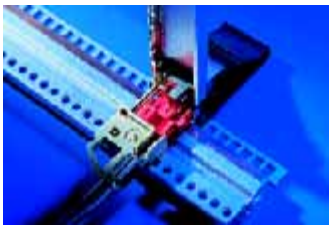
1 Stainless steel

2 Tin bronze

ESD contact for	Packs of	Model No. RP
PCB	50	**3684.204**
Font panel	50	**3684.205**

Note:
Only for use in conjunction with extractor handle with ESD pin (type IV, IVs, VII),
see page 528 – 530.

Keying/card ejectors



Keys

Keys are used for coding of board-type plug-in units and prevent their use of assemblies in incorrect slots. The keys are inserted into the chambers of the keyable guide rails and of injector/extractor handles, types IV, IVs and VII (4 positions are possible). This produces 64 keying combinations per guide rail. When keying the top and bottom guide rail, 4096 potential combinations are possible.

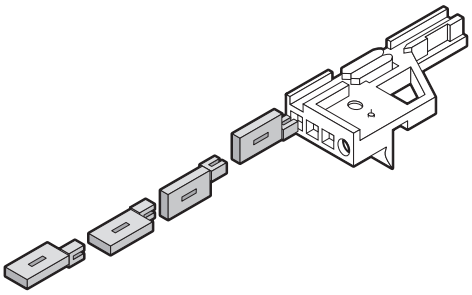
Standards:
IEEE 1101.10, IEC 602 97-5-104

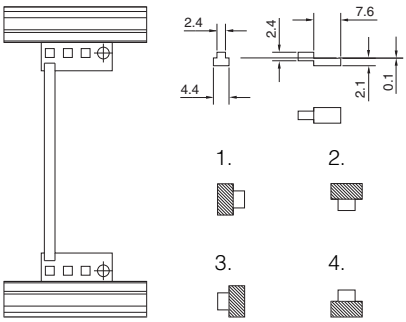
Material:
Plastic, PBTP, basic material to UL 94-V0

Colour	Packs of	Model No. RP
Grey	100	**3684.325**
Red	100	**3684.326**

Accessories:

Keying tool,
see page 514.



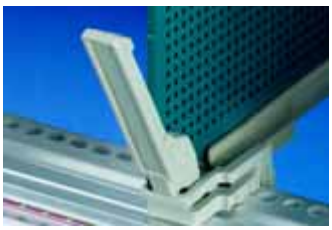


Coding tool

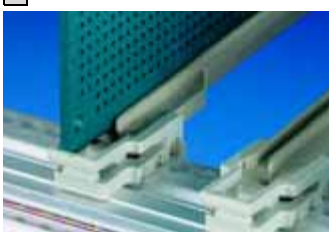
For simple assembly of coding keys. Up to 3 keys may be fitted at the same time. An integral alignment pin makes positioning easier.

Material:
Polycarbonate, base material to UL 94-V0

Packs of	Model No. RP
1	**3687.956**



1



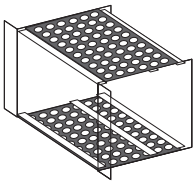
2

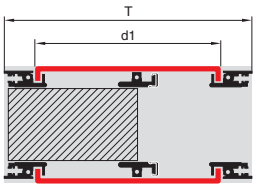
PCB ejector/retainer

The two-piece board ejector is used for securing and extracting PCBs without front panels. The base section may also be used separately for board retention only.

Material:
Polycarbonate, base material to UL 94-V0

	Packs of	Model No. RP
1 PCB ejector/retainer	10	**3687.014**
2 PCB retainer	10	**3687.052**





Covers version 1

For all Ripac Vario, Ripac Vario EMC, Ripac Compact and Ripac Vario Mobil subracks.
To cover the overall subrack depth.
(EMC application) or for connector protection.

- Flat design for top and bottom
- Optionally solid or perforated
- For mounting on the subrack side panel with the aid of mounting blocks.

Material:
1.0 mm aluminium, untreated, hole diameter 4 mm in vented version.

Set includes:
2 covers,
8 mounting blocks 28.5 mm long,
24 assembly screws

Single piece supply includes:
1 cover

Note:
For EMC applications, additional mounting blocks must be fitted across the entire subrack depth.

Covers version 4

For all Ripac Vario, Ripac Vario EMC and Ripac Vario Mobil subracks.
To cover the overall subrack depth.
(EMC application).

- Cover top/bottom with $^1/_2$ U edge fold to cover the $^1/_2$ U section in the subrack.
- Optionally perforated or solid on the front.
- Suitable for subracks 4 U (3 + 2 x $^1/_2$), 7 U (6 + 2 x $^1/_2$).
- For mounting on the subrack side panel with the aid of mounting blocks.

Material:
1.0 mm aluminium, untreated, hole diameter 4 mm in vented version.

Note:
For EMC applications, mounting blocks must be fitted across the entire subrack depth.

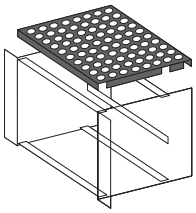
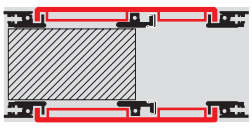
EMC gaskets for coves,
see page 507.
Assembly screws,
packs of 100, Model No. RP 3684.233,
see page 576.





Covers version 5

(snap fastening)
For all Ripac Vario, Ripac Vario EMC and Ripac Vario Mobil subracks.
To cover the overall subrack depth or PCB depth.

Simple assembly:
- Side edge fold with half shears facilitates fast assembly (without mounting blocks) by simply snap-fastening.
- Side notches for fitting horizontal rails in 160, 220 or 280 mm depth.
- Optionally solid or perforated.

Material:
1.0 mm aluminium, untreated, hole diameter 4 mm in vented version.

Supply includes:
2 gaskets

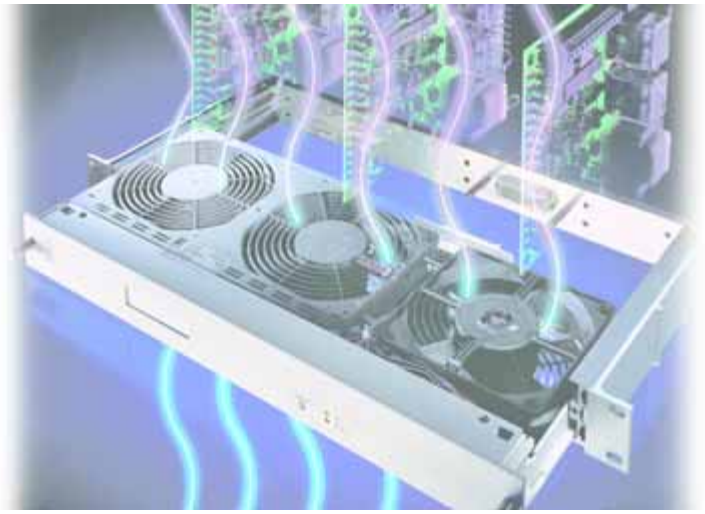
Features

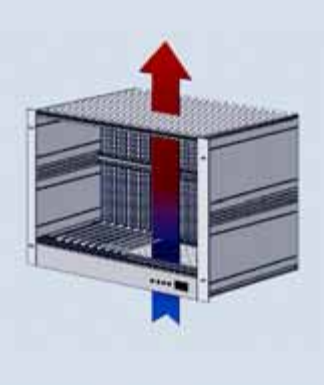


Heat shortens the service life of equipment leading to failure, and also diminishes the electronic high performance.

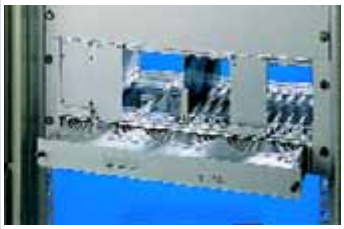
The problem lies in high heat losses and compact installation spaces. For this reason, effective heat dissipation is vital to ensure long service life and operational reliability.

As well as the components shown below, Rittal system climate control also offers a range of other 482.6 mm (19″) cooling systems and rack-mounted fans.

System climate control, see from page 578.



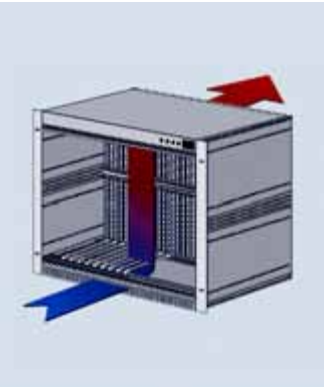
Vertical cooling



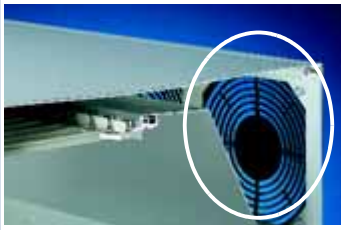
Rack-mounted fans are installed below the subrack in the enclosure. This ensures permanent air circulation to prevent the formation of hot spots.

Fans are installed directly in the subrack, below or above the PCBs, with the aid of fan mounting plates, thereby preventing heat accumulation.

AC and DC fans in various output categories, can be retrofitted.

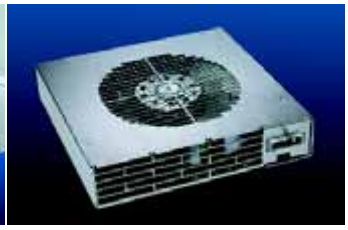


Diagonal cooling

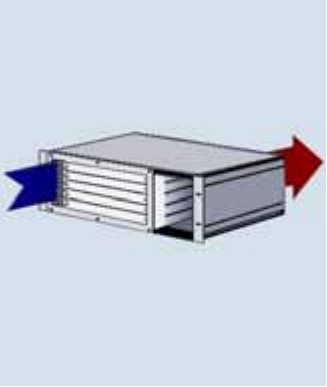


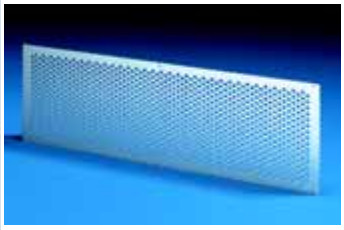
The air baffle plate in combination with . . .

. . . the air block panel ensures targeted air routing inside the subrack.



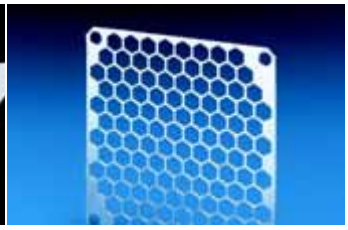
RiCool high-capacity fan for heat losses of 700 W or more.



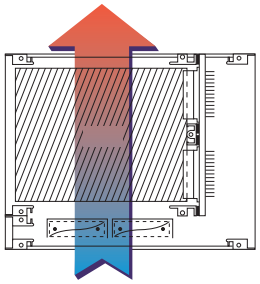


Front and rear panels for ventilation – also available in an EMC version.

Rear panels with cutouts for the installation of 80 or 120 mm fans.

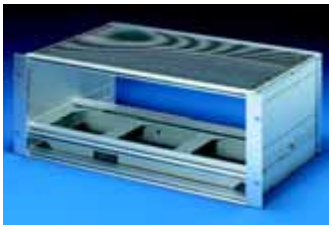


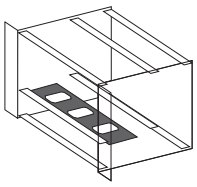
A finger guard or EMC shielding plate may be used to cover the fan cutouts.



Vertical cooling from bottom to top

- Air flow via normal convection or forced cooling devices in the enclosure or housing outside of the subrack.
- Vertical forced air flow, supported by fans installed at the bottom of the subrack (1 U). For the cooling of enclosures and housings, rack-mounted fans, see page 645 and rack-mounted cooling units, see page 644, are available.





Fan mounting plate

For installing 120 mm fans in 4 U and 7 U subracks.
For mounting on the subrack side panels.

Material:
1.5 mm Aluminium, anodised

Supply includes:
1 fan mounting plate

U	For PCB depth	No. of fan mounting plates required	HP	Model No. RP

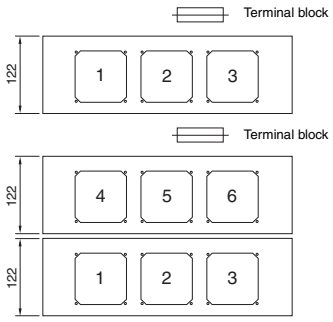
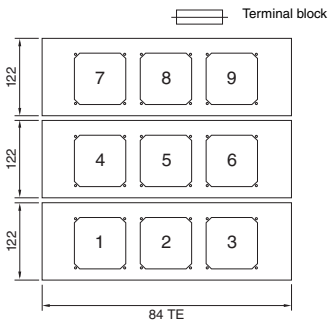
Also required:

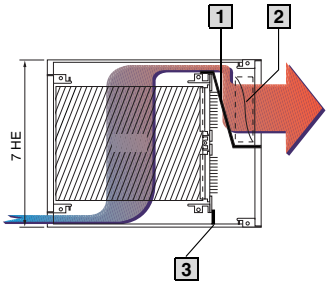
1 terminal block is required for each subrack.

Packs of	Model No. RP
1	**3686.805**





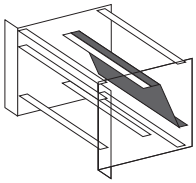
TE = HP



Diagonal cooling from front to back

Diagonal air flow from front to back allows individual cooling of PCBs in vertical installation position. An air baffle and air partition ensure controlled air flow.

1 Air baffle, see page 521.
2 Fan (mounted on the rear panel), see page 523.
3 Air partition, see page 521.



Air baffle

For controlled air flow in 7 U subracks. For mounting on subrack side panels with the aid of mounting blocks.

Material:
1 mm aluminium

Surface finish:
Anodised

Supply includes:
Assembly parts.

Injector/extractor handle type IV

Handles with micro-switch
For inserting and removing PCB's with a high connector pin-count.

- Insertion/removal function
- Integral microswitch for "live insertion" applications
- Sellf-activation of the micro-switch during insertion/removal
- ESD pin to dissipate static charges prior to making contact with the connectors and for precise positioning of the board type plug-in units
- Codeable
- Integral PCB attachment
- Self-locking
- Bayable

Handle without micro-switch
Description see above. Micro-switch may be retro-fitted.

Supply includes:
1 handle without or with micro-switch, assembly parts.

Note:

- Can only be inserted in conjunction with front horizontal rails, with 10 mm extension (B), see page 499.
- With 3 U, only one extractor handle is required.

Handle without micro-switch

Colour	Installation	Packs of	Model No. RP
Grey	Top	1	**3686.901**
Grey	Bottom	1	**3686.900**
Black	Top	1	**3686.903**
Black	Bottom	1	**3686.902**

Accessories:

Keying pins, see page 514.
Keyable guide rails, see page 510.
Micro-switch, see page 530.
Connector pin for baying, see page 529.

Injector/extractor handle type IV

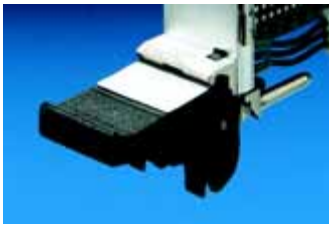
8 HP, bayed
Suitable for 4 HP front panels that must be connected to each other mechanically.

Supply includes:
2 bayed handles, fully assembled.

Colour	Installation	Packs of	Model No. RP
Black	Bottom	1	**3686.908**
Black	Top	1	**3686.909**

Accessories:

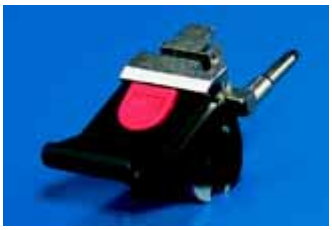
Connector pin for baying, see page 529.



Identification strips

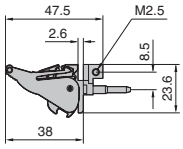
for type I, II extractor handle and type IV injector/extractor handle
Width 4 HP

Packs of	Model No. RP
100	**3684.328**



Injector/extractor handle type IVs

with push-button
For inserting and removing PCB's with a high pin-count. A metal insert ensures reliable functioning, even at forces of up to 815 N.



- Insertion/removal function
- Push-button for locking and unlocking the board type plug-in unit (cannot be extracted in the locked position)
- Optionally with 1/2 HP offset PCB attachment, e.g. for component mounting on both sides
- Optional micro-switch for "live insertion" applications
- ESD pin to dissipate static charges prior to making contact with the connectors and for precise positioning of the board type plug-in unit
- Codeable
- Integral PCB attachment
- Bayable

Material:
Plastic/metal

Supply includes:
Assembly parts.

Note:
- Insertion only in conjunction with front horizontal rails, with 10 mm extension (B), see page 499.
- With 3 U, only one extractor handle is required.

Handles without offset

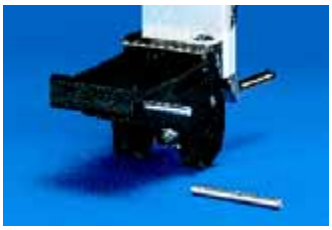
Installation	Packs of	Model No. RP
Top	1	**3688.770**
Bottom	1	**3688.771**

Handles with 1/2 HP offset

Installation	Packs of	Model No. RP
Top	1	**3688.772**
Bottom	1	**3688.773**

Accessories:

Keys, see page 514.
Keyable guide rails, see page 510.
Keyable guide rails with 1/2 HP offset, see page 511.
Micro-switch, see page 530.
Connector pin for baying, see page 529.



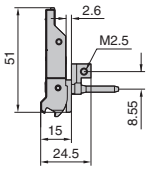
Connection pin

for injector/extractor handles, types IV, IVs and VII
The connection pin can be used to connect injector/extractor handles, types IV, IVs and VII.

Material:
Steel

Packs of	Model No. RP
20	**3685.319**

Front panels, handles



Injector/extractor handle type VII

Plastic (telecom)
For inserting and removing PCB's with a high connector pin-count. This handle was specifically designed for use in telecom applications.

- Insertion/removal function
- Optionally with 1/2 HP offset PCB attachment, e.g. for component mounting on both sides
- Minimum space requirements, due to fold-up handle
- Codeable
- Optional integral micro-switch for "live insertion" applications
- ESD pin to dissipate static charges prior to making contact with the connectors and for precise positioning of the board type plug-in unit
- Large labelling area on the front

Material:
Plastic

Supply includes:
Assembly parts.

Note:
Insertion only in conjunction with front horizontal rails, with 10 mm extension (B),
see page 499.

Handles without offset

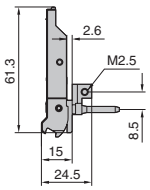
Installation	Packs of	Model No. RP
Top	1	**3688.784**
Bottom	1	**3688.785**

Handles with 1/2 HP offset

Installation	Packs of	Model No. RP
Top	1	**3688.780**
Bottom	1	**3688.781**

Accessories:

Keys, see page 514.
Keyable guide rails, see page 510.
Keyable guide rails with 1/2 HP offset, see page 511.
Micro-switch, see page 530.
Connector pin for baying, see page 529.



Injector/extractor handle type VII

Metal (telecom)
For inserting and removing PCB's with a high connector pin-count (up to 815 N). This handle was specifically designed for use in telecom applications.

- Insertion/removal function
- Optionally with 1/2 HP offset PCB attachment, e.g. for component mounting on both sides
- Minimum space requirements, due to fold-up handle
- Codeable
- Optional integral micro-switch for "live insertion" applications
- ESD pin to dissipate static charges prior to making contact with the connectors and for precise positioning of the board type plug-in unit
- Metal design for use in aggressive atmospheres

Material:
Die-cast zinc

Supply includes:
Assembly parts.

Note:
Insertion only in conjunction with front horizontal rails, with 10 mm extension (B),
see page 499.

Handles without offset

Installation	Packs of	Model No. RP
Top	1	**3688.790**
Bottom	1	**3688.791**

Handles with 1/2 HP offset

Installation	Packs of	Model No. RP
Top	1	**3688.786**
Bottom	1	**3688.787**

Accessories:

Keys, see page 514.
Keyable guide rails, see page 510.
Keyable guide rails with 1/2 HP offset, see page 511.
Micro-switch, see page 530.
Connector pin for baying, see page 529.

Micro-switch

For "live insertion" applications.
For mounting in type IV, IVs and VII injector/extractor handles.
May also be retro-fitted.

Technical specifications:
Switching load: 50 mA 30 V DC
Service life:
at nominal load: 30,000
mechanical: 50,000

Packs of	Model No. RP
10	**3684.410**

Also required:

Micro-switch mounting clip, see page 531.

Micro-switch

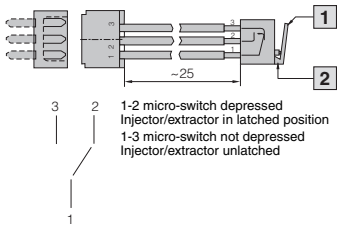
with cable and connector
For “live insertion” applications.
For mounting in type IV, IVs and VII injector/extractor handles.

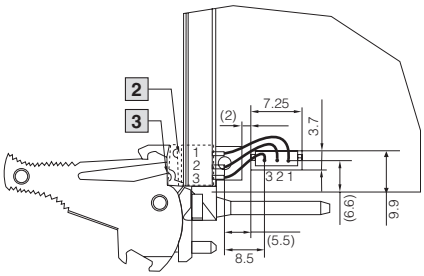
Supply includes:
Micro-switch, connector Type Molex 51021-0200, Mounting clips, 3 cables, 25 mm x #32 AWG, fully assembled.

Packs of	Model No. RP
1 set	**3686.536**

Also required:
Micro-switch mounting clip, see page 531.

1 Lever not depressed
2 Lever hinge
3 Lever contact point

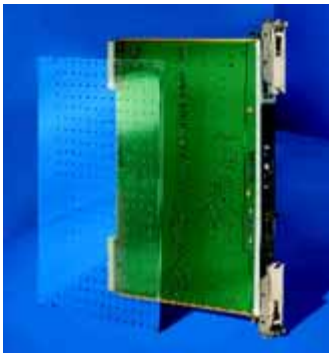




Micro-switch mounting clip

For mounting micro-switches in handles.

Packs of	Model No. RP
10	**3684.411**



Plastic covers

for PCBs
For mechanical protection of the solder side and of the EMC gaskets.
Attachment holes as per CPCI or VME-specifications. Optionally available as perforated or solid version.

Material:
0.3 mm plastic, antistatic

0.5 mm plastic, antistatic[1)], UL 94-V0

Front panels

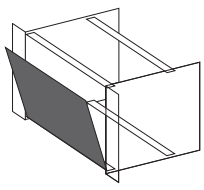
Hinged

Material:
2.5 mm aluminium, anodised

Supply includes:
1 front panel,
1 set of hinges,
assembly parts.



U	HP	Model No. RP vertically hinged	horizontally hinged
3	42[1)]	**3652.600**	**3652.500**

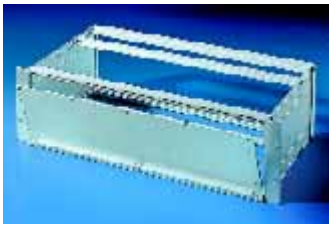
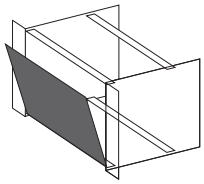
6	85	–	**3684.293**
7	85	–	**3684.294**
9	85	–	**3684.295**

Also required:

[1)] With rear mounting of 42 HP and 84 HP front panels, additonal trim sections must be attached at the rear of the subrack.
Trim sections, see page 497.

Front panels, handles





EMC front panels

Hinged

Material:
2.5 mm aluminium, clear-chromated

EMC

Supply includes:
1 front panel,
1 set of hinges,
1 contact strip,
1 gasket strip,
1 vertical EMC gasket, version 1,
assembly parts.

U	HP	**Model No. RP** horizontally hinged
3	84	**3684.298**
4	84	**3684.299**
6	84	**3684.300**
7	84	**3684.301**
9	84	**3684.302**

Mezzanine front panels

Die-cast zinc
For PCI mezzanine cards (PMC).

Conforms to IEEE 1386

Material:
Die-cast zinc

Packs of	**Model No. RP**
1	**3688.659**

Accessories:

EMC seals,
see page 540.
Assembly screws M2.5 x 6,
packs of 100 sets, Model No. RP 3654.340,
see page 576.

Mezzanine front panels

Extruded aluminium section
For PCI mezzanine cards (PMC).

Conforms to IEEE 1386

Material/surface finish:
Extruded aluminium section, clear-chromated

Packs of	**Model No. RP**
1	**3688.658**

Accessories:

EMC seals,
see page 540.
Assembly screws M2.5 x 6,
packs of 100 sets, Model No. RP 3654.340,
see page 576.

Support spacers

for mezzanine cards
10 mm, for mounting mezzanine cards.

Packs of	**Model No. RP**
1	**3688.663**

Front panels, handles

Covers

for mezzanine cutouts
To conceal unused mezzanine cutouts. The covers are simply clipped into the cutouts.

Material:
Stainless steel

Packs of	Model No. RP
1	**3688.660**

EMC seals

for mezzanine front panels
For inserting into the all-round channel of the mezzanine front panels.

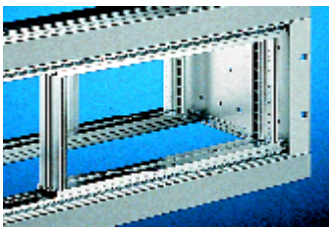
Material/surface finish:
Sealing ring made of conductive carbon filled silicon, sealing gasket made from stainless steel.

Option	Packs of	Model No. RP
Sealing ring	1	**3688.661**
Sealing gasket	1	**3688.662**

Keying pin

for mezzanine cards
To ensure the the correnct installation of mezzanine parent cards. The keying pins are bolted onto the parent boards.

Packs of	Model No. RP
1	**3688.664**

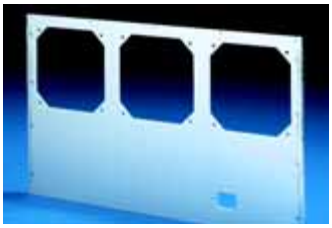


Door cutout trim

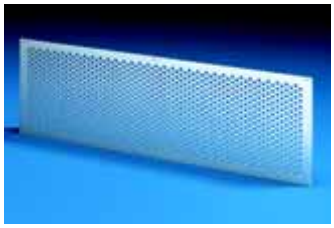
To conceal the cut-out edges when subracks are installed in the door.

Material:
Aluminium

Width	Packs of	Model No. UN
269.2 mm ($^1/_2$ 19″)	2	**3634.060**
482.6 mm (19″)	2	**3634.070**



Rear panels,
for fan installation,
see page 522.



Front/rear panels,
for ventilation,
see page 521.

Ripac box type plug-in units, type I

Technical specifications:
Installation depth: 160 and 220 mm
Height: 3 U and 6 U
to IEC 60 297-3,
to accommodate:
individual connectors

Material:
Front panel: 2.5 mm aluminium,
natural anodised
Rear panel: 2 mm aluminium, natural anodised
Side panel sections: Extruded aluminium section,
natural anodised
Handle: Aluminium, natural anodised.
PCB holder: Plastic

Available upon request:
- Box type plug-in units in special sizes or with printing
- EMC box type plug-in units with EMC front panels

Accessories:

Covers,
see page 545.
Guide rails,
see page 512.
Individual components,
see page 542.

Ripac box type plug-in units for drives

Vertical drive chassis

For the installation of drives or CD-ROMs.
May be installed in all Ripac subracks.

- Optionally prepared for EMC or non-EMC
- Accomodation for $3^1/_2$″ or $5^1/_4$″ drives or CD-ROM, vertical
- Front panel and support plate integrated

Material:
Front panel: 2.5 mm aluminium
Support plate: Aluminium

Surface finish:
Clear-chromated

EMC

Supply includes:
1 front panel with support plate,
1 EMC gasket (with EMC modules),
assembly parts.

Installation drives	Font panel		Depth drive approx. mm	Font panel cutout		Model No. RP

Guide rails

for drive chassis
For routing drive chassis in the subrack.

Material:
Aluminium

Supply includes:
Press-fit pin.

For installation depth mm	Packs of	Model No. RP
160	1	**3686.989**

Note:
Two guide rails are required for each drive chassis.

Also required:

Assembly screws,
packs of = 100, Model No. RP 3654.340,
see page 576.

PCB holder

for box type plug-in units
For fastening PCBs in box type plug-in units.

Material:
PBTP, basic material to UL-94-V0

Supply includes:
Assembly parts.

Packs of	Model No. RP
2	**3606.321**

Ripac box type plug-in units/installation

Covers

for type I and II box type plug-in units

Without vent slots
For slide-in fastening.

Material:
1.0 mm aluminium, untreated

With vent slots
For screw fastening.
Suitable for the installation of guide rails.

Material:
1.2 mm sheet steel, spray-finished

Colour:
RAL 9006

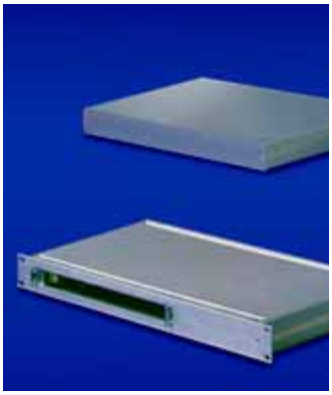
Instrument cases/system enclosures

Features

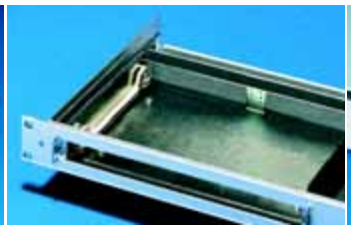
Alongside the Rittal Vario-Case iS, the classic instrument case with its wide range of application-related benefits, the RiCase instrument case stands out with its modern design. Particular features include the numerous colour variants and the all-metal enclosure construction.

The system enclosure (instrument case or rack-mounted enclosure) Ripac Vario-Module is fully compatible with the latest Ripac subrack range, making it ideal for individual configuration and assembly as a microcomputer system.



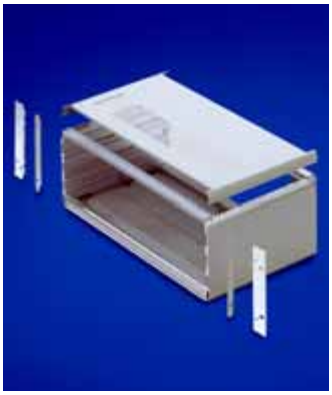
RiBox

System enclosure for horizontal installation of individual boards, hubs, routers and modems.



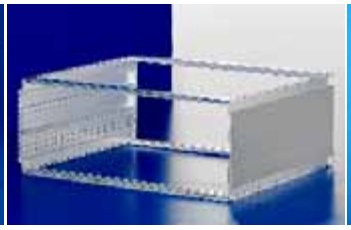
Mounting plate of sheet steel for individual population.

Installation kit for horizontal installation of boards.



Ripac Vario-Module

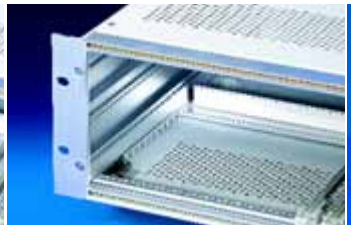
System enclosure
for direct installation of PCBs or board-type plug-in units.



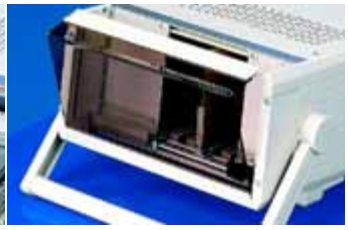
Basic enclosure
optionally for EMC or non-EMC applications and . . .

. . . individually configurable with cover plates.

Optionally with **corner trim** for configuration as an instrument case or . . .



. . . with **482.6 mm (19″) flanges** for configuration as a rack-mounted enclosure.

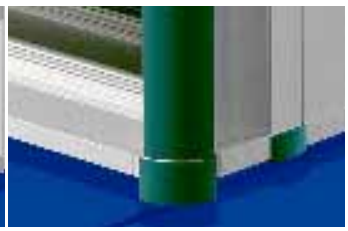


Acrylic glazed front doors, horizontally hinged, to protect built-in control components.

Features

Rittal RiCase

All-metal instrument case for 482.6 mm (19″) slide-in equipment
The perfect “safe” for valuable electronics. Extruded aluminium sections and die-cast elements form an extremely robust yet lightweight enclosure.



Stability and non-slip properties are guaranteed by 10 mm high corner caps. The distance from the desktop or from the lower enclosure offers excellent ventilation conditions.

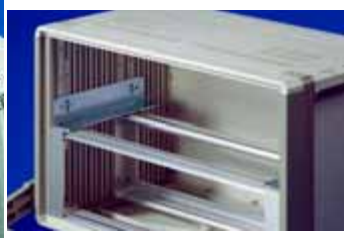
The styling and colours add **innovative design accents.** This emphasises the high value of the electronic fittings within.

Slide-in strips are simply pushed into a suitable profile channel, and any required attachment is supported.

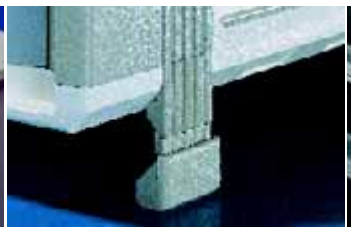
Natural convection from bottom to top, via optional perforations in the base and cover trays.

Rack-mounted fans provide forced ventilation.

Rittal Vario-Case iS



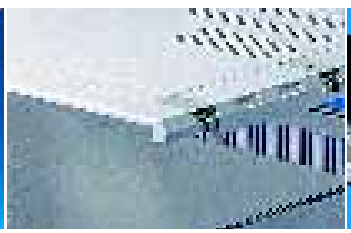
Instrument cases for the installation of slide-in equipment as well as modular assemblies and PCBs. The pitch pattern of channels in the side panels provides variable support attachments.



Twin **fold-out enclosure feet** in the base trays enable two different angles of inclination.

Stackability thanks to integral enclosure feet and recesses, even with different depths.

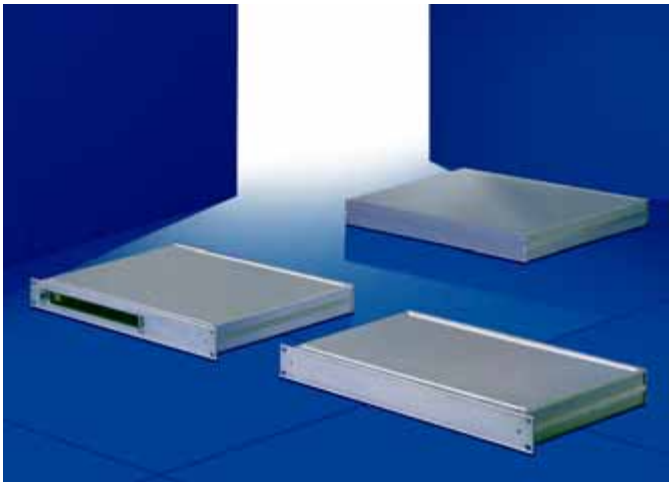
Versatile **handling options** with support stands, carrying handles and recessed handles.

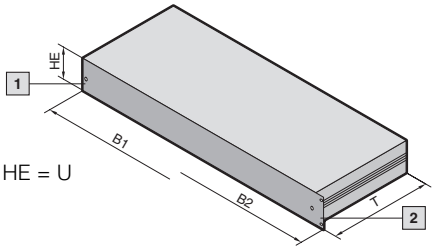


Concealed screw fastenings for an excellent design.

Individual climate control: Front panels with vent slots, vented base/cover trays, rack-mounted fans.

RiBox system enclosures 1 U





Technical specifications:
System enclosures 1 U, 150, 200, 250, 300, 350 mm deep
Easy to assembly with just 4 screws.
Optionally for use as an instrument case or 19″ rack-mounted enclosure,
Front panel to hold a an overlay to conceal the screws.
Maximum possible useful interior space.
Optional EMC upgrades with additional EMC gaskets.
Option of installing 1 VME or CPCI board horizontally.

Design:
System enclosure 1 U, to IEC 60 297-1.
Optionally available for 19″ rack-mounting in the enclosure or as an instrument case version.

1 Designed as desktop unit

2 Designed as rack

Material/surface finish:
Side panels:
Extruded aluminium section, untreated
Base/cover trays:
Aluminium, clear-chromated
Front/rear panel:
Extruded aluminium section, clear-chromated
Mounting plate:
Sheet steel

Detailed drawing,
see page 1159.

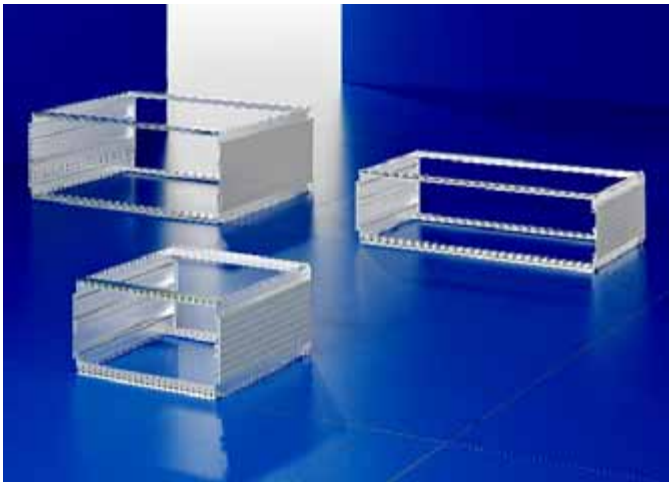
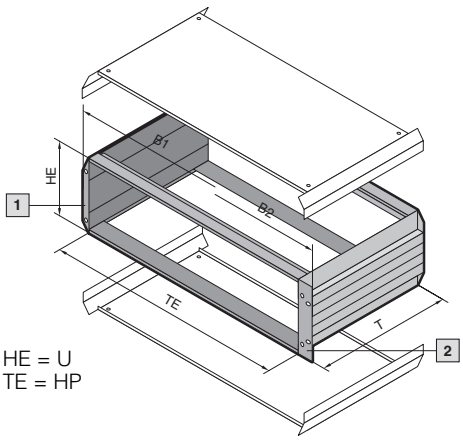
Ripac Vario-Module Page 555 **RiCase** Page 562 **Vario-Case** Page 569

Ripac Vario-Module 3 U, 4 U





Technical specifications:
May be used as a rack-mounted enclosure or instrument case. External dimensions to IEC 60 297-1 for installation in enclosures, 482.6 mm (19″). Installation dimensions for board type plug-in assemblies to IEC 60 297-3 and IEEE 1101.1/1101.10.

Material/Surface finish:
Side panels:
Extruded aluminium section, spray-finished in RAL 7035
Horizontal rails: Extruded aluminium section, clear-chromated
Corner trims: Die-cast zinc, spray-finished in RAL 7035
Side trims: Extruded aluminium section, spray-finished in RAL 7035

Protection category:
IP 40 for non-vented version.

Supply includes:
2 side panels,
4 horizontal rails,
4 threaded inserts,
2 rear corner trim pieces,
assembly parts.

1 Equipped as an instrument case

2 Equipped as a rack-mounted unit

Note:
Corner trim pieces, mounting flanges or top and bottom covers must be ordered separately.

Horizontal rails for further configuration must be ordered separately,
see page 498.

Detailed drawing,
see page 1160.

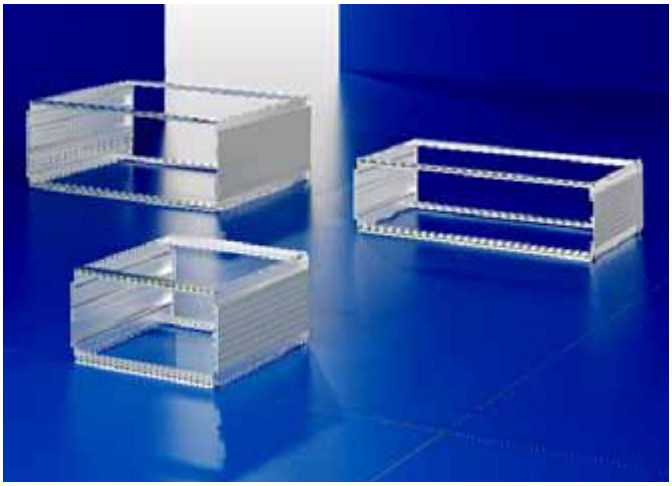
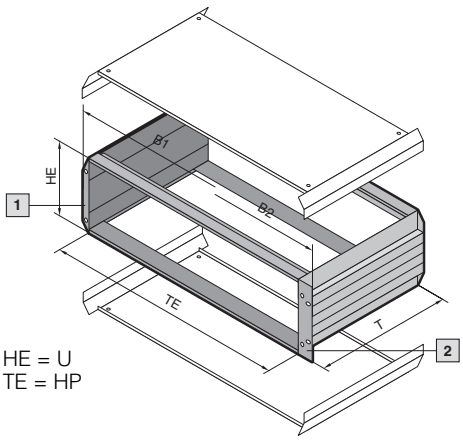
Ripac Vario-Module 3 U, 4 U EMC





Technical specifications:
May be used as a rack-mounted enclosure or instrument case.
External dimensions to IEC 60 297-1, for installation in enclosures, 482.6 mm (19″).
Installation dimensions for board type plug-in assemblies to IEC 60 297-3 and IEEE 1101.1/1101.10.

Material/Surface finish:
Side panels:
Extruded aluminium section, spray-finished in RAL 7035
Horizontal rails: Extruded aluminium section, clear-chromated
Corner trims: Die-cast zinc, Spray-finished in RAL 7035
Side trims: Extruded aluminium section, spray-finished in RAL 7035
Contact points: Conductive

Protection category:
IP 40 for non-vented version.

Supply includes:
2 side panels,
4 horizontal rails,
4 threaded inserts,
2 rear corner trim pieces,
assembly parts.

1 Equipped as an instrument case

2 Equipped as a rack-mounted unit

Note:
Corner trim pieces, mounting flanges or top and bottom covers must be ordered separately.

Horizontal rails for further configuration must be ordered separately,
see page 498.

Detailed drawing,
see page 1160.

6	2	**3981.230**	**3981.280**
7	2	**3981.240**	**3981.290**

Accessories:

EMC gaskets, vertical,
see page 506.
Front handles for mounting on front flanges,
see page 497.

Front corner trims

Required when the Ripac Vario-Module is to be used as a desk-top case.
The corner trims have a channel to accommodate vertical EMC gaskets.

Material:
Die-cast zinc

Colour:
RAL 7035

U	Packs of	Model No. VM
1	2	**3981.570**
2	2	**3981.300**
3	2	**3981.310**
4	2	**3981.320**
6	2	**3981.330**
7	2	**3981.340**
8	2	**3981.590**

Accessories:

Vertical EMC gaskets,
see page 506.
Front handles for mounting on front corner trim pieces, see page 560.

Front handles

For mounting on front corner trims

Maximum load capacity: 500 N

Material:
Cover: ABS
Handle part: Aluminium, clear-anodised.

Supply includes:
2 handle parts, 4 covers, assembly parts.

U	Packs of	Model No. VM
3	2	**3982.350**
4	2	**3982.360**
6	2	**3982.400**
7	2	**3982.410**

Carrying handles

For ergonomic transportation, even with stacked enclosures.
May also be used as a support stand.

Max. load capacity: 350 N.

Material:
Die-cast zinc and extruded aluminium section

Colour:
RAL 7035

Note:
Only for use with front and rear trims.

For enclosure depth	Packs of	Model No. VM
250.4 mm	2	**3981.350**
310.4 mm	2	**3981.360**
370.4 mm	2	**3981.370**
430.4 mm	2	**3981.380**

Ripac Vario-Module accessories

Rear feet

For mounting on the rear of the enclosure.
Dual function:
- Mechanical protection of the connection components.
- Also acts as a cable tidy during transportation.

Material:
PA, self-extinguishing to UL 94-V0

Colour:
RAL 7035

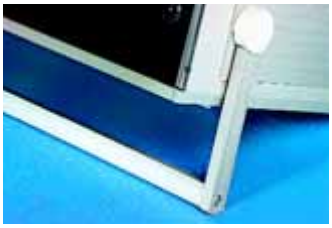
Packs of	Model No. VM
4	**3901.000**

Earthing set

For connecting the cover plates/gland plates to the side panels with PE conductors.

Supply includes:
Conductor cable green/yellow, 1.5 mm^2, with washer, flat-pin connector and assembly parts.

Packs of	Model No. RP
4	**3900.000**



Support stand/carrying handle

To fit Ripac Vario Module 3 U, 4 U and 6 U, adjustable on a 30° pitch pattern.

Material:
Extruded aluminium section/die-cast

Colour:
RAL 7035

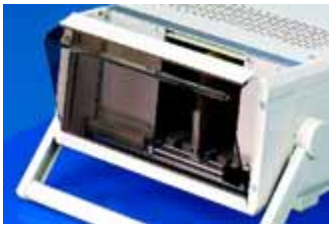
Supply includes:
Assembly parts.

Note:
Corner trim for support stands/carrying handles should be ordered separately.

For Ripac Vario-Module	Packs of	Model No. VM
42 HP	1	**3981.390**
63 HP	1	**3981.400**
84 HP	1	**3981.410**

German patent no. 41 10 873

Corner trim for support stand	Packs of	Model No. VM
3 U	2	**3981.310**
4 U	2	**3981.500**
6 U	2	**3981.510**



Acrylic front doors

horizontally hinged
For protection of built-in control components.

Material:
Side parts:
Aluminium, spray-finished in RAL 7035.
Window: Smoked acrylic

Supply includes:
Assembly parts.

U	For Ripac Vario-Module	Packs of	Model No. VM

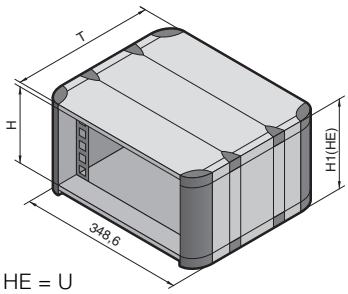
Front panels/rear panels

To cover the enclosures front and rear.
Also available as a hinged or EMC version.
Model No. see page 538/539.

Instrument cases/system enclosures

Rittal RiCase 269.2 mm ($^1/_2$ 19″)



HE = U

Technical specifications:
Depth:
300 mm, 420 mm, 540 mm
Installation width:
269.2 mm ($^1/_2$ 19″)
Installation options:
269.2 mm ($^1/_2$ 19″) slide-in equipment and modular assemblies to IEC 60 297-3

Material/surface finish:
Covers: Extruded aluinium section/die-cast, spray-finished
Side panels: Extruded aluinium section, spray-finished
Corner caps: Plastic
482.6 mm (19″) mounting bracket: Extruded aluminium section, clear-chromated

Colour:
RAL 7035 (pale grey)

Decorative colours and corner caps:
RAL 5018 (turquoise)
RAL 5012 (pale blue)
RAL 7030 (stone grey)

Protection category:
IP 42 for unvented version.

Supply includes:
2 side panels,
2 covers,
8 corner caps,
8/12/16 cover caps (300/420/540 mm depth),
4 482.6 mm (19″) mounting brackets,
4 tapped strips,
2 untapped strips,
1 rear wall
Enclosures are supplied partially assembled.

Special sizes and colours available on request.

Property rights:
German registered design no. 96 09 457

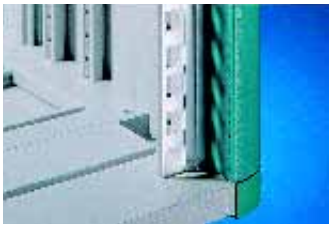
Rittal RiCase accessories



Mounting angles 482.6 mm (19 ″)

For front/rear installation of subracks and blanking plates.

Material:
Extruded aluminium section, clear-chromated

Supply includes:
Assembly parts.

Note:
1 pack of tapped strips and 2 packs of mounting rails and spacers are required for depth-adjustable installation.

For enclosure height	Packs of	Model No. RC
1 U	2	**3751.650**
2 U	2	**3751.660**
3 U	2	**3751.670**
4 U	2	**3751.680**
6 U	2	**3751.690**
7 U	2	**3751.640**
9 U	2	**3751.780**
12 U	2	**3751.790**

Also required:

Slide-in strips, see page 564.
Mounting rails, see page 564.
Spacers, see page 564.

Threaded inserts

with M4 thread
for RiCase, Vario-Case iS
For the installation of mounting brackets, slide rails, mounting kits, cable ducts etc. Simply slide into the channels in the side panels.

Material:
Extruded aluminium section, clear-chromated

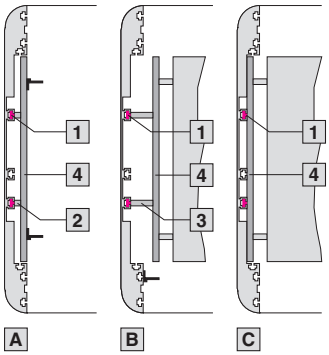
For enclosure height	Packs of	Model No. RC
1 U	8	**3751.700**
2 U	8	**3751.710**
3 U	8	**3751.720**
4 U	8	**3751.730**
6 U	8	**3751.740**
7 U	8	**3751.750**
9 U	8	**3751.760**
12 U	8	**3751.770**

Mounting rails

- For depth-variable installation of mounting angles
- For the installation of component shelves, static or pull-out

Material:
Aluminium, clear-chromated

Supply includes:
Assembly parts.



A Version for depth-variable mounting angles
B Component shelf installation for 482.6 mm/19″ (width 409 mm, also with telescopic slides)
C Direct component shelf installation (width 471 mm)

1 Slide-in strips
2 Short spacers
3 Long spacers
4 Mounting rails

For enclosure depth mm	Packs of	Model No. RC
420	2	**3751.410**
540	2	**3751.420**

Also required:

Threaded inserts, see page 564.
Spacers, see page 564.

Accessories:

Component shelf, see page 944.
Component shelf, 482.6 mm (19″), see page 939.

Spacers

For the attachment of mounting rails.

Version	Packs of	Model No. RC
Short for depth-variable mounting bracket	4	**3751.450**
Long for component shelf installation (width 409 mm)	4	**3751.460**

Rittal RiCase accessories

Slide rails

To support heavy installed equipment.

Material:
1.5 mm sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure depth mm	Packs of	Model No. RC
300	2	**3751.500**
420	2	**3751.510**
540	2	**3751.520**

Also required:

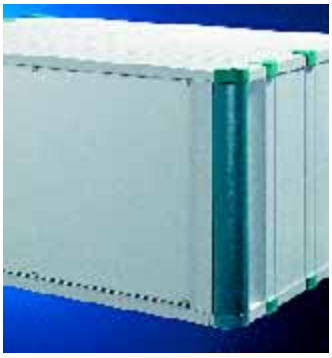
Threaded inserts,
see page 564.

Earthing set

for RiCase, Vario-Case iS
To meet electrical protective measures; fits all RiCase and Vario-Case iS enclosures.

Supply includes:
Threaded insert, screw, green/yellow connection cable, serrated washer, nut.

Packs of	Model No. VC
4	**3798.000**



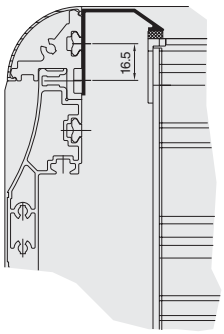
Rear trim

To cover the sides to the left and right of the sub-rack when no rear door or rear panel is used.

Material:
Extruded aluminium section, spray-finished

Colour:
RAL 7035

Supply includes:
Assembly parts.



For enclosure height	Packs of	Model No. RC
3 U	2	**3751.900**

Front doors, horizontally hinged

Acrylic

- For the protection of the installed control components
- Optional bottom or top hinges
- Fitted with security lock

Material:
Side panels: Extruded aluminium section/die-cast, spray-finished in RAL7030
Window: Smoked acrylic

Supply includes:
1 door, assembly parts.

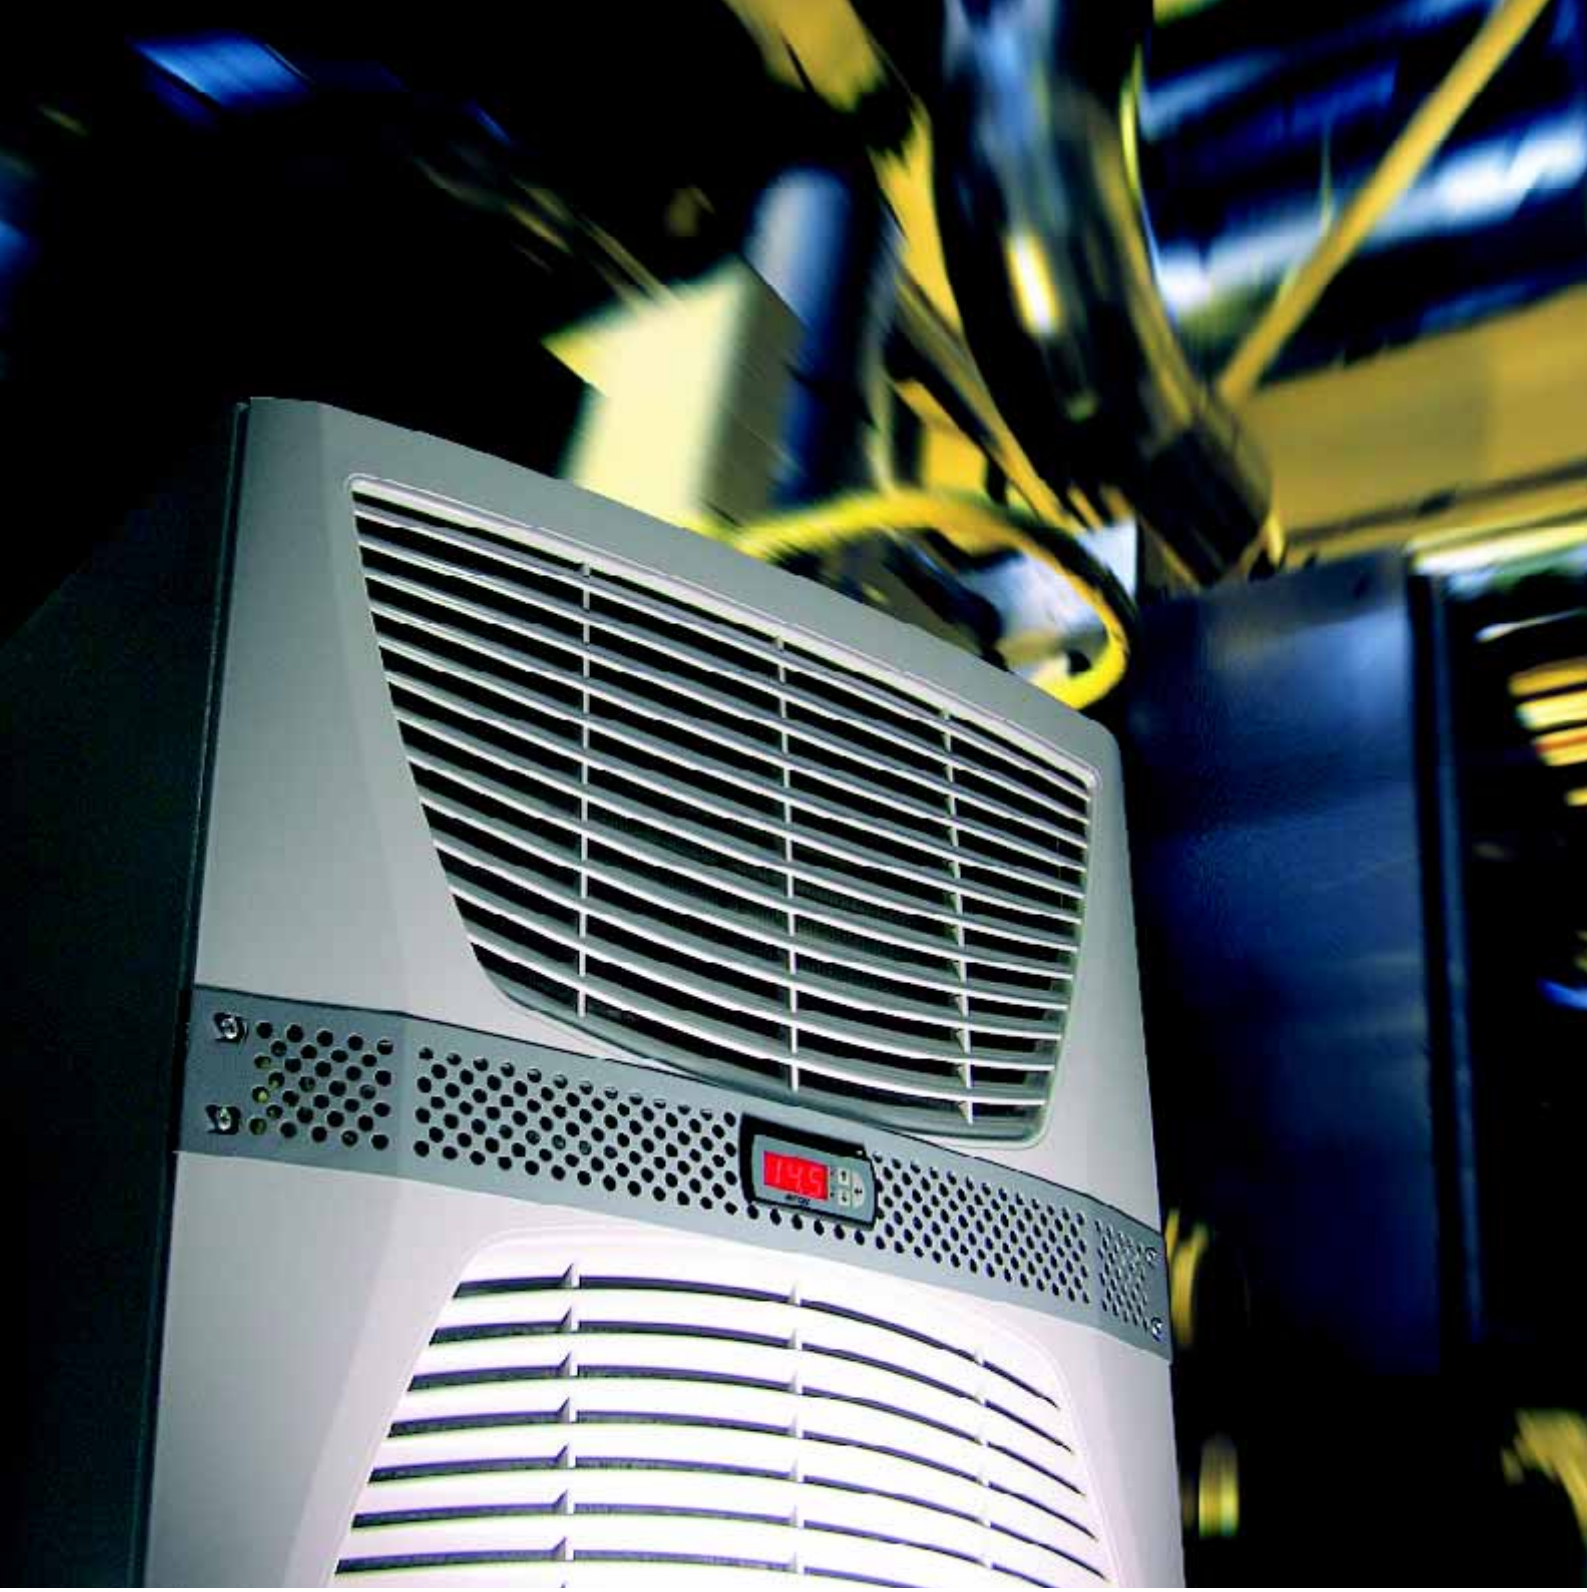
Assembly parts

For the attachment of	Description	Dimensions	Model No.	Packs of
Front panels to unit side panels	Oval csk-screw ISO 7047-4.8-Z-A2F	M3 x 8	**3606.550**	100
Rear panels to box-type plug-in units	Panhead posidrive screw ISO 7045-4.8-Z-A2F	M3 x 8	**3606.560**	100
PCB holders (plastic) to front panels, top	Oval csk-screw ISO 7047-4.8-Z-A2F	M2.5 x 10	**3606.610**	100
– Horizontal rails to side panels – Divider panels to horizontal rails – Horizontal rails to vertical supports	Panhead self-locking screw similar to DIN ISO 7045-8.8-Z-A2F	M4 x 12 	**3654.300**	100
– PCBs to PCB holders (die-cast for 3 U, 6 U), top – PCBs to extractor handles with 6 U	Panhead screw ISO 7045-4.8-Z-A2F	M2.5 x 8	**3654.320**	100
– PCB holder (plastic) to type V/VI handles, bottom – PCBs to PCB holders (plastic) – Backplanes to tapped strips	Panhead screw ISO 7045-4.8-Z-A2F	M2.5 x 10 	**3654.330**	100
– Connectors to Z rails – Z rails to horizontal rails – Type V/VI handles to partial front panels, bottom right for ≥ 5 HP – Aluminium guide rails to horizontal rails – Mezzanine front panels	Panhead screw ISO 7045-4.8-Z-A2F	M2.5 x 6	**3654.340**	100
Aluminium guide rails to horizontal rails (fastening of sqare nuts)	Retaining cage	M2.5	**9901.417**	100
Handle type V (plastic) to front panels and box type plug-in units	Mounting kit for type V handle (plastic): Cover black Cover grey Hex nut Screw Screw Square nut DIN 502-11H-A2F	 M2.5 M2.5 x 16 M2.5 x 12 M2.5	**3687.519**	1 set
Connectors to PCBs	Panhead screw ISO 7045-4.8-Z-A2F	M2.5 x 12	**3654.350**	100
Guide rails (plastic) to horizontal rails	Screw for plastic WN 1413	M2.2 x 6	**3654.360**	100
– Flat front panels to handles type V, VI – Aluminium guide rails to horizontal rails	Square nut DIN 562-A2F	M2.5	**3654.370**	100
– Flat front panels to horizontal rails – Trim frame to conceal the front sections of the horizontal mounting kit	Captive screws (cheese-head) and plastic collars	M2.5 x 11 	**3658.160**	100 set
Flat front panels	Plastic collars		**3687.021**	100
PCB to type III handle	Screw for plastic WN 1412	M3.0 x 8	**3658.190**	100
– PCBs to PCB holders (plastic) – PCB holders to front panels, top	Hex nut ISO 4032-8	M2.5	**3658.210**	100
– Backplanes to threaded inserts – Air partitions to horizontal rails	Mounting kit for backplanes: Panhead screw ISO 7045-4.8-Z-A2F Washer PE, natural DIN 125	 M2.5 x 6 2.7	**3684.019**	100
– Covers to mounting blocks – EMC contact profiles	Flat csk-screw ISO 7046-1-4.8-Z-A2F	M3 x 6	**3684.233**	100
Covers to side panels	Mounting block		**3684.234**	10
Type V/VI handle to front panels	Bracket		**3684.435**	100
Female connector to PCB attachment	Pop rivet DIN 7340-B-CuZn	2.5 x 0.3 x 10	**3684.482**	100
Ground contact to keyable guide rails	Fastening screw for ground contact	M3.5 x 12	**3684.109**	50

Assembly parts

For the attachment of	Description	Dimensions	Model No.	Packs of
Fans to fan mounting plate	Mounting kit for fans:		**3685.197**	1 set
	Flat csk-screw ISO 7046-1-4.8-Z-A2F	M4 x 12		
	Hex nut ISO 4032-8	M4		
	Serrated washer DIN 6797-A-Fst	4.3		
Covers to side panels	Mounting kit for covers:		**3685.256**	24 sets
	Mounting block			
	Flat csk-screw ISO 7046-1-4.8-Z-A2F	M3 x 6		
PCB holders (die-cast) to front panels, top	Oval csk-screw ISO 7047-4.8-Z-A2F	M2.5 x 8	**3685.282**	100
– Covers/box type plug-in units type I/II – Contact/spring sections for 3-part front panels	Flat csk-screw ISO 7046-1-4.8-Z-A2F	M2.5 x 5	**3685.289**	100
– Handles on front panels for box type plug-in units – Front panels to hinge strip	Flat csk-screw ISO 7046-1-4.8-Z-A2F	M2.5 x 6	**3685.290**	100
Holder (horizontal assembly kit) to horizontal rail	Flat csk-screw similar to ISO 7046-1-4.8-Z-A2F	M2.5 x 5	**3686.916**	100
Holder (horizontal assembly kit) to horizontal rail	Flat csk-screw similar to ISO 7046-1-4.8-Z-A2F	M2.5 x 8	**3686.917**	100
Contact and spring sections on 3-part front panels without countersink	Panhead csk-screw ISO 7046-4.8-Z-A2F	M2.5 x 5	**3686.924**	100
Recessed flanges to side panels	Mounting kit for recessed flanges:		**3687.015**	4 sets
	Panhead self-locking screw similar to DIN ISO 7045-8.8-Z-A2F	M4 x 8		
	Hex nut ISO 4032-8	M4		
	Washer	4.3		
Fastening the threaded inserts in horizontal rails	Grub screw ISO 7434-14H	M2.5 x 8	**3687.020**	100
– EMC front panels to horizontal rails – EMC trim frame to conceal the front sections of the horizontal mounting kit	Centering screw with slotted head	M2.5 x 11 	**3687.050**	100
EMC front panels to horizontal rails	Centering screw posidrive	M2.5 x 11 	**3687.051**	100
Front panels and rear panels to horizontal rails	Collar screw, cheese-hed slotted	M2.5 x 11	**3685.097**	100
Type V/VI handles (aluminium) to front panels	Mounting kit for type V/VI handles:		**3687.146**	1 set
	Panhead screw ISO 7045-1-4.8-Z-A2F	M2.5 x 6		
	Bracket			
	Square nut DIN 562-11H-A2F	M2.5		



Everyone talks about the future, but Rittal helps shape it – and that includes the field of climate control.

Development work focuses on the holistic **protection of process control with the minimum possible energy consumption.**

Modern cooling units with excellent efficiency and perfect interface technology, together with **liquid cooling concepts,** offer fresh new perspectives for the correct cooling of electronic components. This is crucial to the availability and reliability of machinery and IT technology.

For this reason, Rittal collaborates closely with you to develop customised climate control concepts.

System climate control

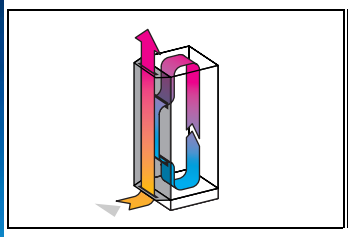
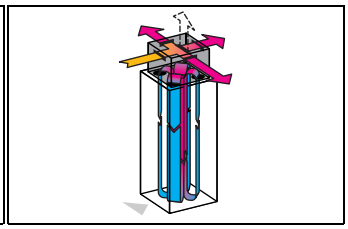
Features

Rittal system climate control offers holistic process protection. This includes the cooling of sensitive electronics in enclosures and cases for industrial process control, as well as server and network technology, regardless of the ambient conditions. But these are not isolated solutions – with Rittal, everything is interconnected. Perfectly linked and controlled cooling technology with eco-friendly, energy-efficient equipment.

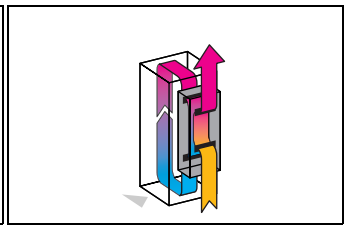
Selection criteria



Integral cooling technology
The unity of enclosure and cooling components achieves particularly effective cooling. Assembly time is eliminated. The investment costs for the complete unit offer exceptionally good value for money.



Roof-mounted cooling units
Requirement-oriented routing of cooling air in the internal circuit is possible, with up to four cold air outlet openings and the optional use of ducts. In the external circuit, the heated air is expelled to the rear, left and right, and optionally upwards. This means that there are no obstacles to bayed use and siting close to the wall.



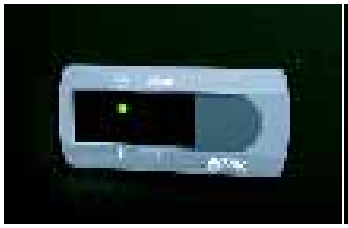
Wall-mounted cooling units
Depending on the space and design requirements, internal mounting, partial internal mounting and external mounting are all possible. Thanks to large distances between the air intake and outlet openings, effective cold air throughput of the enclosure is achieved.

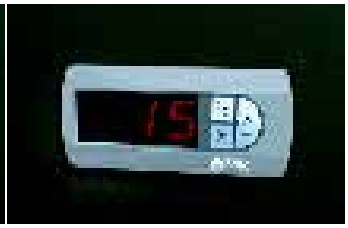
Intelligent control

The two controller variants for operational reliability offer a comprehensive range of functions. Essential control electronics are well protected and cooled in the inner circuit.

Both variants have the following properties:

- Three voltage options: 115 V, 230 V, 400/460 V 3~
- Integral start-up delay and door limit switch function
- Icing protection function
- Monitoring of all motors
- Phase monitoring for three-phase units





Basic controller:

- Visualisation of the operating status via LED display
- Switching hysteresis: 5 K
- Floating fault signal contact in case of overtemperature
- Setpoint adjustable from outside via potentiometer (setting range 20° – 55°C)

Comfort controller

- Switching hysteresis: 2 – 10 K preset to 5 K
- System alarm, individually configurable for 2 floating fault signal contacts
- Visualisation of the current enclosure internal temperature and all system messages on the display
- Storage of all system states in the log file
- Optional extension card for integration into superordinate remote monitoring systems e.g. with CMC

Features

Integral cooling technology

Infinite possibilities
The TS 8 Top enclosure system platform offers full compatibility in terms of baying techniques, lock systems and interior installation.

Fast exchange of the door and side panel
The symmetrical design means that the door hinge can be swapped very quickly to the opposite side, even with the designer climate control door.

Exchangeable in a flash
With all integrated cooling technology models, the cooling module can be very rapidly exchanged in just a few actions for servicing purposes.

Roof-mounted cooling units

Flexible performance
Only 3 mounting cutouts for 6 different output categories in 28 design variants.

Targeted air routing in the enclosure
The internal air circulation is targeted and effective: The heated air is extracted centrally. Air exhaust occurs in the four corners, depending on requirements.

Flexible condensate management
All roof-mounted cooling units with Comfort controller are equipped with condensate warning feature. A condensate pump and condensate evaporation may be integrated.

Wall-mounted cooling units

Wall-mounted cooling units – Practical and stylish
The mounting cutout is selected depending on the mounting variant: external, internal or partial internal mounting. This makes optimum use of the space available.

Effective air routing inside the enclosure
The large distance between the air inlet and outlet in the internal circuit makes wall-mounted cooling units particularly effective. This ensures optimum air throughput inside the enclosure, and air short-circuits are avoided.

Developed for easy servicing, inside and out
The assemblies, their arrangement and the divided internal case construction make all types of maintenance and servicing work much easier.

Benefits:

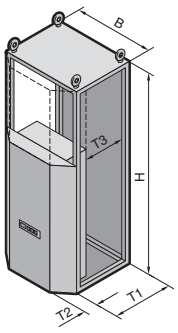
- Useful cooling output from 225 W to 4000 W
- Extensive control and monitoring features, even with the basic version
- Three-phase cooling units support multiple voltages as standard
- Uniform, output-related, cross-system mounting cutouts, to match TopTherm air/air heat exchangers
- Targeted, individual air routing
- No assembly work and low investment costs, thanks to the complete solution consisting of an enclosure and integral cooling unit[1)]
- May be integrated directly into TS 8 bayed enclosure suites[1)]

Important:

- Use a base/plinth of at least 100 mm height to ensure uninhibited air entry[1)]
- Avoid overloading the roof plate by using stays (see TS 8 system accessories)
- Air inlet and outlet openings in the internal and external circuit must not be obstructed.

[1)] Only for integral cooling technology.

Enclosures, single-door, useful cooling output 1100/1500 W



B = Width
T = Depth

Property rights:
German patent no. 196 09 794
European patent no. 0 886 994
with validity for ES, FR, GB, IT, NL, SE
Taiwanese patent no. N 11 05 287
US patent no. 6,134,109
South Korean patent
no. 3 295 093

Supply includes:
Enclosure frame with rear panel, roof and climate control door, including TS 8 hinges, door opening angle approx. 110°, spray-finished, including pre-assembled cooling module, r/h door hinge, may be swapped to opposite side, 4 eyebolts, pre-fitted, mounting plate, three-part gland plates, depth stay as shipping brace.

Also required:
For correct functioning of the external circuit:
Base/plinth, 100 or 200 mm high,
see page 835.

Optionally available:
Microcontroller control with
- digital temperature indicator,
- floating contact for collective fault signal,
- connection for door operated switch for start-up delay.

Automatic condensate evaporation.

Approvals,
see page 66.

Detailed drawing,
see page 1164.

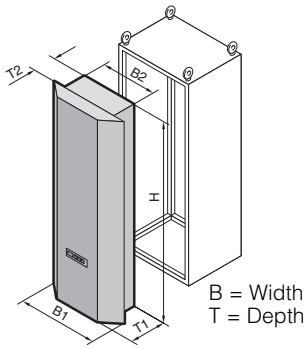
Climate control doors

Doors, for installing on 600 mm wide TS 8 enclosures, useful cooling output 1100/1500



B = Width
T = Depth

Property rights:
German patent no. 196 09 794
European patent no. 0 886 994
with validity for ES, FR, GB, IT, NL, SE
Taiwanese patent
no. N 11 05 287
US patent no. 6,134,109
South Korean patent
no. 0 299 406
Japanese patent no. 3 295 093

Supply includes:
Climate control door unit with pre-fitted cooling module, including TS 8 hinges, door opening angle approx. 110°.

Note:
Climate control doors for two-door TS 8 enclosures
see page 587/588.

Also required:
Base/plinth, 100 or 200 mm high,
see page 835.

Optionally available:
Automatic condensate evaporation.

Approvals,
see page 66/67.

Detailed drawing,
see page 1165.

Performance diagrams,
available on the Internet.

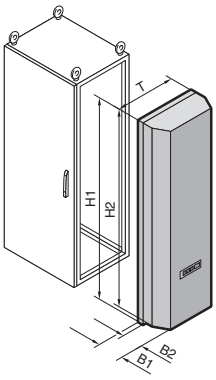
Panels, for installing on 600 mm deep TS 8 enclosures, useful cooling output 1100/1400



B = Width
T = Depth

Supply includes:
Climate control side panel with pre-fitted cooling module.

Also required:
Base/plinth, 100 or 200 mm high,
see page 835.

Optionally available:
Microcontroller control with
- digital temperature indicator,
- floating contact for collective fault signal,
- connection for door operated switch for start-up delay.

Automatic condensate evaporation.

Approvals,
see page 68.

Performance diagrams,
can be found on the Internet.

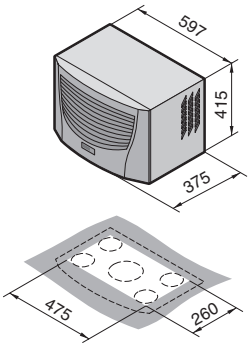
Roof-mounted cooling units

Useful cooling output 500/750 W



Property rights:
German registered design no. 402 02 324
German registered design no. 402 02 325

Supply includes:
Fully wired ready for connection, including drilling template and assembly parts.

Note:
Cooling units with Comfort controller may be integrated e.g. into superordinate remote monitoring systems by way of an optional interface board **SK 3124.200** (RS 232, RS 485, RS 422 and PLC interface).

Accessories:
Roof plate for TS 8 with mounting cutout, see page 664.

Optionally available:
With automatic condensate evaporation.

Approvals,
see page 68/69.

Detailed drawing,
see page 1166.

Performance diagrams,
available on the Internet.

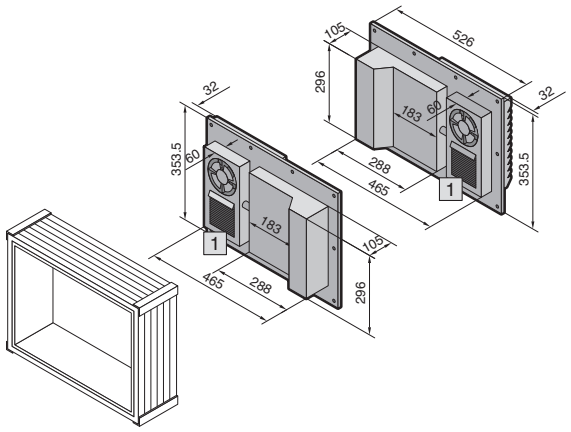
VIP small cooling units, useful cooling output 225 W



The new VIP small cooling units were developed especially for cooling the VIP 6000 command panel. In addition, VIP small cooling units also offer a space-saving, economical solution for the climate control of small enclosures where small heat loads are generated by the system.

Supply includes:
Fully wired ready for connection and pre-mounted on an aluminium rear panel to fit VIP 6000 operating housing 7 U.

Property rights:
German patent
no. 198 17 917

[1] **Distance from installed equipment at least 60 mm**

Approvals,
see page 69.

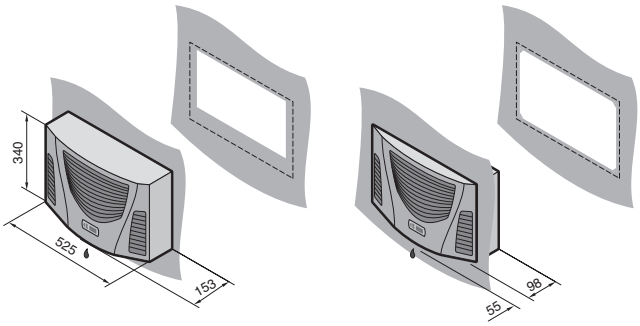
Wall-mounted cooling units

Mini cooling unit in horizontal format, useful cooling output 300 W



Mini cooling units in horizontal format, ideal for cooling small and operating housings with optimum space utilisation.

Supply includes:
Fully wired ready for connection, including drilling template and assembly parts.

Approvals,
see page 69.

Detailed drawing,
see page 1167.

Performance diagrams,

Fully wired ready for connection, including drilling template, eyebolt and assembly parts.

Note:
Integration of the cooling units with Comfort controller, e.g. into superordinate remote monitoring systems, can be achieved by means of an optional interface board **SK 3124.200** (RS 232, RS 485, RS 422 and PLC interface).

Optionally available:
With automatic condensate evaporation.

Also required:
For installation in the door, the use of a ride-up roller is recommended, see page 898.

Approvals,
see page 70.

Detailed drawing,
see page 1168.

Performance diagrams,
available on the Internet.

Design NEMA 4x, useful cooling output 2000/2500 W

Recooling systems

Features

Recooling systems ensure centralised, efficient cooling and provision of the cooling medium (generally water). For example, all cooling tasks on a system or machine can be solved via a single pipeline system. Spatial separation between cooling production and process cooling can be achieved with recooling systems.

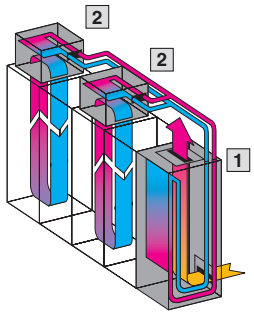
Application diversity of centralised cooling technology

Enclosure cooling
In conjunction with air/water heat exchangers, optimum dissipation of high heat loads is guaranteed, even under extreme environmental temperatures and air pollution.

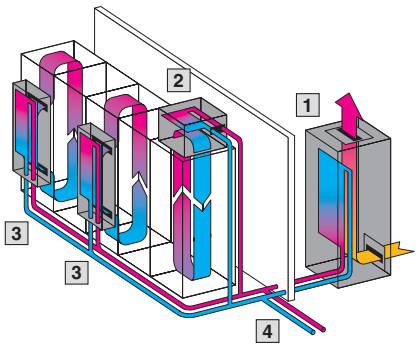
Cooling of liquid media
Direct and indirect cooling of liquids are the prerequisite for ensuring essential machine precision and speed.

Process cooling
High-quality material processing, such as laser cutting, necessitates high levels of temperature precision with simultaneous cooling of the peripheral technology.

Siting conditions



Unity with enclosures
For example, recooling systems may be attached directly to a bayed enclosure suite to provide effective, centralised cooling of all cases and enclosures on a machine or plant.



Spatially separated
High heat loads can even be dissipated in confined and awkward spaces, thanks to the spatial separation of the recooling system from the enclosures and machine. In all cases, as well as enclosure cooling, cooling water may also be produced for process and machine cooling or for cooling liquid media.

1 Recooling system
2 Air/water heat exchanger, roof-mounted
3 Air/water heat exchanger, wall-mounted
4 Further cooling options, e.g. machine cooling

Benefits:

- A single system for enclosure cooling, process and machine cooling, and the cooling of liquid media.
- Integration into bayed enclosure suites
- Individual project planning
- Commissioning and servicing

Important:

- Cooling output calculated at an ambient temperature of 32°C and an inlet temperature of 10°C and 18°C (water)/20°C (oil)

Project planning examples

Example 1

Production line

High-quality material processing requires a high degree of temperature precision with simultaneous cooling of the peripheral technology. This task – the cost-effective cooling of various equipment in the production line – is performed centrally by the recooling system in an industrial enclosure. It supplies the machine and process cooling with the required cooling water, as well as supplying the control enclosures via air/water heat exchangers.

Example 2

Test laboratory

Every single product is subjected to in-depth functional and quality testing at the in-house test laboratory. In order to ensure that the test process runs smoothly, the control enclosures are cooled via air/water heat exchangers, and the three test benches are supplied with the required cooling water in line with requirements. These diverse cooling tasks are performed by the recooling system integrated into the TS 8 Top enclosure system.
Visually, they form a single unit with the TS 8 control enclosures.

Example 3

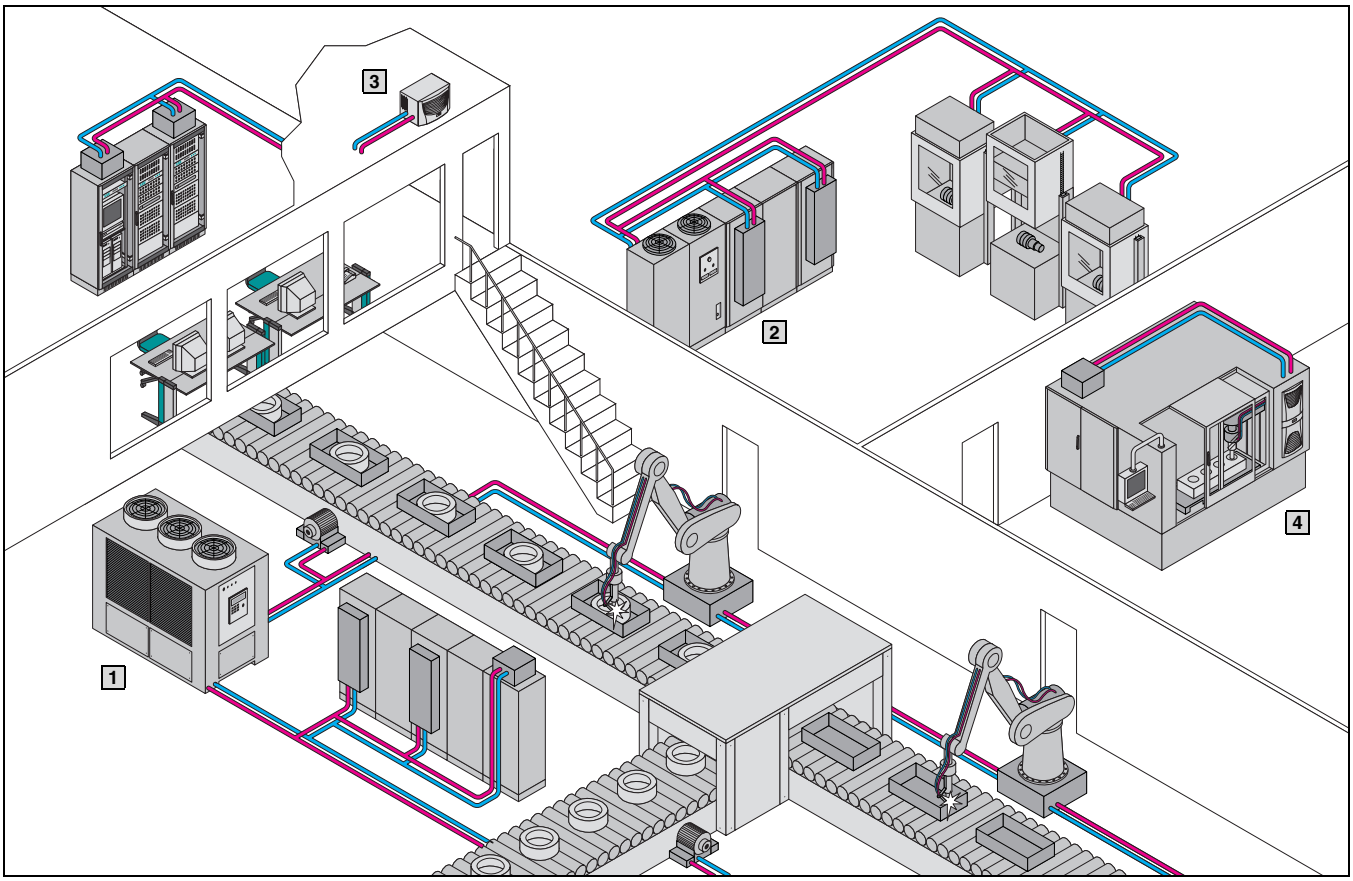
Control room

In conjunction with air/water heat exchangers, the server and network enclosures installed in the production control room are cooled by a Mini recooling system. To avoid contaminating the room air, and to facilitate optimum dissipation of the heat loss generated by the recooling systems, this is installed outside of the production control room.

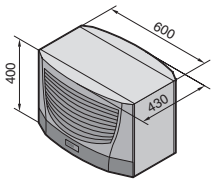
Example 4

Tool production

The heat loss generated during tool machining (e.g. by water-cooled motor spindles with high-frequency drives) must be dissipated efficiently. In such cases, this task is performed by a wall-mounted Mini recooling system which at the same time ensures cooling of the control unit, likewise integrated into the machine.



Mini, cooling output 960/1490 W



Technical design:
- Compact and modular layout of the cooling components on a base plate which functions as a collecting tray.
- Medium-conveying pumps.
- Precise temperature control, based on microprocessor technology.
- Collective fault signal with floating contact.
- Application-specific special equipment available on request.
- Pressure-sealed system (.600) or open system with tank (.610).

Supply includes:
Recooling system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

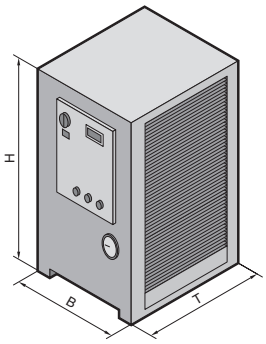
[1] Supports multiple voltages without rewiring.
Special voltages and technical modifications available on request.

Air/water heat exchangers From page 626 **Configuration software** Page 1063 **By-pass safety valve** Page 667 **Additives** Page 668

In floor-standing enclosure, cooling output 2100 to 7700 W



B = Width
T = Depth

Technical design:
- Robust industrial standard in 3 enclosure sizes.
- Identical basic enclosure for oil and water recooling systems.
- Spare space for the integration of special equipment.
- Variable air routing is possible via the l/h or r/h side panel.
- Floating contact for collective fault signal.
- Level monitor.
- Multi-coil vaporiser in the tank.

Supply includes:
Recooling system wired and plumbed ready for connection, with multilingual documentation including functional diagram and wiring plans.

Note:
The illustration shows units with customer-specific options.

Accessories:

Metal filter mats, castors, eyebolts and safety modules available on request.

Approvals,

Immersible recooling systems

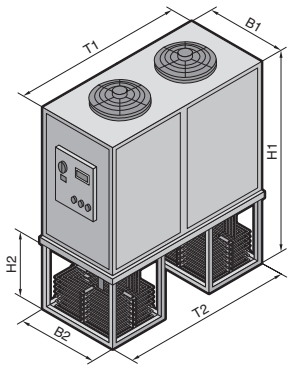
for oil, cooling output 20700 to 77900 W



B = Width
T = Depth

Technical design:
- For the cooling of oil
- Robust industrial standard in 3 enclosure sizes
- Flat evaporator coil insensitive to dirt
- Bi-frequency components (50/60 Hz)

Supply includes:
Immersible recooling system wired and plumbed ready for connection, **metal filter, eyebolts,** with multilingual documentation, including functional diagram and wiring plans.

Approvals,
available on the Internet.

Detailed drawing,
available on the Internet.

Layout diagram,

Configuration software Page 1063

Features of air/air heat exchangers

The requirement for use of **air/air heat exchangers** is that the ambient temperature must be below the enclosure internal temperature. Dust and any aggressive ambient air is unable to ingress the enclosure interior, thanks to the two separate air circuits.

The air of the enclosure interior may also be cooled to below the level of the external temperature by using **air/water heat exchangers** with a central recooling system. Dust is unable to penetrate the enclosure. The waste heat from the enclosure does not raise the temperature of the ambient air, provided the cold water supply system is spatially separated.

Platform strategy/installation

Identical installation cutouts
for various output categories.

Easily retro-fitted
Thanks to the low weight, simple assembly cutouts and problem-free attachment of the heat exchangers, a cabinet or enclosure is easily retro-fitted.

Servicing/security

Simple maintenance
The heat exchanger module is very easily removed, for effortless cleaning. The cleverly thought-out structure enables fast, economical maintenance.

Benefits:

- Specific thermal output from 17.5 W/K to 90 W/K
- External and internal circuit may be controlled separately
- Mounting cutouts and enclosure dimensions identical to TopTherm wall-mounted cooling units
- Suitable for external and internal mounting
- Top design identical to TopTherm wall-mounted cooling units

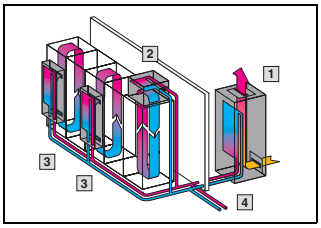
Important:

- The temperature difference between the room temperature and enclosure internal temperature will have a decisive effect on the heat loss that may be dissipated.

For calculation bases, refer to our website: www.rittal.com

Features of air/water heat exchangers

Even suitable for use in extreme conditions



Example: Parallel connection of air/water heat exchangers with cold water supply via a recooling system.

Overflow valves and bypass control should be integrated into the recooling system and the customer's own pipeline system respectively.

1 Recooling system

2 Air/water heat exchanger, roof-mounted

3 Air/water heat exchanger, wall-mounted

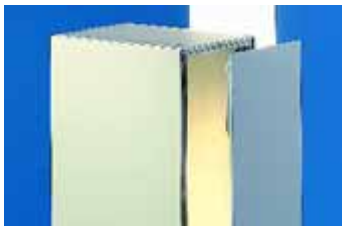
4 Additional cooling water circuit for machine cooling

Ideal for any location
If direct dissipation of heat loss to the ambient air is not desired or ineffective due to confined spaces, the air/water heat exchanger may provide the ideal solution. Particularly by spatially separating the exchanger from the recooling system, highly individual and effective solutions for cooling individual enclosures or bayed enclsosure suites can be achieved.

Variants

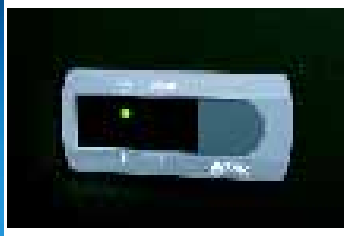
Roof mounting
Especially for bayed enclosures, where wall-mounted devices would obstruct the door.

Wall mounting
For mounting on the wall or any sufficiently large vertical surface.

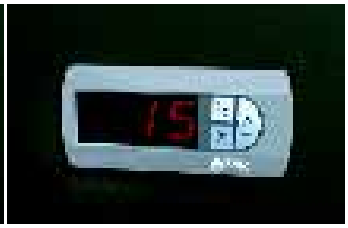


Side panel
Economical use: Air/water heat exchanger as a side panel in the TS 8 enclosure system.

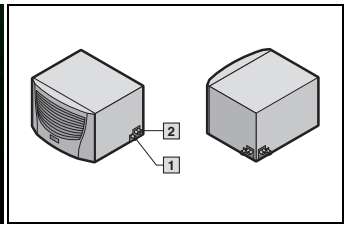
Controller



Basic controller:
- Visualisation of the operating status via LED display
- Switching hysteresis: 5 K
- Floating fault signal contact in case of overtemperature
- Setpoint adjustable from outside via potentiometer (setting range 20° – 55°C)



Comfort controller
- Switching hysteresis: 2 – 10 K preset to 5 K
- System alarm, individually configurable for 2 floating fault signal contacts
- Visualisation of the current enclosure internal temperature and all system messages on the display
- Storage of all system states in the log file
- Optional extension card for integration into superordinate remote monitoring systems e.g. with CMC



Flexible water logistics and condensate management
Any condensate arising is discharged via one of the two tube connectors ($^1/_2$″) and a discharge hose, which should be laid with a gradient ensuring that there are no kinks. In order to avoid increased condensation, the cooling water temperature should be adapted to match the required cooling output.

1 Condensate discharge (flexible)

2 Cooling water connection (flexible)

Benefits:

- Useful cooling output from 600 W to 5000 W
- Suitable for use even in extreme conditions and ambient temperatures up to +70°C
- Also available with all water-carrying parts made from V4A
- System for TS 8 integrated into the side panel

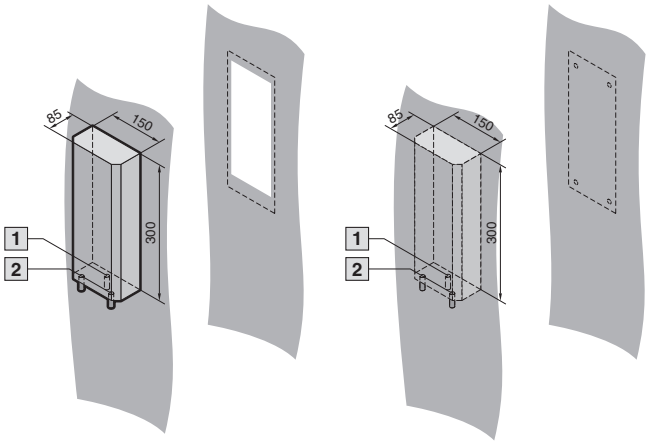
Important:

- Air/water heat exchangers should always be used in conjunction with recooling systems or a cooling water circuit

For calculation formulae and requirements regarding water quality, refer to our website: www.rittal.com

Air/water heat exchanger

Micro, wall-mounted, useful cooling output 300 W



Especially for selective cooling of hotspots in small enclosures.

Supply includes:
Fully wired ready for connection, including drilling template and assembly parts.

1 Condensate discharge
2 Cooling water connection (quick-release fastener)

Approvals,
see page 75.

Detailed drawing,
see page 1178.

Accessories Page 657 **Configuration software** Page 1063

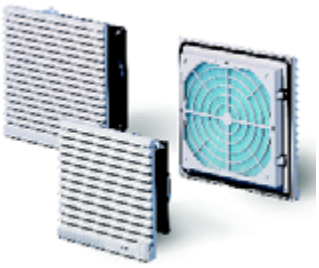
Features

Fan-and-filter units are ideal for dissipating high heat loads cost-effectively. The pre-requisite is that the ambient air must be relatively clean with a temperature below the desired enclosure internal temperature.

The entire range of fan-and-filter units is now also available with EMC shielding and all required rated voltages.



Fast assembly

Super-fast clip-on mounting
This guarantees fast, completely secure attachment of the fan-and-filter unit. The pre-requisites for protection category IP 54 are met as standard.

Screws are not required. Removal of the louvred grille, likewise without any screws, means that filter mat changes can be achieved in next to no time.

Blowing or extracting?
The air direction may be quickly reversed from blowing (standard setting) to extracting. Simply rotate the fan through 180°.

Application diversity and functions

Not always full power!
At lower ambient temperatures, the air throughput may be reduced. By adapting the fan-and-filter speed to match the temperature using a controller, noise generation is reduced.

Also available with EMC shielding
All fan-and-filter units and outlet filters are alternatively available with EMC shielding.
The required conductive connection is achieved via a metallic coating on the fan-and-filter unit housing and a special sealing frame.

Hosed water protection
Particularly for applications in the food industry, the hose-proof hood prevents the ingress of damp. The protection category of IP 56 is achieved in conjunction with filter mats.

Benefits:

- Air throughput of 20 m^3/h to 700 m^3/h
- Super-fast assembly
- IP 54 as standard
- Air flow direction may be reversed from extracting (standard setting) to blowing
- All fans also available with EMC shielding

Important:

- The prescribed heat loss and the maximum anticipated ambient temperature define the required volumetric flow
- Always use the fan-and-filter units and outlet filters together

For calculation formulae refer to our website: www.rittal.com

Fan-and-filter units

Air throughput 20/55 m³/h

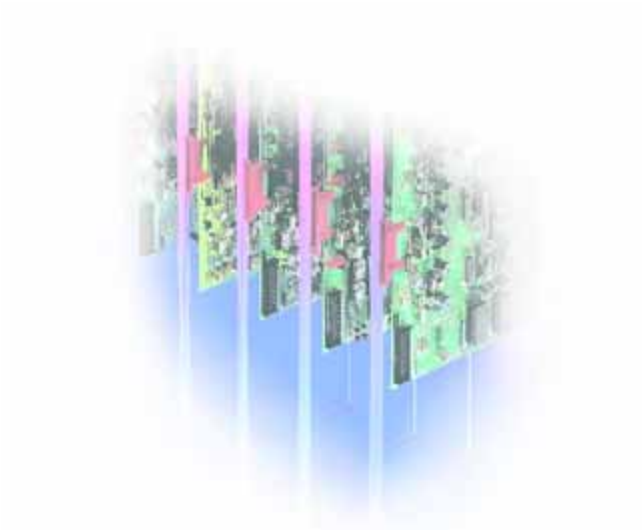
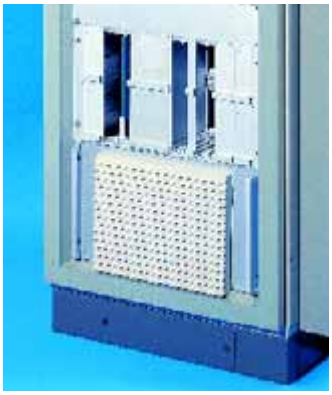
Climate control tailored to enclosures

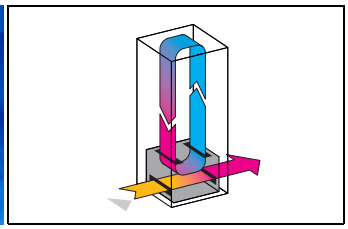
Features



All rack-mounted climate control components are mounted directly on the 482.6 mm (19″) mounting angles. Positioning directly beneath the electronic components ensures effective cooling, and prevents the formation of hot spots.



Rack-mounted cooling units



Useful cooling output 1000 W, 6 U
The heated air is drawn in, cooled, and blown out underneath the electronic equipment being cooled.

Simple attachment to the 482.6 mm (19″) mounting angles
Sealed enclosures require a door cutout for the external air circuit.

With open enclosures, a fully equipped front is essential. The setpoint of the temperature controller is set via a service flap.

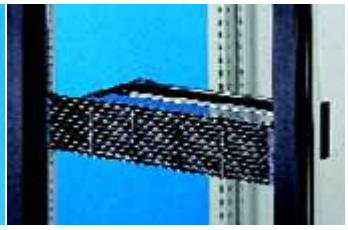
Rack-mounted fan

Vario rack-mounted fan
The rack-mounted fan slides into the guide frame like a drawer. Connectors on the rear ensure immediate contact.

Installation options for the guide frame: Directly in the subrack, via two mounting brackets on the 482.6 mm (19″) mounting angles.

Ideal for avoiding hot spots in fully populated enclosures.

Centrifugal fan



320 m³/h air throughput, 2 U
The high air throughput means that Rittal centrifugal fans are capable of dissipating large heat losses from the enclosure. The minimal noise generation of 52 dB creates a pleasant working environment.

Front outlet grille 2 U for hot air outlet to the outside in the upper section of the enclosure.

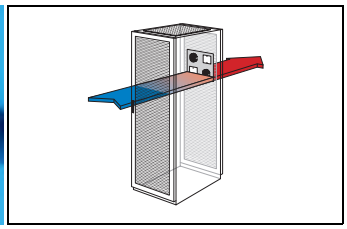
Features

Ready-to-use, wired modules equipped with fans for numerous Rittal enclosure system platforms offer effective air throughput and minimal assembly work. Fan roofs, fan cross members for server enclosures (door installation), internal fan mounting panels and enclosure internal fans are all available.

Fan for integration into the door

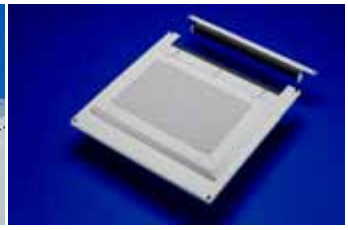
For TS 8: Door mounted fans for server enclosures
Specifically for installation in the tubular door frame of perforated doors.

Door mounted fans for TS 8 server enclosures
Specifically for installing in perforated doors. The growing packaging density in data communications and network enclosures means that active, direct ventilation of the enclosure has become indispensable. The door-mounted fans, attached to the rear or front door, support horizontal air routing of the servers.



Fans for integration into the roof

For all enclosures: Roof-mounted fans, passive or active
May be integrated into any enclosure roof area with suitable dimensions for the mounting cutout.



For TS 8: Fan roof, modular
In exchange for the existing roof plate. Fan and cable entry are pre-integrated.

For the office sector: Roof-mounted fan
Low noise generation and high performance for sensitive office areas. Unit consisting of TS roof plate and fan.

Air baffle systems

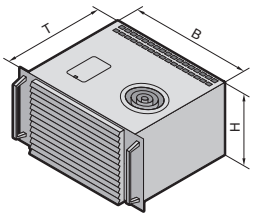
For TS 8: Internal fan mounting panel
Twin-walled side panel for targeted air routing.

Enclosure internal fan
Supports active climate control components and thereby selectively avoids hot spots.

For TS 8: Air baffle system
Cold air from the hollow base is routed to the twin-walled door and distributed in a targeted manner.

Rack-mounted cooling units

for 482.6 mm (19″), useful cooling output 1000 W



B = Width
T = Depth

Supply includes:
Wired ready for connection with connection cable (3 m), including drilling template.

Also required:
For installation in a closed enclosure:
Adaptor for front air supply and air duct for waste air, see Accessories.

Approvals,
see page 78.

Detailed drawing,
see page 1182.

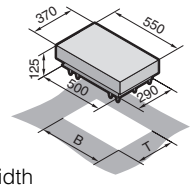
Roof-mounted fan and vent attachment

for TS

The active roof-mounted fan and the passive vent attachment (TS 8801.380) integrate perfectly into the system-wide mounting concept of Rittal system climate control. They fit precisely onto the cut-outs of the small and medium performance category of TopTherm roof-mounted cooling units.

Of course, they may also be mounted on any sufficiently large roof surface.



B = Width
T = Depth

TS roof plates with prepared mounting cutouts are additionally available.

Roof-mounted fan supply includes:
Unit ready to connect with built-in radial fan, sealing material and assembly parts.

Vent attachment:
see page 664.

Protection category:
IP 43 to EN 60 529/10.91

Detailed drawing,

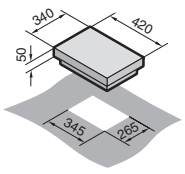
Roof-mounted fan

- The roof-mounted fan is easily installed using 6 screws. The sealing tape supplied can be used to seal it against the enclosure.
- The assembly screws are invisible from the outside.
- The roof-mounted fan casing has a large air outlet surface and labyrinthine air ducting.



Protection category:
IP 43 to EN 60 529/10.91. By additionally installing the filter holder with filter mat SK 3175.000, with roof vent SK 3148.000 a protection category of IP 44 is achieved.

Supply includes:
Fully wired unit ready for connection with built-in radial fan, sealing material and assembly parts, connection cable (3 m), drilling template.

Accessories:

Filter holder,
see page 667.

for TS/FR(i)

Roof-mounted fan

for TS/FR(i) for the office sector

This new roof ventilation concept offers a wealth of performance, assembly and cost benefits associated with the use of integrated ventilation systems. This roof-mounted fan may be ordered with and without a roof plate. Another outstanding feature is the enormous volumetric flow in proportion to exceptionally low noise levels, making it ideal for use in sensitive office areas.

Technical specifications:
- Fitted onto a roof plate based on TS.
- Easy assembly; the work of creating mounting cutouts has been eliminated altogether.
- Radial fan.

Supply includes:
Fully wired ready for connection, including assembly parts.

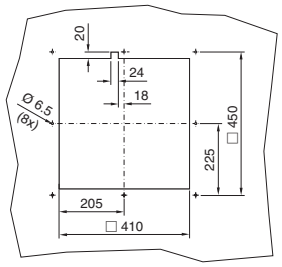
B = Width
T = Depth

Mounting cutout
only required for fans without roof plate



TS 8 air baffle system

The system has an air inlet nozzle in the base frame. In this way, cold air may be drawn in from below. The air is routed into the twin-walled door. The cold air can then be distributed inside the rack with special covers. 15 covers are supplied with every door.

Colour:
RAL 7035

	Packs of	**Model No. DK**
TS 8 sheet steel door, twin-walled W 600 x H 2000 mm	1	**7766.520**

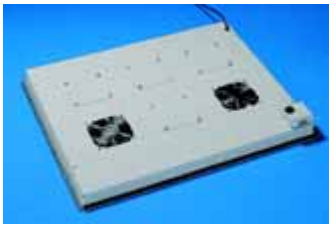
Air inlet nozzle W 600 mm	1	**7766.500**



Fan mounting plate

for TS

The fan mounting plate may be retrospectively installed in all TS 8 network enclosures from above. The plate is mounted at the front of the enclosure, whilst the rear section is left free for cable entry. A rubber cable clamp strip is supplied loose for optimum sealing at the rear and sides, to ensure targeted air routing.
Not suitable for crane transportation!
Not suitable for combination with 482.6 mm (19″) mounting frame.

The following combinations are possible:
- Solid roof plate raised with 20 or 50 mm roof spacers.
- Roof plate for cable entry raised with 20 or 50 mm roof spacers.
- Vented roof plate for cable entry.

In conjunction with the large swing frame, usage is only possible from an enclosure depth of 800 mm, in conjunction with a roof plate for cable entry from 900 mm.

The air throughput can be increased with the fan expansion kit DK 7980.000.

Technical specifications for one fan:
Rated operating voltage: 230 V
Power consumption: 15/14 W at 50/60 Hz
Air throughput (unimpeded air flow):
160/180 m^3/h, 50/60 Hz
Temperature range: –10°C to +55°C

Technical specifications of thermostat:
Rated operating voltage: 250 V
Temperature range: +5°C to +55°C

Colour:
RAL 7035

Supply includes:
2 fans, 2/4 cutouts to extend to 4/6 fans, thermostat optionally for attachment to the fan mounting plate or to the 25 mm DIN pitch pattern of the enclosure,
Rubber cable clamp strip.
Thermostat and fan fully wired to connection cable (2.5 m).

Accessories:

Fan expansion kit, see below.

Fan expansion kit

For retro-fitting various fan units or to supplement the fan mounting plate and fan roof, modular.

Technical specifications DK 7980.000:
Rated operating voltage: 230 V~
Power consumption: 15/14 W at 50/60 Hz
Air throughput (unimpeded air flow):
160/180 m^3/h, 50/60 Hz
Noise level (unimpeded air flow): 37 dB (A)
Temperature range: –10°C to +55°C

Technical specifications DK 7980.100:
Rated operating voltage: 230 V~
Power consumption: 14/12 W at 50/60 Hz
Air throughput (unimpeded air flow):
108/120 m^3/h, 50/60 Hz
Noise level (unimpeded air flow): 34 dB (A)
Temperature range: –20°C to +70°C

Technical specifications DK 7980.148:
Rated operating voltage: 48 V (DC)
Power consumption: 7.7 W
Air throughput (unimpeded air flow): 184 m^3/h
Noise level (unimpeded air flow): 42 dB (A)
Temperature range: –20°C to +70°C

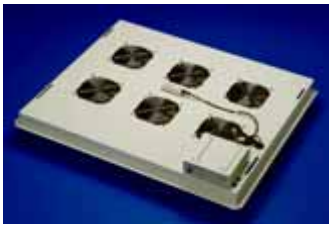
Supply includes:
Fan, including assembly parts and connection cable (0.61 m).

DC fan mounting plate



DC fan mounting plate

for TS

Exceptionally low-noise thanks to FCS speed control, fully fitted
Suitable for TS 8 enclosures with a raised roof (> 20 mm) or TS 8 roof plate, vented. The fan mounting plate may be used as an alternative to fan mounting plate 7988.035. It is installed from above. A cable entry is prepared in the rear section of the plate.
Not suitable for combination with 482.6 mm (19″) mounting frame.

Advantages of the DC fan mounting plate with FCS technology:

- Exceptionally low-noise thanks to speed control.
- All fans are individually monitored for failure.
- High air throughput thanks to DC technology (unimpeded air flow 6 x 165 m^3/h = 990 m^3/h).
- EMC-compatible thanks to DC fan.
- Temperature monitoring and control.
- High level of safety thanks to low safety voltage with 24 V DC power pack.
- Visual and acoustic alarm messages, plus relay alarm output.
- Freely selectable installation location for the FCS control unit (included with the supply of the fan mounting plate, in 482.6 mm (19″) with 7320.440 or on the frame with 7320.450).
- Suitable for international use, thanks to wide-range power pack 100 – 240 V AC and socket to IEC 320.
- Fully pre-configured.
- Network-compatible via CMC-TC processing unit 7320.100 (all relevant data such as temperature etc. are displayed in the web browser, or alarms are sent in the form of an SNMP trap).

For enclosures width mm	For enclosures depth mm	Number of DC fans	**Model No. DK**
800	800 900 1000	6	**7858.488**

Technical specifications:
Power pack rated voltage:
100 – 240 V AC, 50/60 Hz
Power pack rated current: Max. 1.5 A
Power pack secondary range: 24 V DC, 3 A
Temperature range: +5°C to +40°C
Total air throughput (unimpeded air flow):
6 x 165 m^3/h = 990 m^3/h

Technical specifications for one fan:
Rated voltage: 24 V DC
Rated current: max. 0.28 A
Rated output: max. 6.72 W
Air throughput (unimpeded air flow): 165 m^3/h
Speed: 2650 rpm
Noise level: up to 41.0 dB (A)
at maximum speed activation

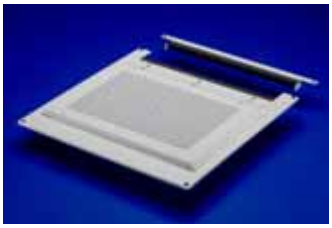
Also required:

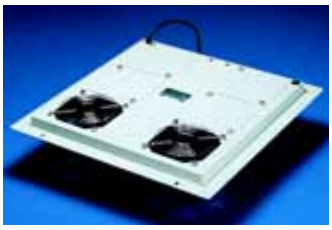
Connection cable 230/115 V.
Example D version, Model No. 7200.210,
see page 771.

Accessories:

1 U mounting unit, Model No. 7320.440,
see page 771.
Mounting module, Model No. 7320.450,
see page 772.

Note:
For more information on the FCS system,
see page 786.





Fan roof, modular, two-piece

for TS/FR(i)

The modular roof plate consists of individual components and can be configured for the ventilation of TS 8 enclosures in line with requirements.
The modules:

Roof plate, two-piece with cutout
For fan mounting and cable entry at the rear via a sliding angular bracket with rubber cable clamp strip. In exchange for the existing roof plate. The two-piece design allows convenient retrofitting of cables at any time.

Cover plate
To cover the cutout, optionally solid or vented. The top-mounted cover plate may be raised for extra air throughput using the supplied spacers.

Fan insert
For active ventilation:
A fully pre-wired fan tray including 2.5 m connection cable, with two fan motors and additional cutouts. The air throughput may be increased with a fan expansion kit.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Technical specifications for one fan:
Rated operating voltage: 230 V
Power consumption: 15/14 W at 50/60 Hz
Air throughput (unimpeded air flow):
160/180 m^3/h at 50/60 Hz
Temperature range: –10°C to +55°C

Detailed drawing,
see page 1183.

Accessories:

Fan expansion kit DK 7980.000,
see page 649.
Thermostat SK 3110.000,
see page 661.
Speed control SK 3120.000,
see page 662.

Fan unit, active

for TE

For active ventilation of the TE 7000, a ventilation opening may be broken out of the front area in the standard roof plate and fitted with the fan module. The fan module is pre-wired ready for connection and has 2 fans, 1 thermostat and a connection cable including IEC 320 connector. An additional fan may optionally be integrated.

Supply includes:
Fan unit including assembly parts, 2 fans, thermostat and connection cable.

Technical specifications for one fan:
Fan extension kit, see page 649.

Technical specifications of thermostat:
Rated operating voltage: 250 V
Temperature range: +5°C to +55°C

For enclosures W x D mm	Number of pre-wired fans	Possible number of fans	Model No. TE
All dimensions	2	3	**7000.670**

Also required:

Connection cable,
see page 771.

Accessories:

Fan expansion kit,
see page 649.

Door mounted fan

for TS 8 server enclosures,
especially for installing in perforated doors.
The growing packaging density in data communications and network enclosures make active, direct ventilation of the enclosure indispensable. The door mounted fan, which is attached to the rear or front door, supports horizontal air routing for the servers and therefore facilitates faster heat dissipation from active components.

Technical specifications:
- Standard cross member with two fans.
- Air throughput, unimpeded air flow 600 m³/h.
- By adding two fan expansion kits, the air throughput may be increased to 1200 m³/h.
- The direction of air flow is easily reversed by rotating the fan.
- Several units may be positioned in a cascade arrangement.
- Simple mounting on the tubular door frame.

Supply includes:
Wired ready for connection with 2.5 m connection cable, including assembly parts.

Accessories:

Fan expansion kit,
see below.

Note:
Only for mounting on the tubular door frame!

Door configuration for installation in 2 and 4-door ISP racks available on request.

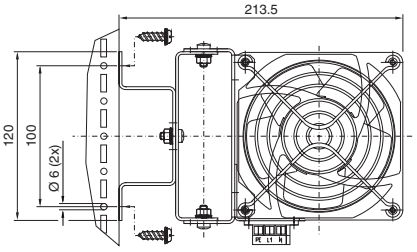
160 m^3/h	3.5	0.15	24 V (DC)	**3108.024**



Features

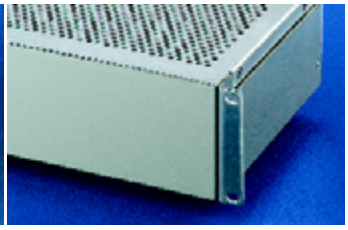
Condensation poses a particular risk for control electronics, especially with outdoor siting, but also indoors. Various different output categories ensure that the correct thermal output is always available. In this way, the total required thermal output can be distributed with complete accuracy within an enclosure.

Simple assembly and perfect control

Fast assembly
This is achieved with a screw or snap fastening on the mounting plate or 35 mm EN 50 022 support rails.

No condensation, and always the right temperature
The heater is controlled as required via a hygrostat or enclosure internal thermostat.

Maximum performance in the outdoor sector



Fully wired unit ready for connection
Compact power with 1000 W thermal output.

19″ rack mount
For seamless integration into the 482.6 mm (19″) structure, with 3 thermal components and 3 fan units. This creates circulation, so that condensation is reliably avoided.

Benefits:

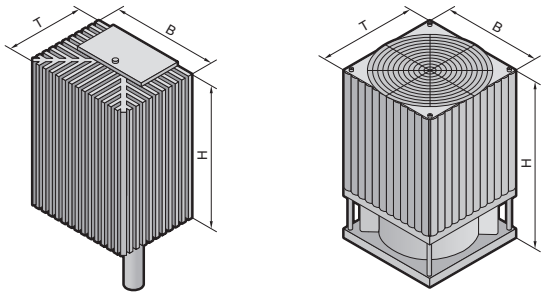
- Continuous thermal output of 10 W to 1000 W
- Self-regulating PTC technology
- Quick-assembly system

Important:

- For the correct temperature and to avoid compensation, use a thermostat or hygrostat, see page 661
- The thermal output is increased with fans
- Heaters should always be installed in an upright position. Leave a distance of 50 mm at the top and bottom to allow convection
- Heat is distributed evenly in large enclosures by using several low-output heaters

General remarks and calculation formulae can be found on our website: www.rittal.com

Continuous thermal output 10 – 300 W



B = Width
T = Depth

Supply includes:
Unit ready to install with permanently attached connection cable (0.3 m). SK 3102.000 with fitted fan including terminal strip.

Note:
- Thermostat SK 3110.000 (see accessories) is recommended for precise temperature control in the enclosure.
- In order to prevent condensation on assemblies, hygrostat SK 3118.000 (see accessories) is recommended to regulate heating.
- In larger enclosures, even heat distribution is best achieved by installing several low-output heaters.
- Installation in the enclosure is generally advisable, even when using heat exchangers and cooling units, in order to prevent condensation.

Approvals,
see page 80.

Detailed drawing,
see page 1183.

Features

Finding the perfect climate control solution is now even easier, with matching system accessories. Perfectly coordinated components adapt the climate control components superbly to your specific requirements. Be it targeted air routing or precise control of the equipment, Rittal has the perfect solution for everything.

Air routing

Air duct system for TopTherm roof-mounted cooling unit and air/water heat exchanger
With the air duct system, cold air may be routed directly to specific areas of the enclosure.

Air diverter
For targeted, downward cold air routing in climate controlled enclosures, climate control doors and TopTherm wall-mounted cooling units.

Adaptor
For unhindered front air infeed when using rack-mounted cooling units in enclosures with front doors.

Controller

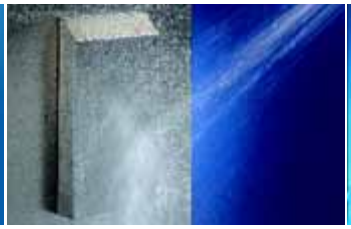
Enclosure internal thermostat and hygrostat
Constant temperature and humidity to protect sensitive electronics.

Speed control
Temperature-dependent speed control to minimise noise and save energy in part-load operation.

SK Bus system
SK bus system with master/slave function to enable several cooling units to communicate with one another.

Installation/maintenance

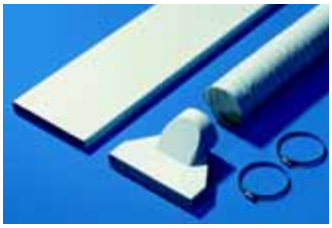
Fast assembly
Easy installation with prepared TS roof plates.



Hose-proof hoods
For protection category IP 55 to EN 60 529/10.91 with fan-and-filter units and outlet filters.

Filter mats
For use in cooling units under exterme conditions.

Air routing



Air duct system

for TopTherm roof-mounted cooling units

The air duct system for Rittal TopTherm roof-mounted cooling units makes it possible to route the cold air directly to specific areas of the enclosure. The risk of “short circuits” in the air circulation due to self-ventilated installed devices is therefore effectively eliminated.
The length of the shallow duct is 1500 mm, and it may be cut to the desired length.

Material:
Flame-resistant plastic to DIN 4102/B1.

Supply includes:
Shallow duct, compensating hose

Accessories:

90° deflector,
see page 658.
Cover bungs,
see page 658.

For cooling unit	Packs of	Model No. Air duct system SK

Cover bungs

for TopTherm roof-mounted cooling units

To cover unneeded cold air outlets in TopTherm roof-mounted cooling units.

Material:
Polyurethane foam

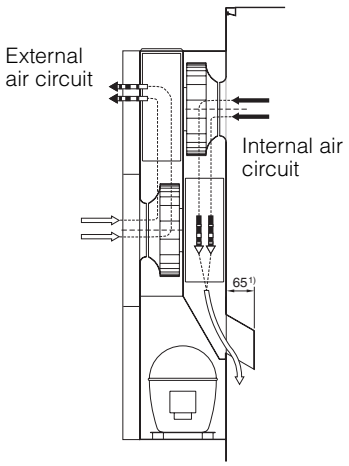
For cooling unit	Packs of	Model No. SK
SK 3382. . . .	2	**3286.780**
SK 3383. . . ./SK 3384. . . ./SK 3385. . . .	2	**3286.880**
SK 3386. . . ./SK 3387. . . .	2	**3286.980**

Air diverter

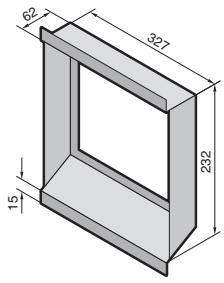
For use in climate controlled enclosures, climate control doors, climate control side panels and TopTherm wall-mounted cooling units.
For targeted air routing of the cold air in a downward direction.
Particularly well-suited for densely-packed electrical components in the lower section of the enclosure.

Material:
Sheet steel

For devices	Model No. SK
SK 8607. . . ./SK 8687. . . . SK 3306. . . ./SK 3331. . . .	**3213.300**
SK 3304. . . ./SK 3305. . . .	**3213.310**
SK 3328. . . ./SK 3329. . . .	**3213.320**
SK 3332. . . .	**3213.330**[1)]



[1)] 115 mm for SK 3213.330



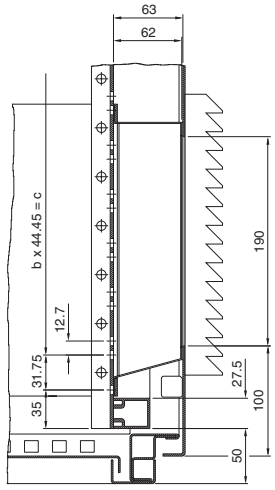
Adaptor

for front air infeed
When using rack-mounted cooling units SK 3278.134/SK 3292.134 in enclosures with front doors (sheet steel or acrylic), this adaptor must be used. It enables ambient air to be extracted unhindered from outside, which is essential for correct functioning of the cooling unit.

Material:
Sheet steel

Supply includes:
Adaptor, sealing gasket, foamed plastic gasket, assembly parts.

Packs of	Model No. SK
1	**3259.000**



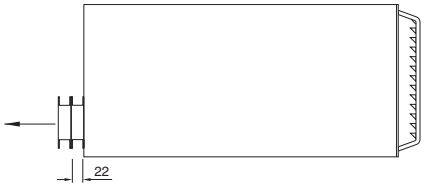
Air duct

for discharge of waste air
For use of rack-mounted cooling units SK 3292.134/SK 3278.134 in enclosures with a depth > 600 mm.
The heated ambient air is blown backwards out of the enclosure through the air duct. The air duct may be extended as required.

Material:
ABS plastic

Supply includes:
Air duct including attachment clamps.

Packs of	Model No. SK
10	**3220.000**



Air duct, may be extended to any length

Regulation/control

Digital enclosure internal temperature display and thermostat

For installing on the enclosure door or wall and in a cooling unit or heat exchanger.

Technical specifications:

- Small dimensions.
- Depth: 100 mm.
- The 3-digit 7-segment display is 13 mm high and clearly legible.
- Can be switched from °C/°F.
- The display can be used in a temperature range from +5°C to +70°C.
- With 1500 mm long NTC sensor.
- Two relay outputs as change-over contact and normally open contact (maximum contact load 230 V, 6 A).
- Freely selectable switching difference.
- The freely adjustable setpoint values can be adjusted via the membrane keyboard at the front.
  Setting range: +5°C to +55°C.
- Display and switching accuracy +/– 2 K.
- Mounting cutout 68 x 33 mm.
- Storage of the minimum and maximum recorded temperature until resetting is next carried out.

Rated operating voltage	Model No. SK
230 V (AC)	**3114.100**
115 V (AC)	**3114.115**[1)]
24 V (DC)	**3114.024**[1)]

[1)] Delivery times available on request.
Special requirements available on request.

Digital enclosure internal temperature display and thermostat

Integrated into a patch panel 1 U.
Including cable attachment for connection cable and label holder.

Rated operating voltage:
230 V (AC)
Special voltages available on request.

Technical specifications:

- Small dimensions.
- Depth: 100 mm.
- The 3-digit 7-segment display is 13 mm high and clearly legible.
- Can be switched from °C/°F.
- The display can be used in a temperature range from +5°C to +70°C.
- With 1500 mm long NTC sensor.
- Two relay outputs as change-over contact and normally open contact (maximum contact load 230 V, 6 A).
- Freely selectable switching difference.
- The freely adjustable setpoint values can be adjusted via the membrane keyboard at the front.
  Setting range: +5°C to +55°C.
- Display and switching accuracy +/– 2 K.
- Mounting cutout 68 x 33 mm.
- Storage of the minimum and maximum recorded temperature until resetting is next carried out.

Supply includes:
Panel, temperature indicator and thermostat, identification strip.

Colour	Model No. DK
RAL 7035	**7109.035**

Enclosure internal thermostat

Especially suitable for controlling fan-and-filter units, heaters and heat exchangers, this thermostat can also be used as a signal generator for monitoring the enclosure internal temperature.

Technical specifications:

- Bi-metal sensor as a temperature-sensitive element with thermal feedback.
- Contact population: Single-pole change-over contact as a quick-break contact.
- Permissible contact load:
  Category 5 – 3 (heating)
  AC 10 (4)[1)] A,
  DC = 30 W
  Category 5 – 4 (cooling)
  AC 5 (4)[1)] A,
  DC = 30 W
  ([1)]) = Inductive load at cos φ = 0.6
- Setting range +5°C to +60°C
- Weight approx. 105 grams
- Dimensions 71 x 71 x 33.5 mm
- Switching difference approx. 1 K ± 0.8 K.

Rated operating voltage	Model No. SK
230/115/60/48/24 V (AC)	3110.000
60/48/24 V (DC)	

- A broad voltage spectrum i.e. just one model covers 24 to 230 V.
- Time-saving connection technique using a terminal strip with a screw connection from the outside.
- Flexible mounting on a vertical or horizontal 35 mm support rail to EN 50 022, and snap fastening in the TS/ES enclosure section using the supplied adaptor.

Hygrostat

The hygrostat switches on the heater and/or fan when a preset relative humidity in the enclosure is exceeded.
In this way, the relative humidity is raised above the dew point, and condensation on assemblies or electronic components is avoided.

Technical specifications:

- Contact population: Single-pole change-over contact as a quick-break contact.
- Permissible contact load:
  AC ~ 5 (0.2)[1)] A
  DC = max. 20 W
  ([1)]) = Inductive load at cos φ = 0.6
- Setting range 50 – 100 % relative humidity
- Weight approx. 100 g
- Dimensions 71 x 71 x 33.5 mm
- Switching difference approx. 4 %

Rated operating voltage	Model No. SK
24 – 230 V (AC/DC)	3118.000

- A broad voltage spectrum i.e. just one model covers 24 to 230 V.
- Time-saving connection technique using a terminal strip with a screw connection from the outside.
- Flexible mounting on a vertical or horizontal 35 mm support rail to EN 50 022, and snap fastening in the TS/ES enclosure section using the supplied adaptor.

Bottom-mounted adaptor

for enclosure internal thermostat SK 3110.000 and hygrostat SK 3118.000

Bottom-mounted adaptor with mounting option for screwed cable glands, for targeted cable infeed from appropriate equipment such as SK fan-and-filter units and enclosure heaters. In conjunction with screwed cable glands, it is also suitable for use as strain relief.

Packs of	Model No. SK
1	3110.200

Regulation/control

Speed control

Temperature-dependent speed control for Rittal fan-and-filter units and air/air heat exchangers with a rated operating voltage of 230 V AC, for noise reduction and to save energy in part-load operation.

Technical specifications:

- For mounting on a 35 mm support rail DIN EN 50 022.
- Dimensions (W x H x D): 94 x 57 x 180 mm
- Rated operating voltage: 230 V (AC)/115 V (AC)
- Setting range: +20°C to +55°C
- Phase cross-over with microcontroller
- Maximum fan output 250 W or 1.2 A at 230 V (AC)
- Maximum fan output 100 W or 1.2 A at 115 V (AC)

Rated operating voltage	Model No. SK
230 V (AC)	**3120.000**
115 V (AC)	**3120.115**[1)]

[1)] Delivery times available on request.

Supply includes:
Speed control, built into a PK enclosure 9512.100, NTC sensor, length 1.80 m.

Mounting adaptor

for speed control

The mounting adaptor enables direct attachment of the speed control SK 3120.000/.115 to the vertical frame sections of network enclosures.

Material:
Sheet steel, zinc-plated, passivated.

Packs of	Model No. DK
1 set	**7526.964**

Supply includes:
Mounting adaptor including assembly parts.

Interface card

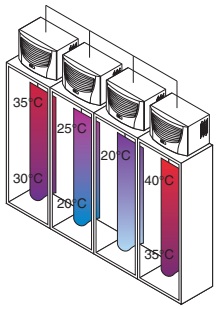
for TopTherm cooling units with Comfort controller

The interface card is an extension for TopTherm cooling units with Comfort controller. In this way it is possible, e.g. to monitor a master/slave combination of up to 10 cooling units. Control is achieved via standardised interfaces: RS232 (DB9) or RS 485, one PLC interface (DB9). RS 422 (RJ45 jack) is the connection to the Rittal CMC-TC. Remote monitoring via TCP-IP, graphical interfaces for operation, evaluation and control, documentation, connection to additional sensors for access control, monitoring is therefore possible. The extension card is built into a 1 U plastic housing. A voltage supply of 24 V DC is needed. This may be supplied from the CMC-TC via a wide-range power pack DK 7320.425 (100 to 240 V AC, 50/60 Hz) or externally via a Kycon connector.

Packs of	Model No. SK
1	**3124.200**

Supply includes:
Interface card integrated into a plastic box W x H x D (mm): 136 x 44 (1 U) x 129.

Serial SUB-D cable, 1.5 m.



SK bus system

The SK bus system facilitates communications between several enclosure cooling units, version Rittal TopTherm .500/.510/.540, production date 05/02 or later, via a master/slave construction such as that required e.g. in complex bayed enclosure systems for optimum operating results.

Technical specifications:
The master/slave construction facilitates common activation and deactivation via door limit switches, parallel activation and deactivation via a temperature setpoint, and common collective fault signals and temperature logging, thereby eliminating the need for intricate wiring.

For	Model No. SK
TopTherm	**3124.100**
Climate controlled enclosures	**3124.000**

Supply includes:
3 m shielded interface cable, including operating manual on programming the cooling units.

Note:
$n_B = n_K - 1$
n_B: Number of order units (SK bus system)
n_K: Number of cooling units to be linked

Property rights:
German patent no. 196 15 469

Cable connection kit

for CS Outdoor cooling units
For simple connection of CS cooling units. All cables preassembled with the corresponding connectors.
Length of cables approx. 2500 mm.

Supply includes:
1 set = 3 cables for AC,
door operated switch and
alarm connection.

Packs of	Model No. CS
1 set	**9765.105**

Cable connection kit

for CS Outdoor heat exchangers
For simple connection of CS heat exchangers. All cables preassembled with the corresponding connectors.
Length of cables approx. 2500 mm.

Option	Model No. CS
3 cables for AC/DC and alarm connection	**9765.110**
2 cables for DC and alarm connection	**9765.115**

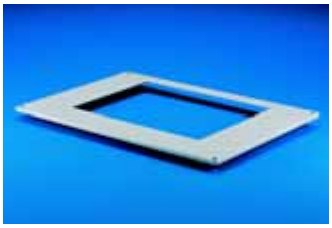
Test adaptor

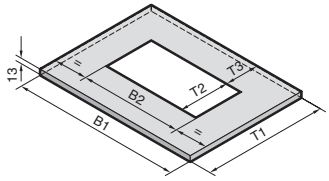
for CS Outdoor climate control equipment
The 9-pole sub-D interface allows testing of all CS climate control equipment. Alternatively supports automatic or manual test procedures.

Supply includes:
1 set = test adaptor
including 2 m connection cable.

Packs of	Model No. CS
1 set	**9765.050**

General





B = Width
T = Depth

Roof plates TS

For mounting on:
- TopTherm roof-mounted cooling units
- TopTherm roof-mounted fan
- Vent attachment TS

The cutouts in the roof plate are arranged in such a way that the TopTherm roof-mounted cooling units are positioned centrally on the enclosure.

Material:
Sheet steel

Supply includes:
Assembly parts.

Colour:
RAL 7035

For enclosures W x D mm	To fit the mounting of TopTherm	Model No. TS

Vent attachment TS

For passive ventilation with labyrinthine air flow routing, to match the roofs for TopTherm roof-mounted cooling units.

Colour:
RAL 7035

Protection category:
IP 43

Supply includes:
Assembly parts.

For roof plates with cutout	Model No. TS
490 x 390 mm	**8801.380**

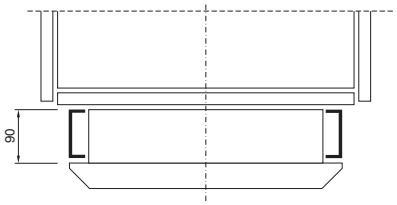
Trim frame

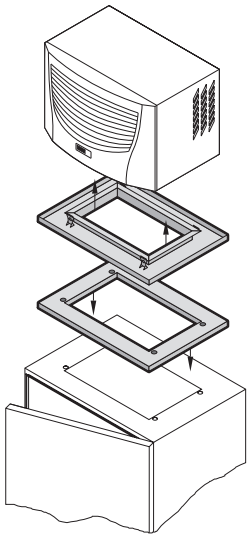
for slimline cooling units
Slimline cooling units can be internally or externally mounted on an enclosure door or wall. The trim frame presents a closed front for the cooling unit.

Material:
Sheet steel

Colour:
RAL 7035

For cooling unit	Model No. SK
SK 3366. . . . SK 3377. . . .	**3377.000**





Quick-change frame

for TopTherm roof-mounted cooling units

The quick-change frame is more than just an alternate frame. Together with the seal, the lower part of the frame is screw-fastened to the enclosure, making it possible to attach or remove the plug-in cooling unit to/from the top part of the quick-change frame previously mounted on the cooling unit using quick-release fasteners. In case of servicing, this means minimal assembly times and hence minimal downtime. What is more, the quick-change frame offers effective protection against the ingress of oil into the enclosure in oily atmospheres, thanks to its integral drainage trough.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Quick-change frame, seal, quick-release fasteners.

For TopTherm cooling unit	Model No. SK
SK 3382. . . .	**3286.700**

Front outlet grille 2 U

for centrifugal fans

This front outlet grille is required if a 482.6 mm (19″) cross-flow blower (SK 3144.000/SK 3145.000) is used in the lower section of the electronic enclosure and the hot air is to be expelled to the outside from the upper section of the enclosure. The design of the grille matches that of the intake grille in the cross-flow blower.
These grilles can also be used as simple inflow and outflow grilles with natural convection.

Packs of	Model No. SK
1	**3176.000**

Accessories:

Filter mat,
see page 668.

Filter holder

for roof ventilation

The use of a filter mat is required in order to increase the protection category of the roof vent (SK 3148.000).
Protection category IP 43 to EN 60 529/10.91 is achieved.

Material:
Sheet steel

Supply includes:
Filter holder including filter mat.

W x H x D mm	Model No. SK
340 x 244 x 15	**3175.000**

Accessories:

Spare filter mat,

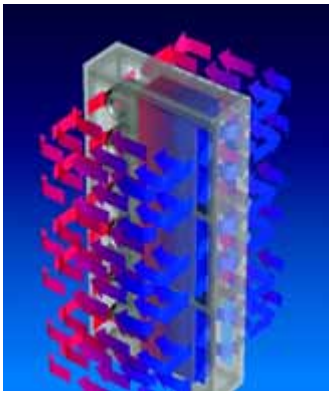
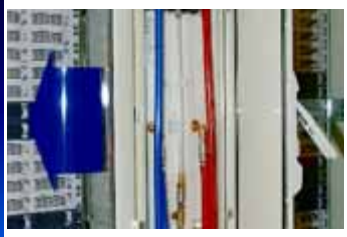
Features

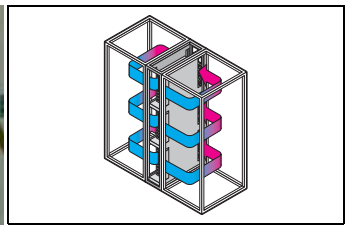
From passive air climate control to active liquid cooling of high-performance CPUs, Rittal provides all the required components and systems. They are designed precisely according to your requirements and application spectrum. Software-assisted planning and calculation of requirements, together with modular, rack-compatible technology, help to minimise investment costs, thereby offering a particularly future-safe solution with a high degree of flexibility.



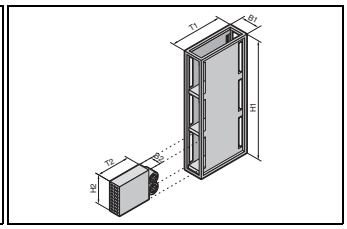
Liquid cooling package



Modular, upgradable and temperature-neutral cooling concept. 12 kW cooling output, with three cooling modules supported per cooling rack.



Optimised air routing
Cold air is blown in at the sides, so that the cold air is evenly distributed in front of the 482.6 mm (19″) level.



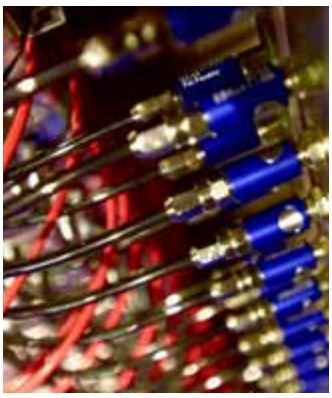
Optionally 1 or 2 server racks may be cooled – both standalone and bayed siting are possible. Bayable to TS and PS server racks, even retrospectively.

Rack-mounted recooling system

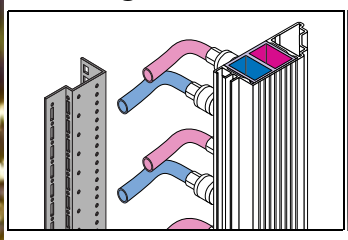
Microcontroller control

Liquid-cooled computers
in a 482.6 mm (19″) server rack are supplied via the shortest route via six cooling circuits, without the need for an additional rising main.

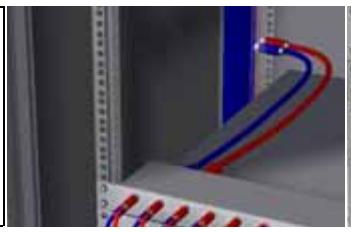
Vibration-free installation



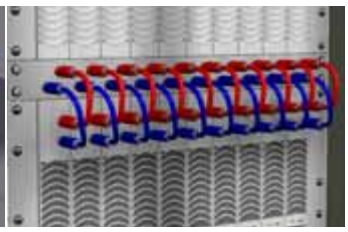
Cooling circuit distributor for processor climate control



The distributor pipes for inlet and return lines for targeted, reliable liquid cooling may be integrated into all standard rack systems.

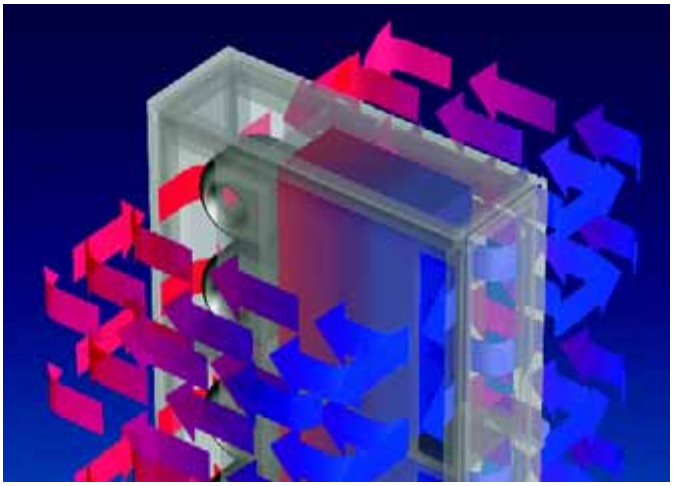


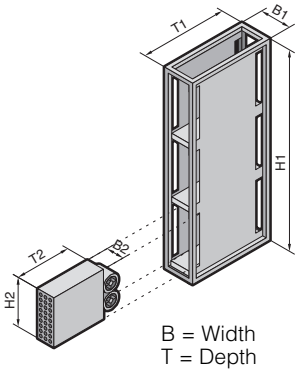
Cooling circuit distributor kit Blade server
The 482.6 mm (19″) distributors are connected to the rising main.



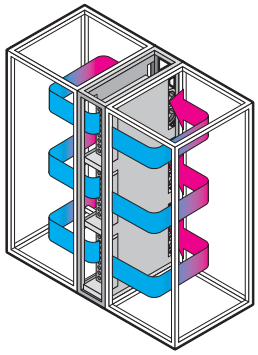
Cooling circuit distributor 482.6 mm (19″)
Connections for 10 servers and a main connection to the vertical rising main.

Rittal liquid cooling package





B = Width
T = Depth



Modular, upgradable and temperature-neutral cooling concept.

- Max. 12 kW cooling output, with three cooling modules possible per cooling rack.
- Approx. 4 kW cooling output per cooling module at 800 m³/h air throughput.
- Optimised air routing: Cold air is blown in at the sides, so that the cold air is evenly distributed in front of the 482.6 mm (19″) level.
- Optionally 1 or 2 server racks may be cooled – stand-alone and bayed siting possible.
- Bayable to TS and PS server racks, even retrospectively.
- Active condensate handling.
- Optional control and monitoring[1] of the cooling rack via Rittal CMC-TC.
- Two-piece modules; for easy installation in narrow passageways.

Technical specifications:

- Mounted as a cooling rack on a server rack based on TS 8, with H = 2000 mm, D = 1000 mm.
- Each cooling rack can accommodate a maximum of three air/water heat exchanger cooling modules.
- Standard supply: Cooling rack equipped with one cooling module.
- Individual modules upgradable to full installation via quick-release couplings.
- Control via a separate module which may be connected to the CMC-TC for incorporation into the network (monitoring).
- Condensation management: The pump in the condensate tray pumps any condensation into the return section of the cooling circuit.

		Enclosure + 3 modules		Individual module for 230 V/115 V
Model No. SK		**3301.230**	**3301.210**	**3301.250**

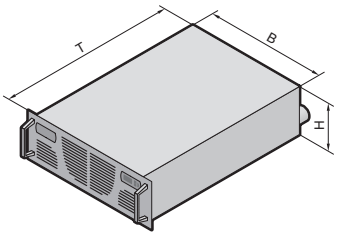
Rack-mounted recooling system



B = Width
T = Depth

Liquid-cooled computers in a 482.6 mm (19″) server rack are supplied via the shortest route via six cooling circuits, without an additional rising main.

- Partial liquid cooling in heterogeneous environments.
- Combination of air and liquid cooling possible.

Technical specifications:

- Installation in the 482.6 mm (19″) level of the enclosure.
- 6 cooling circuit connections for server/CPU cooling on the back of the chiller via drip-free quick-release coupling.
- Vibration-free installation.
- 2 freely programmable alarm outputs.
- Operating pressure display.
- Optional automatic bypass.

Also required:

- Quick-release couplings
- Heat sink, retaining clamps
- Hose,
  see page 675.

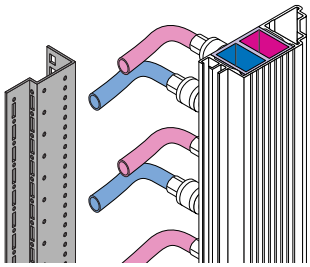
Power Cooling System PCS



Cooling circuit distributor for racks

Water cooling
High performance for CPUs, power packs and disk drives by cooling directly at the area where heat is generated. The distributor pipes for inlet and return lines for targeted, reliable liquid cooling may be integrated into all standard rack systems.
They are linked to an external, central recooling unit which also controls the inlet temperature. The drip-free quick-release coupling ensures an extremely high level of operational reliability. Monitoring of the system functions is performed by the tried-and-trusted Rittal CMC-TC module.
There are 2 complete basic packages available for retro-fitting for different enclosure heights.

Supply includes:

Package 1
Water infeed:
Connection system, non-return valve and 10 m hose, $^1/_2$″, fittings, filter, vent valve.

Water distribution:
Cooling circuit distributor for 20 CPU cooling circuits, vent valve, 40 bulkhead couplings, 50 m distributor hose, 6 mm.

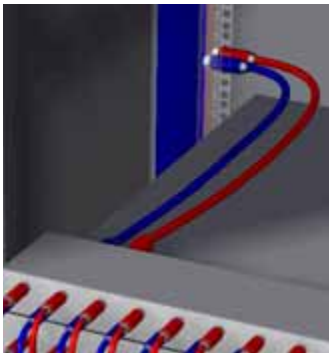
Package 2
Water infeed:
Connection system, non-return valve and 10 m hose, $^1/_2$″, fittings, filter, vent valve.

Water distribution:
Cooling circuit distributor for 40 CPU cooling circuits, vent valve, 80 bulkhead couplings, 100 m distributor hose, 6 mm.

For enclosure height		Model No. SK	
mm	U	Package 1	Package 2
1200	24	**3301.810**	–
2000	42	–	**3301.820**

Also required:
Recooling system,
see page 608 onwards.

Accessories:
Distributor accessories,
see page 675.



Cooling circuit distributor kit

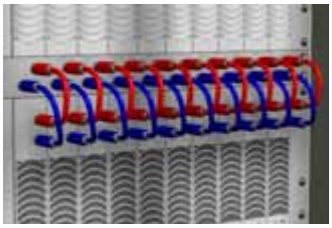
for Blade server
Our liquid cooling for server racks serves as a basis for this solution. The large number of drip-free taps to the individual computers is now replaced by the connection of horizontal liquid sub-distributors, where the drip-free connectors for connection of the Powerblade are found.
5 units are possible with 7 U per server and 1 per 482.6 mm (19″) distributor. The individual 482.6 mm (19″) distributors are connected to the rising main with drip-free connectors, so that the system is modular and scalable.

Supply includes:
1 vertical rising main with 5 taps,
1 482.6 mm (19″) cooling circuit distributor with 10 inlet and return connections,
1 connection hose (inlet and return) from the 482.6 mm (19″) cooling circuit distributor to the vertical rising main,
1 connection hose (inlet and return) from the vertical rising main to the recooler

Packs of	Model No. SK
1	**3301.280**

Also required:
Recooling system,
see page 608 onwards.

Accessories:
482.6 mm (19″) distributor,
distributor accessories,
see page 675.



Cooling circuit distributor 19″

For installation in the 482.6 mm (19″) level with drip-free connections for 10 servers and a main connection to the vertical rising main;
0.5 m hose in each case for the inlet and return.

Packs of	Model No. SK
1	**3301.270**

Permanent availability of your IT systems is undoubtedly crucial. This is your company's heartbeat. For this reason, it is important to ensure stable conditions for your complex server and software system architecture. With this in mind, Rittal combines the five key elementary infrastructure components to create an extremely variable, and above all secure system: **Rack, Power, Cooling, Security, Monitoring & Remote Management.** With Rittal, a high level of IT availability is guaranteed.

RimatriX5

The data centre of the future

New software, rising computer performance, high levels of availability –

these are the new challenges placed on the physical IT infrastructure.

Whether your company is small, medium-sized or large, the requirements on IT performance are growing. Highly complex applications, faster processors, and round-the-clock information and communication – all this demands a physical infrastructure which is more than intact. This leads to a number of elementary questions:

- Will the climate control of individual racks, entire server rooms and data centres withstand the rising heat generated?
- Is the energy supply and back-up designed for a high level of availability?
- How can the existing space be used to optimum effect, even with expansion?
- Are the applications and servers protected from physically-induced failures?
- Can all functions be efficiently managed via a perfect monitoring and remote system?
- Is uninterrupted expansion possible at any time?
- Are the costs under control?

The RimatriX5 concept solves all these tasks. The complete solution from Rittal, for the data centre of the future.

Rittal has the solution: RimatriX5 – the holistic, scalable,

efficient system solution for high levels of IT peformance,

with the added benefits and cost advantages of modularity.

RIMATRIX5
DRIVING IT-PERFORMANCE

With the perfectly coordinated components of rack, power, cooling, security and monitoring/remote management, you get an integral, holistic solution for the IT infrastructure. **Added value is provided by RimatriX5 with its globally available, local service:** Configuration and monitoring support via software, precise risk analysis, application-tailored installation and maintenance service and a rapid escalation service.

With RimatriX5, Rittal offers holistic solutions for a reliable, available and cost-saving IT infrastructure.

Be it server room or data centre, high or exceptional availability – the individual modules of RimatriX5 adapt at any time to suit the individual requirements. What's more, they grow along with requirements:

Monitoring & Remote Management

Thanks to simple operation and administration with the "Monitoring & Remote Management" module of RimatriX5, maintenance and operating costs may be permanently reduced in day-to-day operation, whilst overall availability is enhanced. For example, comprehensive monitoring, measurement and control tasks via the CMC module reduce the risk of failure and facilitate preventive intervention.

Security

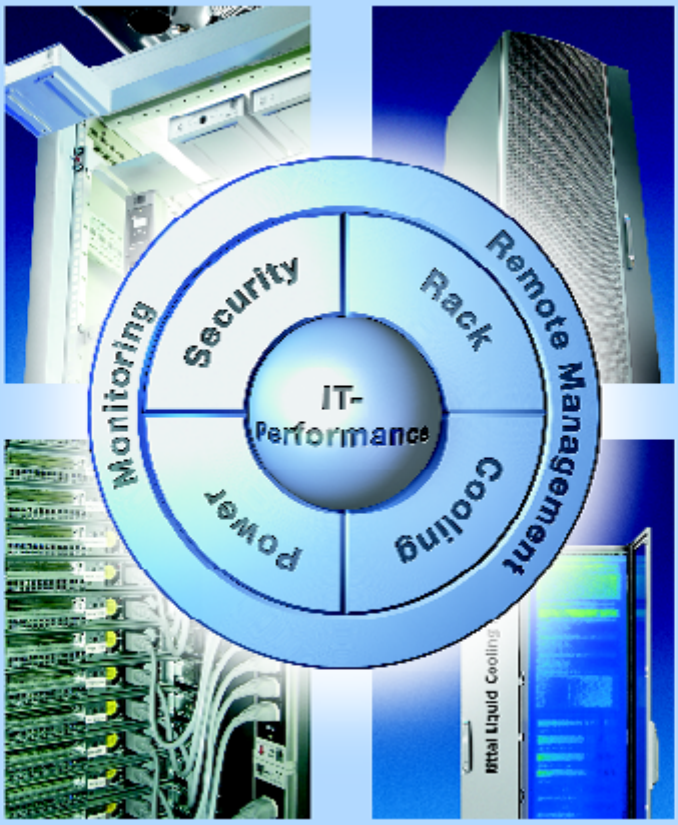
Due to modules for physical rack security and room protection within RimatriX5, a high level of protection of the IT infrastructure is guaranteed. For example, when it comes to physical rack security, temperature, smoke and vibration sensors coupled with modern access control solutions and tested enclosure extinguisher systems provide reliable protection against external influences.

See page 762.

Power

The Power module within the RimatriX5 concept ensures a constant and consistent energy supply.
From plug & play power distribution in the IT rack, to power distribution within the space, to power supply back-up with requirement-based UPS, the Power module of RimatriX5 offers optimum energy performance for a high level of availability.

See page 742.



Rack

As one of the world's leading manufacturers of server and network enclosures, Rittal offers an extensive selection with a unique range of accessories.
In this way, you can create the requirements for high-end individual expansion of your IT infrastructure with greater freedom, more flexibility, and enhanced security.

See page 680.

Cooling

With the climate control concepts of RimatriX5, investment costs are minimised, and investment security is maximised. From fans to active liquid cooling, the climate control solutions may be tailored to actual requirements. This helps to cut investment costs and offers adequate scope for future expansions.

See page 758.

The modular principle for the physical IT infrastructure means system solutions rather than piecework – scalable, flexible, and tailored to your application:

RimatriX5 – Driving IT performance

Features

You define your requirements – Rittal has the solution!

A variety of system platforms will accommodate your differentiated requirements in the networking sector.

You have the performance for new technologies today.

Consequently, your network grows effortlessly in line with new tasks.

The flexbility of its systems allows Rittal to offer this exceptional future-proofing.

Note: The more (symbol) the greater the compatibility.

TE 7000

Two 482.6 mm (19″) mounting levels in the multi-functional section create a solid framework. Load capacity 400 kg!

The benefits of this rack without an enclosure frame: Optimum accessibility, maximum use of the interior space, and superfast assembly.

482.6 mm (19″) distance between levels:
Tailored to Premium accessories in 50 mm increments, or fully depth-variable via the slot attachment.

TS 8

An ingenious symmetrical concept with baying on all sides. With two levels, the frame section affords infinite assembly diversity.

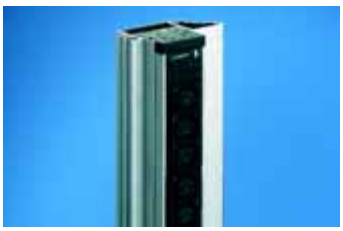
Fully depth-variable interior installation creates flexibility for various installed equipment. Fast assembly by simply locating and securing.

Climate control
For example, a fan unit integrated into the TS 8 twin wall for targeted air routing in the lower part of the enclosure.

Features

flexRack(i)

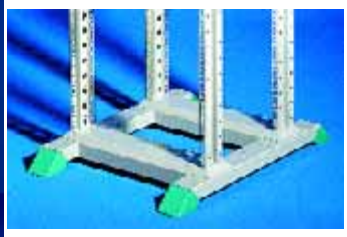
Cable management
Cables may be routed and system accessories integrated within the hollow chamber of the frame section.



Power management integrated directly into the frame section. Three-phase infeed using the plug & play system, with no loss of enclosure volume.

Liquid cooling
The profile of the flexRack(i) allows integration of the inlet and return lines for targeted, safe liquid cooling.

DataRack



A second mounting level for heavy equipment or double panel assembly. Compatible with Rittal system accessories.

RiLab

Supporting column with two vertical tapped strips for flexible mounting on a 32 mm height pitch pattern. The 6-way socket strip with switch may be integrated into the power column.

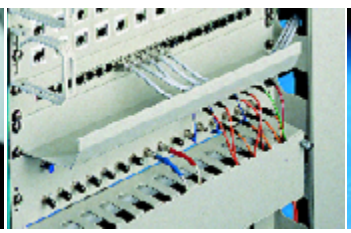
Cable management

Gland plate module with brush strip for cable entry in the base area.

Cable clamp rail, depth-variable
The cable clamp rails may be located directly between two mounting frames.

Cable management 482.6 mm (19″)

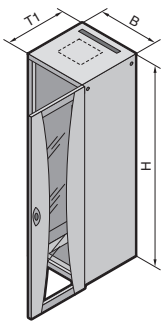
The surplus cable holder may be attached to all support strips or to punched sections and rails with a 25 mm pitch pattern.

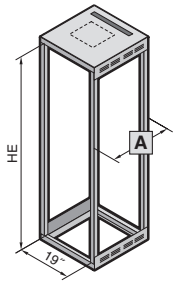


Grooved cable routing panel 482.6 mm (19″)
To hold the patching cables.

Fibre-optic shunting rings
Strain relief and bend radii are guaranteed by the specific design.

Network enclosures, based on Rittal TE 7000, width 600





B = Width
T = Depth
HE = U

A = Defined mounting distance for Premium accessories, see below.

Benefits:
- Coordinated accessories for fast installation in the delivered state
- No frame structure, optimum accessibility
- Load capacity up to 400 kg.

Material:
Sheet steel

Surface finish:
Mounting frame:
Electrophoretic dipcoat-primed
Enclosure panels:
Powder-coated,
RAL 7035/RAL 9005.

Supply includes:
Self-supporting 482.6 mm (19″) frame structure,
glazed door at the front,
two-point locking rod, recessed handle and security lock 3524 E,
sheet steel door at rear, two-point locking rod, recessed handle and security lock 3524 E,
pluggable side panels with security lock 3524 E,
base frame with maximum cutout (for optional population with module plates), roof plate for cable entry with covered cutout for fan, levelling feet, spacers for raising the cover plate.

Detailed drawing,
available on the Internet.

A 495 mm – that is the distance between the two 482.6 mm (19″) levels in the delivered state for all enclosure formats. Corresponds to TS 8 nominal size, depth 400 mm, inner level.

B Pitch spacing 50 mm. The distance between the two 482.6 mm (19″) levels may be varied in 50 mm increments (445 to 695 mm).

C Distance from door:
52.5 mm for depth 600
152.5 mm for depth 800

D The mounting distance in a rear mounting frame, horizontal, corresponds to the frame mounting dimensions of a 600 mm wide TS 8 (outer level, 525 mm).

E = A – 120 mm

The distance between levels is freely selectable via the slot fastening. All key mounting components – punched sections with mounting flanges, divider kits, slide rails, component shelves – are also available in depth-variable format.

■ included with the supply.

[1)] **Model No. TE preconfigured with base/plinth, earthing and accessory kit:**
Height 1200 mm: 7000.840. Height 2000 mm: With side panel 7000.850, without side panel 7000.852.

Accessories Page 832 **Monitoring** Page 762 **Climate control** Page 578

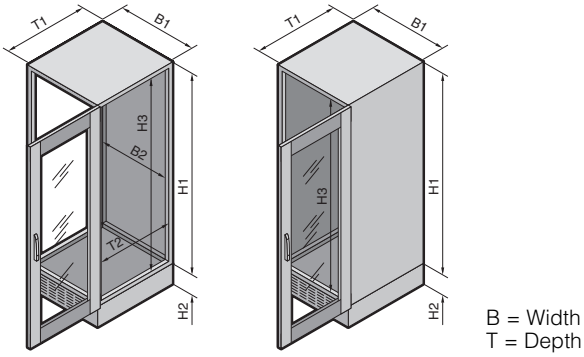
Network enclosures, based on Rittal TS 8, pre-configured



B = Width
T = Depth

Material:
Sheet steel

Surface finish:
Enclosure frame:
Dipcoat-primed
Doors, roof and base/plinth:
Dipcoat-primed,
powder-coated in RAL 7035
Gland plates, punched sections with mounting flanges and mounting angles:
Zinc-plated, passivated

Supply includes:
System frame with doors or rear panel, roof plate, vented base/plinth 100 mm,
earthing of all enclosure panels; supplied loose:
Levelling feet incl. base/plinth adaptor,
4 spacers, for raising the roof,
4 cable clamp rails for the inner frame level,
10 cable shunting rings (105 x 70 mm, plastic),
50 captive nuts, M6, conductive,
50 multi-tooth screws M6.

P 1
Glazed door at the front, 180°, sheet steel door at the rear, 130°. 482.6 mm (19″) mounting angles, front, fitted approx. 150 mm behind the frame front edge, screw-fastened to the TS punched sections with mounting flange as depth stays. Gland plate, one-piece, vented, with cable entry.

P 2
Glazed door at the front, 180°, sheet steel door at the rear, 130°. 482.6 mm (19″) mounting angles at the front and rear, distance between levels 498 mm. Cranked mounting angles screw-fastened to installation brackets approx. 150 mm behind the frame front edge. Gland plate at the front, fitted as an infill panel.

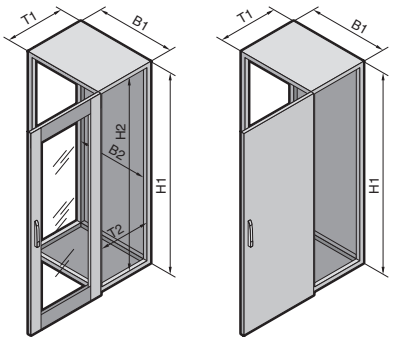
Network enclosures, based on Rittal TS 8, types 1 and 2



B = Width
T = Depth

Type 1
Glazed aluminium door at the front (180°),
with 3 mm single-pane safety glass, comfort handle for semi-cylinder and security lock 3524 E;
sheet steel door at the rear (130°) with handle and security lock 3524 E.

Type 2
Sheet steel door at the front (180°), with comfort handle for semi-cylinder and security lock 3524 E; sheet steel door at the rear (130°) with handle and security lock 3524 E.

Material:
Sheet steel

Surface finish:
Enclosure frame:
Dipcoat-primed
Doors and roof: Dipcoat-primed, powder-coated in RAL 7035
Base plates and punched sections with mounting flanges:
Zinc-plated, passivated

Supply includes:
Enclsoure frame with doors, roof plate, multi-piece gland plate, 2 punched sections with mounting flanges in the enclosure depth.

Approvals,
see page 82.

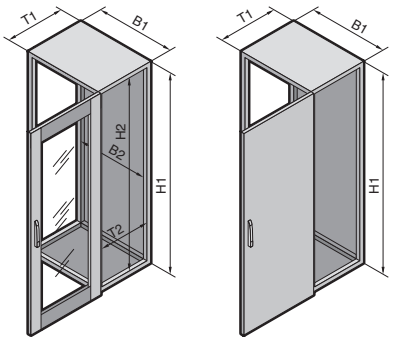
Network enclosures, based on Rittal TS 8, types 1 and 2



B = Width
T = Depth

Type 1
Glazed aluminium door at the front (180°),
with 3 mm single-pane safety glass, comfort handle for semi-cylinder and security lock 3524 E;
sheet steel door at the rear (130°) with handle and security lock 3524 E.

Type 2
Sheet steel door at the front (180°), with comfort handle for semi-cylinder and security lock 3524 E; sheet steel door at the rear (130°) with handle and security lock 3524 E.

Material:
Sheet steel

Surface finish:
Enclosure frame:
Dipcoat-primed
Doors and roof: Dipcoat-primed, powder-coated in RAL 7035
Base plates and punched sections with mounting flanges:
Zinc-plated, passivated

Supply includes:
Enclosure frame with doors, roof plate, multi-piece gland plate, 2 punched sections with mounting flanges in the enclosure depth.

Approvals,
see page 82.

Detailed drawing,
available on the Internet.

Accessories Page 832

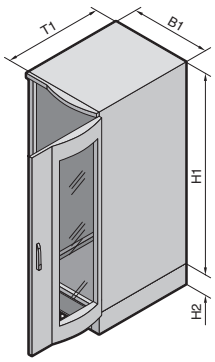
Network enclosures, based on Rittal flexRack(i), pre-configured



B = Width
T = Depth

Material:
Vertical frame sections:
Extruded aluminium section
Base, roof frame, base/plinth, panels: Sheet steel.

Surface finish:
Enclosure panels:
Spray-finished in RAL 7035, frame sections and doors: RAL 9006,
Lock panels: RAL 7035,
Viewing window:
tinted, parsol grey,
Gland plates, 482.6 mm (19″) mounting angles:
Zinc-plated, passivated.

Supply includes:
Multi-platform frame FR(i) with designer glazed door at front (130°), sheet steel door at rear (130°).
Roof plate, side panels, vented base/plinth, gland plate, interior installation depending on design, see table on page 704.
Earthing of all enclosure panels, comfort handles for semi-cylinders with security lock 12321, front and rear.

Property rights:
German patent no. 103 11 376
German Registered Design no. 403 04 312 and 401 03 180
British Registered Design no. 301 54 31 and 210 49 77
US Design Patent no. 479,241

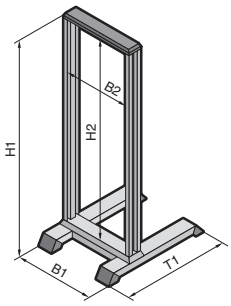
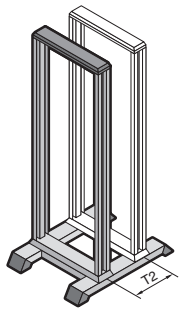
Distributor racks, based on Rittal Data Rack





Supply includes:
1 torsionally stiff section frame welded from 2 mm sheet steel with 482.6 mm(19″) punchings, spray finished in RAL 7035, trim in RAL 5018,
1 stable base/plinth of folded sheet steel and integral die-cast zinc feet (RAL 5018) with the option of floor anchoring, including mounting accessories. Alternatively, levelling feet (DK 7493.000) or castors (DK 7495.000) may be fitted.

Available on request:
- Metric (535 mm) version
- Side rails
- Special versions and special sizes

Load capacity:
max. 150 kg/level

Property rights:
German registered design M 9201859
German patent no. 4207282

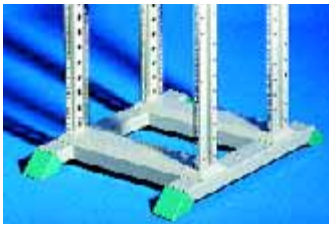
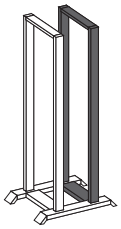
[1] Second mounting level may be positioned on a 50 mm pitch pattern.
[2] A second pair of mounting angles is required for assembly.
[3] Stationary installation or full withdrawal, telescopic slides see page 951.

Accesories Page 832 **Monitoring** Page 762 **19″ installation system** Page 1010 **Patch panels** Page 1021

Acessories for Rittal Data Rack





Second mounting level

In order to accommodate 482.6 mm (19″) network components or for the attachment of component shelves, slide rails and telescopic rails.
The mounting level may be positioned on a 50 mm pitch pattern.
Minimum distance between levels 150 mm, Maximum distance between levels 350 mm.

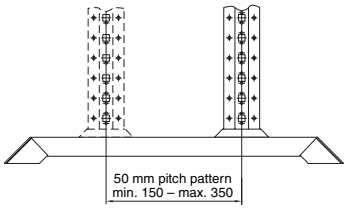
Material:
Sheet steel, 2 mm

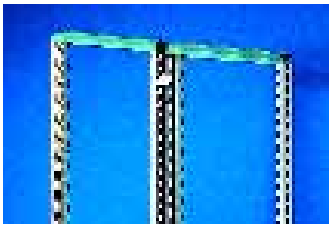
Colour:
RAL 7035

Supply includes:
1 torsionally stiff section frame including assembly parts. 482.6 mm (19″) punched profile at the front, hole centre distance 465 (470 mm at the rear), tailored to the attachment of patch panels and cable routing rails.

U	Model No. DK
31	**7296.000**
36	**7297.000**
40	**7298.000**
45	**7299.000**

Detailed drawing,
can be found on the Internet.





Baying connector

For assembling rows of distributor frames, or for cable routing between data racks.

Technical specifications:
Length: 53 mm

Colour:
RAL 7035

Packs of	Model No. DK
3	**7494.000**

Roof plate for cable routing

For optimised use of the Data Rack as a corridor distributor or cable management rack. By moving the guide plates, the individual cableways can be separately sized, thus enabling structured cable routing in data highways, even in the roof area.
On all Data Racks, the roof plate can be attached with two mounting levels and a distance between the levels of 350 mm.

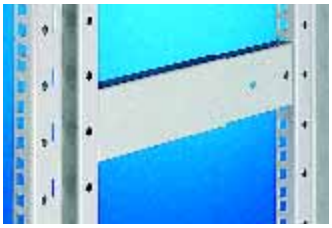
Packs of	Model No. DK
1	**7411.000**

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Supply includes:
Roof plate including assembly parts.

Acessories for Rittal Data Rack



Depth stays

For securing and stabilising two pairs of 482.6 mm (19″) mounting angles in the data rack. The length of the depth stay is adjustable, and can accommodate all spacings of mounting angles.

Colour:
RAL 7035

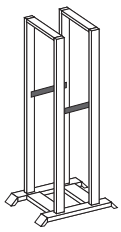
Depth stays	Packs of	Model No. DK
	2	**7401.000**

Continuous slide rail

for two pairs of mounting angles, 482.6 mm (19″)
The continuous slide rail is used to support heavy installed equipment in the Data Rack.
The mounting dimensions of the slide rails were selected to enable them to be combined with 500 mm deep, 482.6 mm (19″) component shelves. The mounting distance of the 482.6 mm (19″) mounting angles is 350 mm.

Requirements:
Second pair of mounting angles

Material:
Sheet steel, zinc-plated, passivated



Packs of	Model No. DK
2	**7402.000**

Accessories:

Component shelf, 500 mm deep, DK 7145.035, see page 944 .

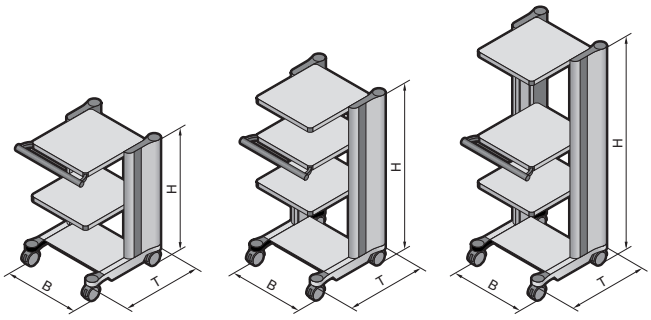
Levelling feet

To compensate for height differences with floor irregularities.
The levelling feet are attached to the die-cast zinc feet of the base/plinth.

Supply includes:
4 levelling feet M12,
levelling range 40 mm.

Packs of	Model No. DK
4	**7493.000**

Mobile workstation, Rittal RiLab



Type 1 Type 2 Type 3

The workstation is ideal for positioning sensitive equipment securely whilst remaining flexible in terms of location. Useful accessories turn the RiLab into a "master of disguise" for the most diverse applications in the networking environment. It can be used as a mobile laboratory or test stand, a flexible measurement station or assembly workstation.

The versatile opportunities are almost unlimited. Particularly designed for the 482.6 mm (19″) systems, the mobile workstation can also be combined with Rittal RiCase enclosures.

Load capacity:
Base frame 225 kg in total, shelves max. 50 kg per shelf.

Material:
Sheet steel, 1.5 mm, spray-finished in RAL 7035, support column of extruded aluminium section, corner pieces and trim panels in ABS, RAL 5018. Special colours available on request.

Supply includes:
Base frame with two integral power columns,
shelf with handle rod,
additional shelf, twin castors,
fully assembled.

Approvals,
see page 83.

Detailed drawing,
available on the Internet.

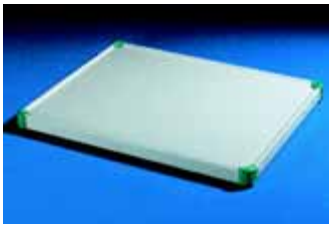
Accessories for Rittal RiLab



RiLab shelf

With all-round raised safety edge. Reduces the risk of assemblies slipping off.

Technical specifications:
Load capacity 50 kg surface load, static

Material:
Sheet steel, 1.5 mm, RAL 7035,
Decorative trims of ABS, RAL 5018.

W x H x D mm	Packs of	Model No. DK
600 x 32 x 490	1	**7600.500**

Supply includes:
1 shelf,
including assembly parts.

Pull-out RiLab shelf

The pull-out shelf is fastened to the supporting pillars via telescopic slides. It guarantees and extension of up to 300 mm. The shelf can be locked in an inserted and extended position via two locating points.

Technical specifications:
Load capacity 20 kg surface load, static

Material:
Sheet steel, 1.5 mm, RAL 7035,
Decorative trims of ABS, RAL 5018.

W x H x D mm	Packs of	Model No. DK
542 x 48 x 490	1	**7600.510**

Supply includes:
1 shelf with telescopic slides,
including assembly parts.

Pull-out RiLab shelf with mouse pad

The pull-out shelf with integral mouse pad offers ideal accommodation for the mouse and key-board. The maximum extension is 295 mm.

Technical specifications:
Load capacity 20 kg surface load, static

Material:
Sheet steel, 1.5 mm, RAL 7035,
Decorative trims of ABS, RAL 5018.

W x H x D mm	Packs of	Model No. DK
542 x 64 x 490	1	**7600.520**

Supply includes:
1 shelf with telescopic slides and integral mouse pad,
including assembly parts.

Rotating, tilting monitor shelf

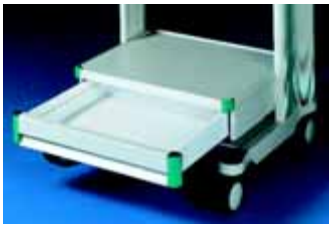
The monitor shelf has got an all-round safety edge. It can be tilted with infinite variation through ±15°. Horizontally, the shelf can be rotated through 70° with infinite variation, and locked.

Technical specifications:
Load capacity 35 kg surface load, static

Material:
Sheet steel, 1.5 mm, RAL 7035,
Decorative trims of ABS, RAL 5018.

W x H x D mm	Packs of	Model No. DK
410 x 32 x 491	1	**7600.530**

Supply includes:
1 monitor shelf with hinge and cable retainer,
including assembly parts.



Drawer

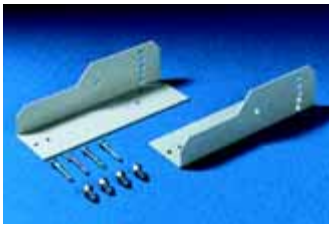
The drawer, which is open at the top, offers a practical solution for storing documents and equipment, and also features a front identification strip. The drawer can be closed at the top via a shelf fitted above it.

Technical specifications:
Load capacity 20 kg static surface load

Material:
1.0 mm sheet steel on the outside, polystyrene on the inside, RAL 7035, trim and corner pieces of ABS, RAL 5018.
Telescopic ball bearings slide.

W x H x D mm	Packs of	Model No. DK
600 x 96 x 490	1	**7600.540**

Supply includes:
1 drawer, including assembly parts.



Adaptor set

for Rittal RiCase enclosures, 600 mm wide
The adaptor set allows RiCase enclosures with a width of 600 mm to be integrated into the base frame. This achieves optimum synergy between the flexibility of the mobile workstation, and the mounting opportunities of the RiCase enclosure. The adaptor set is designed in such a way that the enclosure can be locked in five stages within a tilting range of ±15°.

Technical specifications:
Load capacity max. enclosure weigth 50 kg.

Material:
Sheet steel, 2.0 mm, RAL 7035

Packs of	Model No. DK
1 set	**7600.590**

Supply includes:
1 adaptor set, consisting of two mounting brackets, including mounting accessories.

6-way socket strip with switch

The socket strip has a 3 m long connection cable, and is conveniently housed in the power column of the mobile workstation. This permits direct on-site power supply over short distances without taking up any additional space.

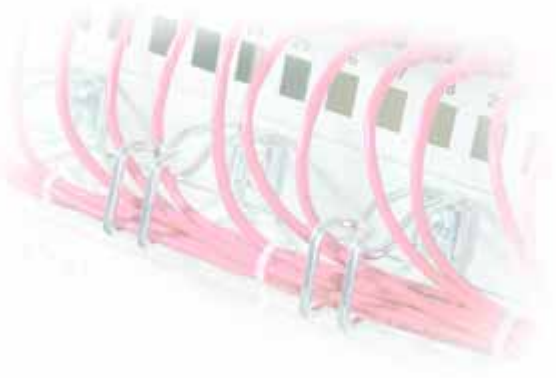
Technical specifications:
Socket strip with switch, 16 A, 250 V,
3 m connection cable, manufactured to
CEI 884-1, tested to VDE.

Material:
Aluminium section with polycarbonate cover, self-extinguishing to UL 94-V0.

Packs of	Model No. DK
1	**7600.600**

Supply includes:
1 socket strip, including assembly parts.

Features



The configuration of decentralised network units is extremely important for small and medium-sized companies.

Rittal creates new solutions to accommodate the growing demands.

RNC enclosure

Prepared for the installation of $^1/_2$ 19″ components. 10″ components may also be installed by using an adaptor. 482.6 mm (19″) variant for vertical population.

Plug & play side panels with integral vent slots.

Wall-mounting with frame.

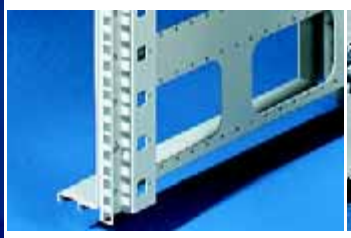
RNC universal enclosure

The universal enclosure, vertical for 482.6 mm (19″) configuration, horizontal for $^1/_2$ 19″ or 10″ configuration.

Bayed for 482.6 mm (19″) configuration, vertical and horizontal.

Passive ventilation
To accommodate a prepared fan, cable entry with brush strip.

Wall-mounted enclosure, based on Rittal QuickBox



Cutouts in the mounting bracket for access to the rear of the patch panels or active components.

Optimum cable clamping on the vertical or horizontal rail using cable ties.

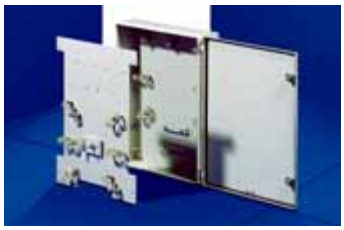
Vent slots for passive ventilation.

Wall-mounted and distribution enclosures

Wall-mounted enclosure based on AE with pull-out frame or depth-adjustable 482.6 mm (19″) level.

Office distributor
Comprehensive cabling for one storey can be achieved with the Office distributor.
The vertical arrangement of the 482.6 mm (19″) level guarantees a very slimline construction.

Small fibre-optic distributors
As a corridor and intermediate distributor of fibre-optic cables.



Small fibre-optic distributor, based on AE
The ideal enclosure for break-out applications.

Fibre-optic marshalling enclosure
Two access areas: Separate doors and security locks:
1. For splicing cassette mounting
2. For the patching chamber.

Small fibre-optic distributors, polycarbonate for extreme conditions: The small plastic enclosure with a high protection category of IP 66 to EN 60 529/ 10.91.

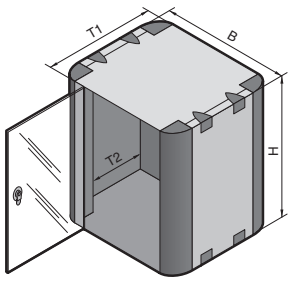
Wall-mounted enclosure, based on Rittal EL, 3-part/2-part

Optimum accessibility, thanks to 3-part or 2-part vertically hinged construction.

Equipped with **Mini comfort handle** (3 – 15 U), **comfort handle** (18 and 21 U) and replaceable **cable gland plates.**

2-part enclosure with swing frame. Facility for installing sub-racks and electronic components.

RNC enclosure



Rittal-Net.com is the passive platform for the fast, future-proof assembly of communications networks in the small office sector.
Three designer enclosures, for population with connection cables, patch cables and distributor panels, are tailored to the specific criteria of the SOHO market. Work groups may be set up quickly and easily.

Material:
1.5 mm sheet steel
Smoked grey acrylic glazing
Corner sections of aluminium
Corner feet made from thermoplastic foam

Colour:
Enclosure panels: RAL 7035
Corner sections: RAL 7030

Further information on the RNC distribution channel may be found at **www.rittal-net.com** (pages in German only)

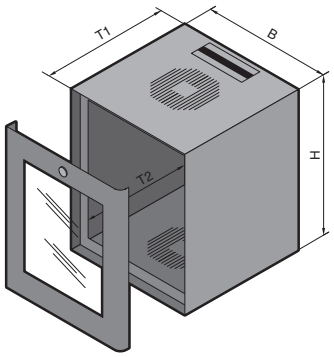
RNC universal enclosure



A contemporary design in black, with compact dimensions and a glazed door with tinted safety glass. Central locking with just one lock, the side panels cannot be removed whilst the front door is latched.

Suitable for use both as a stand-alone model and for wall mounting. The plug-in side panels ensure rapid access and plenty of scope when mounting.
Optional 1/2 19″, 10″ or 19″ components may be installed.

Simple baying is supported, both horizontally and vertically, using the connector kit supplied loose.

Passive ventilation via openings in the rear frame and via perforations in the roof and gland plate, prepared to accommodate a fan expansion kit DK 7980.100.
Cable entry optionally via the rear panel, roof or base.
All frame parts and panels are prepared for earthing.

Material:
Sheet steel, ESG

Colour:
Black, similar to RAL 9011

Supply includes:
Enclosure with glazed door,
Baying kit,
Brush strips for cable entry,
482.6 mm (19″) mounting level at front.

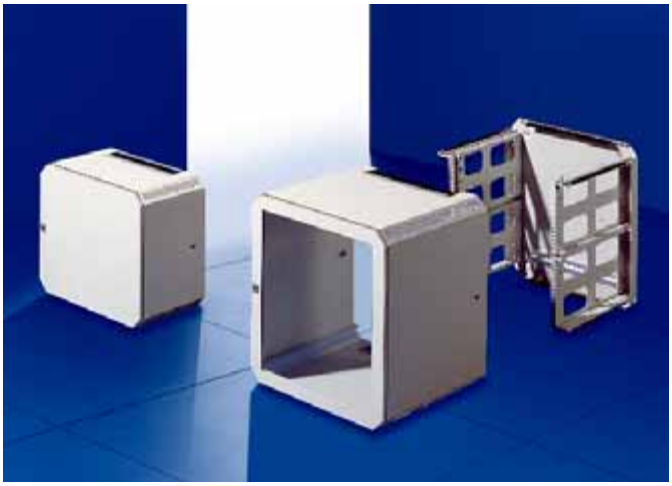
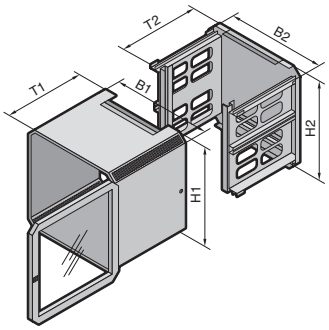
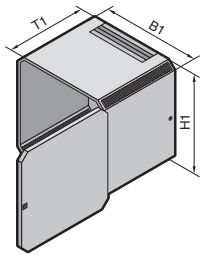
Wall-mounted enclosure, based on Rittal QuickBox, 15 – 21 U







Perfect handling during installation and servicing, thanks to a removable cover.

Material:
Wall mounting plate with mounting brackets:
2.0 mm sheet steel
Enclosure cover:
1.0 mm sheet steel
Door: Sheet steel door or glazed door with sheet steel frame and single-pane safety glass, 3 mm

Surface finish:
Powder-coated
Enclosure: RAL 7035

Supply includes:
Wall section:
Pre-configured mounting bracket,
brush strip for cable entry at the bottom/top,
cable clamp rail

Enclosure cover:
consisting of base and cover tray with vent slots, brush strip for cable entry at the top/bottom, 2 side security locks, sheet steel door/glazed door with security lock, 482.6 mm (19″) mounting angles, infinitely depth-variable.

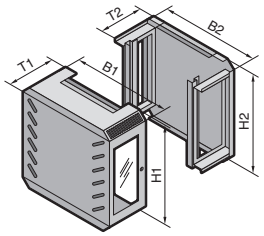
Wall-mounted enclosure, based on Rittal QuickBox with vertical 482.6 mm (19″) level



Optimum use of the interior space via side installation of the 482.6 mm (19″) components. Status monitoring via side viewing window.

Material:
Wall mounting plate with mounting brackets:
2.0 mm sheet steel
Enclosure cover:
1.0 mm sheet steel with side single-pane safety glass, 3 mm

Surface finish:
Spray-finished in RAL 7035

Supply includes:
Wall section:
with pre-configured 482.6 mm (19″) mounting brackets for side accommodation of mounting components and brush strip for cable entry from the bottom and top.

Enclosure cover:
with side vent slots to support passive climate control. The enclosure is secured via two security locks positioned at the sides.

Detailed drawing,
available on the Internet.

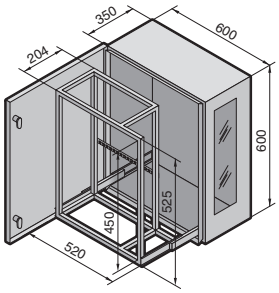
Wall mounted enclosure, based on Rittal AE, with pull-out frame



Wall mounted distributor with 482.6 mm (19″) pull-out frame. Side and front installation with 482.6 mm (19″) components in a vertical mounting position. Horizontal installation also optionally supported at the front. Status monitoring via side viewing window. Pull-out frame may be removed for population via snap fastenings. Passive cooling via pre-configured outlet filter, may be upgraded to active. Optional accommodation facilities for earth rail DK 7113.000 in a vertical position on the pull-out frame.

Material:
Sheet steel

Surface finish:
Enclosure spray-finished, RAL 7035
Pull-out frame zinc-plated, passivated.

Supply includes:
1 wall-mounted distributor enclosure with sheet steel door, cam lock and double-bit insert. Pull-out frame attached to telescopic slides. Outlet filter in enclosure base and on left-hand side. Viewing window on right-hand side. Combination rail for cable clamping behind the cable entry. Additional cable clamp rail for mounting on the pull-out frame.

Protection category:
IP 43 to EN 60 529/10.91

Available on request:
- Fully modified wall-mounted distributors.
- Special designs

Detailed drawing,
available on the Internet.

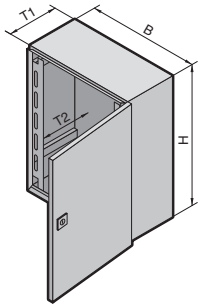
Wall-mounted enclosure, based on Rittal AE



Wall-mounted distributor with infinitely depth-variable 482.6 mm (19″) mounting level at the front. The ideal solution for small networks or corridor distributors.
Max. attainable protection category up to IP 55 (to EN 60 529/10.91) when using the prepunched plastic cable gland plates 2563.000 (optional).

Material:
Sheet steel

Surface finish:
Spray-finished in RAL 7035

Supply includes:
1 wall-mounted distributor enclosure with sheet steel door, cam lock and double-bit insert.
Gland plate with brush strip for cable entry at the bottom,
2 mounting angles, 482.6 mm (19″), depth-adjustable
1 C-rail for cable routing,
1 metal bracket for optional accommodation of an earth rail or 482.6 mm (19″) socket strip.

Available on request:
- Fully modified wall-mounted distributors.
- Special designs

Approvals,
see page 85.

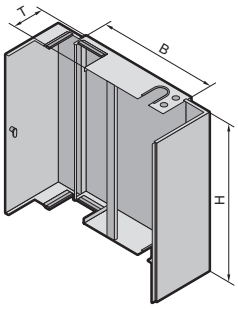
Accessories Page 832

Office distributor, 2 and 4 U, for fibre-optic and copper cables



The super-slimline design of this corridor distributor is achieved thanks to the vertical arrangement of the patch level.
The 2 or 4 U mounting level may be populated with patch panels and/or active components.
Cable entry is in the left-hand enclosure via brush strips. The right-hand part offers a large opening for cable sections and the option of attaching cable glands.

Material:
Sheet steel, 1.5 mm

Colour:
RAL 7035

Supply includes:
Office distributor, fully assembled, with security lock.

Available on request:
- Other variants
- Separate access authorisation available on request.

Detailed drawing,
available on the Internet.

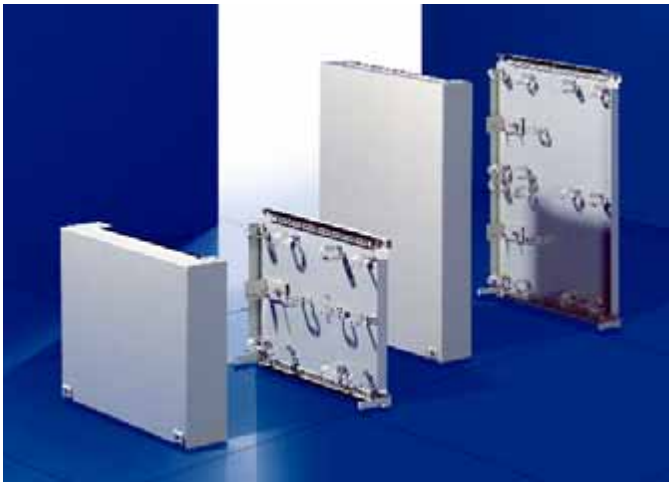
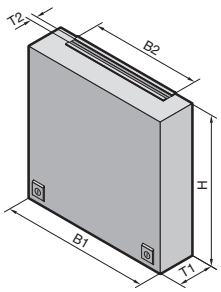
Patch panels for fibre-optic and copper technology see page 1021 to 1025

Small fibre-optic distributor





Material:
Sheet steel, 1.5 mm

Surface finish:
Powder-coated in RAL 7035

Supply includes:
1 enclosure, two-part, in two designs to accommodate a maximum of 48 or 96 optical fibres respectively,
1 wall section:
with mounting holes for wall mounting,
11/16 shunting rings:
for patching cables/fibre stock,
1/2 splicing cassette holders:
To accommodate a maximum of 8 splicing cassettes,
2 comb strips:
for cable clamping, and brush inserts to provide protection against dust,
1 cover:
with suspension device and two cam locks.

Note:
When the small fibre-optic distributor is used without a patch panel, 1/2 splicing cassette holders may be retrofitted (maximum splicing cassette accommodation 16/32).

Available on request:
- Special designs

Property rights:
German patent no. 44 10 795

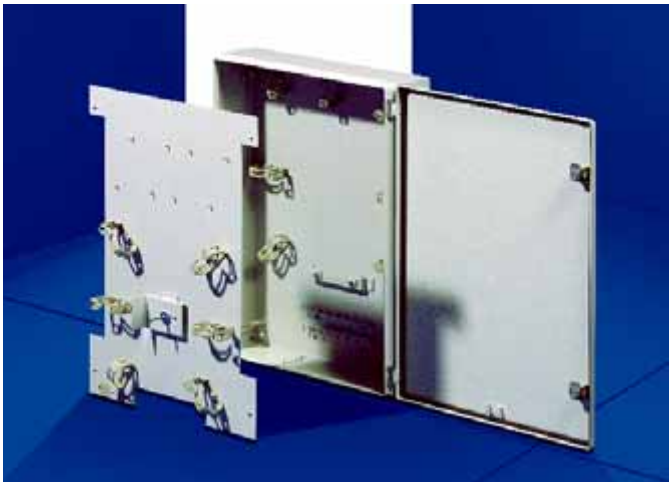
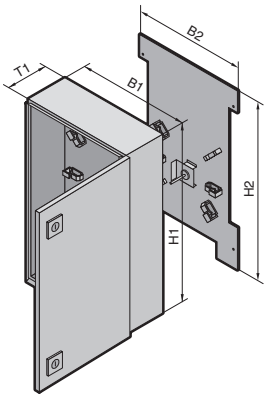
Accessories Page 832

Small fibre-optic distributors, based on Rittal AE





Layout of the small fibre-optic distributor:

Basic enclosure:
With cable shunting rings to accommodate the fibre stock and a strain relief system for incoming and outgoing cables.

Mounting plate:
With accommodation for 4 splicing cassettes and 4 patch panels.

Patch panels:
There are 4 patch panels available with varying cutouts.
Other special variants available on request.

Material:
Sheet steel

Surface finish:
Spray-finished in RAL 7035

Colour:
RAL 7035

Protection category:
IP 55 (to EN 60 529/10.91) when using suitable cable gland plates.

Supply includes:
1 enclosure of sheet steel with
2 gland plates of sheet steel, sides,
1 gland plate, bottom
7 cable shunting rings 70 x 44 mm,
2 strain relief clips,
1 cable clamp rail, double,
1 door of sheet steel, with double-bit locks, with 2 hinges on the right,
1 mounting plate of sheet steel with 6 cable shunting rings 70 x 44 mm,
4 recesses for patch panels,
1 splicing cassette holder.

Detailed drawing,
available on the Internet.

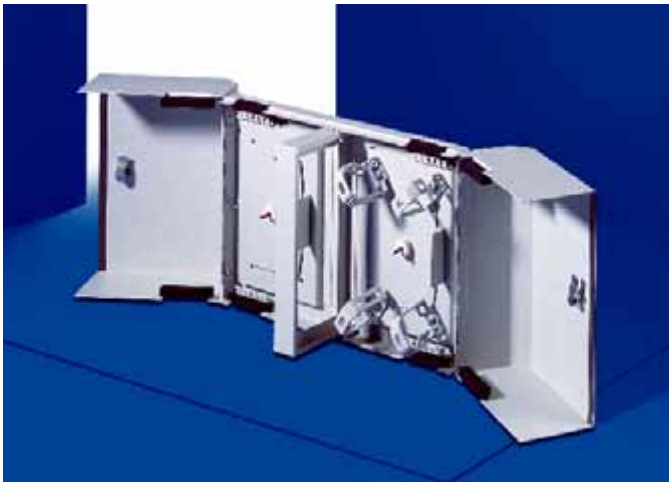
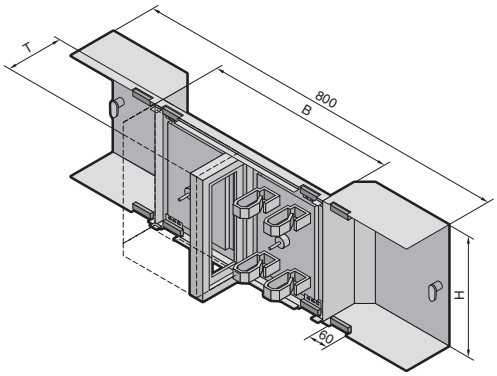
Accessories Page 832

Fibre-optic marshalling enclosure





Patch panels are easily fastened to the gap. A door to cover and lock the splicing cassette accommodation, with separate lock. A second door to cover and lock the chamber/ splicing cassette accommodation, with separate lock.

Material:
Sheet steel, 1.0 mm

Colour:
RAL 7035

Supply includes:
1 enclosure to accommodate a maximum of 24 optical fibres, wall section with mounting holes for wall mounting,
2 doors with different locks, for separate access,
4 shunting rings, 70 x 44 mm,
2 splicing cassette holders each for 2 splicing cassettes,
4 rubber seals for cable entry,
4 comb strips for cable clamping.

Note:
If the marshalling enclosure is used without patch panels, 4 splicing cassettes, 2 per side, may be integrated.

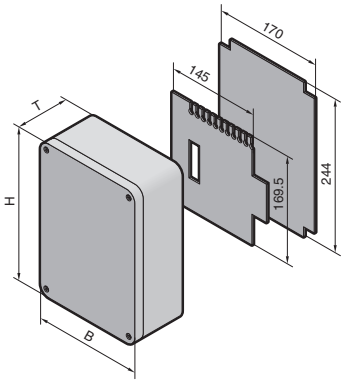
Accessories Page 832

Small fibre-optic distributor, polycarbonate



Configuration
Small fibre-optic distributor:

Mounting plate:
With accommodation for one or two splicing cassettes, whereby the width of the cassettes may vary from 92 to 120 mm.

Dividing plate:
Serves to cover the splicing cassettes and separates them from the patch cables. Accommodation for patch panels and a cable clamp are also integrated.

Patch panels:
Patch panels for
F-SMA, E-2000-ST couplings,
E-2000 duplex and
SC and SC-duplex couplings
are available.
Other special variants available on request.

Cable entry:
For cable entry, there are prepunchings for PG cable glands integrated into the small fibre-optic distributor.
The cable glands (12 x PG 7 and 1 x PG 16) are included with the supply. Pre-assembled connectors will also fit through the knockout apertures (for diameters, see below). The cable may be held in the prepunched knockouts by a 2-piece cable entry or by cable entry grommets, depending on the diameter. The two-part cable entry and the grommets are not included with the supply, due to the different cable diameters.
Diameter of the prepunched knockouts:
12 x 12.5 mm
2 x 22.5 mm

Colour:
RAL 7035

Protection category:
IP 66 to EN 60 529/10.91.

Supply includes:
1 enclosure and lid of fibreglass-reinforced polycarbonate to accommodate splicing cassettes and patch panels,
1 enclosure lid with 2 hinges,
knockouts for PG glands are integrated into the enclosure,
12 x cable glands PG 7,
1 x cable gland PG 16,
1 mounting plate with variable accommodation of 2 splicing cassettes and integral anti-twist guard,
1 dividing plate to cover the splicing cassette, accommodation for 2 patch panels and comb strip for cable clamping,
2 lid screws of polyamide with option of preparing for a lead seal, polyamide insulating bungs for wall mounting screws.
All-round foamed-in PU seal.

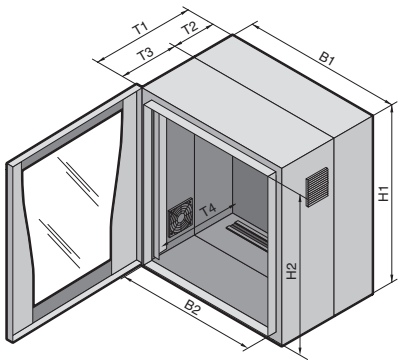
Wall-mounted enclosure, based on Rittal EL, 3-part, pre-configured, depth 573



Material:
Wall and hinged part:
Sheet steel, 1.5 mm
Viewing window:
3 mm safety glass.

Colour:
Wall and hinged part spray-finished in RAL 7035,
Glazed door RAL 7035/7015 (slate grey).

Protection category:
IP 43 to EN 60 529/10.91 for 77XX.735

Supply includes:
Wall section:
with vertical punched rails and C rail mounted horizontally for cable clamping, top cable gland plate solid, bottom cable gland plate with brush strips, earthing rail with star earthing, wall mounting bracket 10 mm.

Hinged part:
with 25 mm pitch pattern of holes in the front and rear frame, Two 482.6 mm (19″) mounting angles mounted on C rails, infinitely depth-variable, one outlet filter each on the left and right side.

Designer glazed door:
With 3 mm safety glass or slotted plate, 9 + 15 U with mini comfort handle for lock inserts, 21 U with comfort handle and 2-point locking, including lock 3524 E.

On request, fitted ex works:
- Fully modified wall-mounted distributors.
- Glazed door with aluminium frame[1)]
- Sheet steel door, solid[1)]

Approvals,
see page 86.

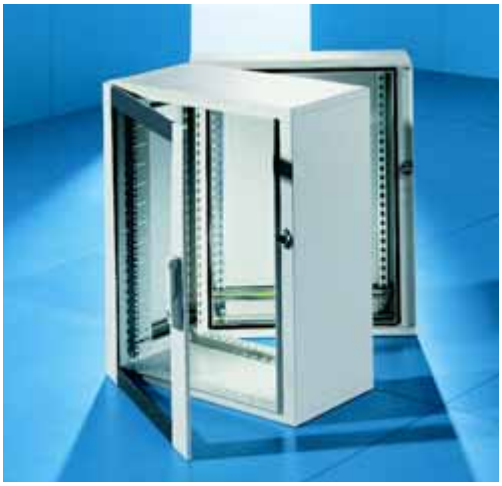
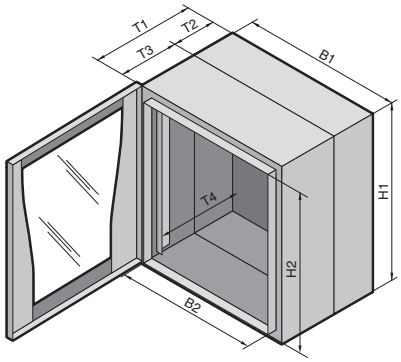
Accessories Page 832

Wall-mounted enclosure, based on Rittal EL, 3-part, with punched rails, depth 473





Material:
Wall and hinged part:
Sheet steel, 1.5 mm
Viewing window:
3 mm safety glass.

Colour:
Wall and hinged part spray-finished in RAL 7035,
Glazed door RAL 7035/7015 (slate grey).

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
Wall section:
With vertical punched rails and C rail mounted horizontally for cable clamping, solid cable gland plate top and bottom, wall mounting bracket 10 mm.

Hinged part:
with 25 mm pitch pattern of holes in the front and rear frame, Two 482.6 mm (19″) mounting angles mounted on C rails, infinitely depth-variable.

Designer glazed door:
6 – 15 U with mini comfort handle for lock inserts,
18 – 21 U with comfort handle and 2-point locking, including lock 3524 E.

On request, fitted ex works:
- Fully modified wall-mounted distributors.
- Special sizes[1)] (T = 373 mm, 573 mm)
- Glazed door with aluminium frame[1)]
- Sheet steel door, solid[1)]

Approvals,
see page 86.

Detailed drawing,
available on the Internet.

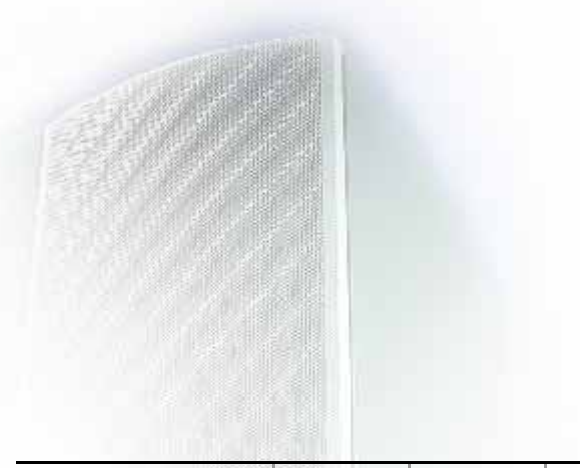
Server racks

Features



Each individual rack makes an important contribution to the physical security of your IT infrastructure. Our comprehensive range of benefits is based on more than 40 years of rack expertise, far-ranging experience in energy management, and the development of pioneering climate concepts. For this reason, Rittal server racks offer the ideal conditions to fuse all the relevant technologies into complete IT infrastructure solutions.

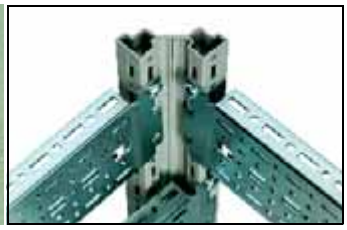
TS 8

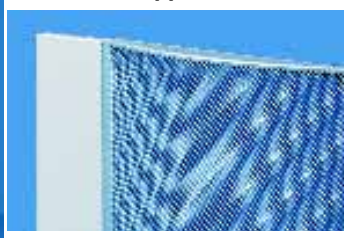
Ventilation
Via perforated front and rear door with free surface area of 78 % in the perforated plate part.

Lock system
with comfort handle and 4-point locking.



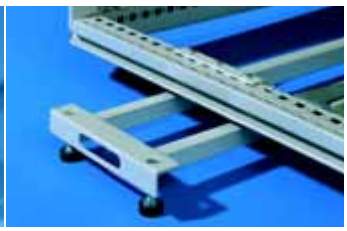
The ingenious symmetrical concept
of the frame offers baying on all sides. With two levels, the frame section affords infinite assembly diversity.

flexRack(i)



The new designer door
unites functionality with aesthetics.

Robust 482.6 mm (19″) mounting frame. Load capacity 1000 kg.



Optimised stability
for optimum operational reliability.

Features

TE 7000

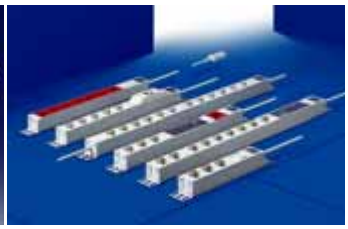
Fully vented front and rear door.

Two-point locking rod, optionally with Ergoform-S handle system.

Power

Power Distribution Module PDR/PDM
Power sub-distribution in 482.6 mm (19″) format. May be retrofitted whilst the system is operational.

Power System Module PSM
Power management up to 96 A or 48 A with redundant circuit. Shock-hazard protected.



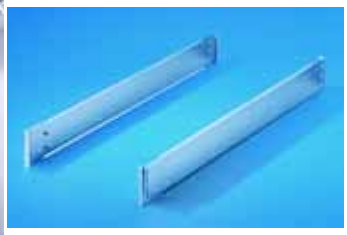
Socket strips
available in various length variants with various functional elements.

Cooling

Processor climate control
Enclosure climate control for heat loss of 13 kW – 22 kW

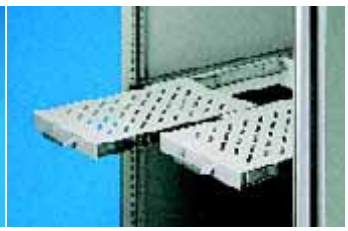
Rack-mounted recooling system
Liquid-cooled computers are supplied via the shortest route via six cooling circuits.

Server integration



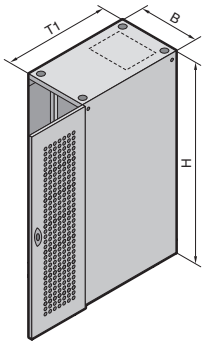
Unversal server installation kit
For integration of the most common server types, using the original installation accessories.

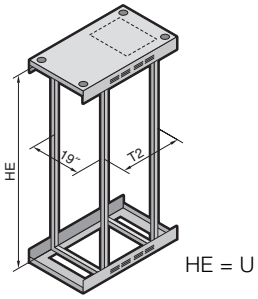
Depth-variable slide rail for flexible adaptation to the existing distance between levels.



Component shelves, two-part
Two tower format servers may be moved independently of one another.

Based on Rittal TE 7000, 1000 mm deep





HE = U

Benefits:
- No frame structure, optimum accessibility

Material:
Sheet steel

Surface finish:
Mounting frame:
Dipcoat-primed
Enclosure panels:
Powder-coated, RAL 7035/9005.

Supply includes:
Self-supporting 482.6 mm (19″) frame structure,
vented sheet steel door front and rear, two-point locking rod, recessed handle (front) and security lock 3524 E, roof plate for cable entry in corners with concealed cut-out for integrating fans, with levelling feet.

Detailed drawing,
available on the Internet.

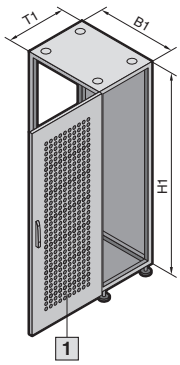
Cable routing Page 964 **Power management** Page 742 **CMC-TC system monitoring** Page 762

Based on Rittal TS 8, pre-configured



Design features
- Firmly linked frame structure
- Front and rear door fully vented; free vented surface area 78 % in the perforated plate part
- 4-point locking, 2-point locking with multiple door versions
- Door hinge may be swapped to opposite side without any machining
- Cable entry via the roof and base/plinth
- Bayable at all levels
- Load capacity up to 1000 kg

Material:
Sheet steel

Surface finish:
Enclosure frame:
Dipcoat-primed
Enclosure panels:
Dipcoat-primed, powder-coated in RAL 7035 or RAL 9005

Mounting angles and punched sections with mounting flanges:
Zinc-plated, passivated

Supply includes:
Enclosure frame TS 8 with sheet steel doors front and rear, vented, with 130° hinges, L-shaped, depth-variable fitted mounting angles and/or 482.6 mm (19″) mounting frame, levelling feet, comfort handle with security lock and 4-point lock.

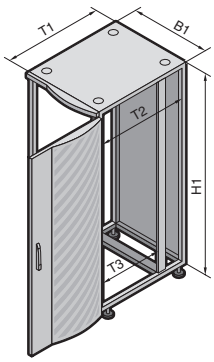
Server racks

Based on Rittal flexRack(i), 1000 and 1200 mm deep, pre-configured



Design features
- Enclosure system may be dismantled because the vertical sections are screw-fastened to the roof and base frame.
- Aluminium vertical section with multi-functional system channel
- Vented front and rear door with free surface area of 64 % in the perforated plate part
- 2-point locking
- Cable entry via the roof and base
- Pull-out stabiliser
- Suitable for baying
- Load capacity up to 1000 kg

Material:
Vertical frame sections:
Extruded aluminium section.
Roof frame, panels: Sheet steel

Surface finish:
Enclosure panels/door trim panel:
Spray-finished in RAL 7035,
Frame sections, perforated plate of door: RAL 9006
482.6 mm (19″) mounting angles: Zinc-plated, passivated

Supply includes:
System frame section FR(i)[1] with designer door, vented, sheet steel door at rear, vented, levelling feet, stabiliser, earthing of all enclosure panels,
comfort handles for semi-cylinders with security lock 12321.

Monitor/keyboard unit, 1 U

with 15″ and 17″ TFT display

This compact 1 U console in a new 2-colour design was developed for secure, space-saving server administration. In order to access other servers, this monitor/keyboard unit is easily combined with the Rittal KVM-Switch SSC view 8 (see page 740). This makes it possible to connect up to 8 servers to one unit in 1 U. The peculiarity of this compact solution is that a 482.6 mm (19″) keyboard including number pad and keypad may be integrated, in spite of its small size. The minimal depth of the unit, at just 490 mm (610 mm with 17″ TFT display, each without SSC extension), makes it suitable for installation in enclosures of depth 700 – 1000 mm. The installation kits supplied allow it to be adapted to an existing difference between levels of 680 – 850 mm for the 482.6 mm (19″) levels.
When closed, the drawer can be locked for protection against unauthorised operation.
In order to prevent heat accummulation when folded, the backlight is deactivated automatically. The illuminated master switch is easily accessbile on the front.

Upon request, it is also possible to integrate a trackball instead of the touchpad and the number pad (international versions). The display may be activated in both analog and digital form via the new standard Digital Visual Interface (DVI), which makes this monitor unit particularly future-proof for forthcoming server generations. The integral active mini-speakers ensure audio feedback in case of error messages or system sounds. The unit has a German keyboard layout. Versions in English and French, as well as country- and customer-specific versions, including USB keyboard connection, available on request.

Supply includes:
Complete monitor/keyboard unit in colour version RAL 7035 (light grey) or RAL 9005 (black) with design components and handle in RAL 9006 (silver) including assembly parts and all the required connection cables (approx. 1.6 m) for:

- Power supply
- VGA (15-pole D-Sub)
- DVI-D
- Audio (2 x jack plugs 3.5 mm, stereo)
- Keyboard connection (PS/2)
- Mouse connection (touchpad or trackball, PS/2).

SSC view 8/SSC view 32 Cat

8 or 32-port KVM switch
for monitor/keyboard unit 9050.XXX

These compact SSC views optionally extend the Rittal monitor/keyboard unit to include the function of an 8- or 32-port KVM switch, without requiring an additional U in the server rack for mounting. The switch may be mounted behind the existing monitor unit, and voltage is supplied via the power pack integrated into the drawer. The SSC has a password-protected OSD menu, but server selection may also be made via hotkeys.

The SSC view 8 may be cascaded with KVM switches from the SSCmulti series if more than the 8 servers are to be administered. In this way, the Rittal SSC switching system is able to grow flexibly in line with requirements. With the SSC view 32 Cat, the computers are connected via CAT cables and SSC converters (PS/2 or USB). In this way, the signals for video, keyboard and mouse are transmitted via a shared cable, considerably reducing the cabling work involved, particularly in fully configured racks. One SSC converter is required for each computer. Processor-controlled keyboard and mouse emulation for each channel ensures fault-free booting and reliable switching between the connected computers.

Rittal SSCmini/SSCmulti

By using the Rittal SSC, the number of keyboards, monitors and mice required is reduced to just one. Computer access becomes easier, more effective and more cost-efficient. As the number of computers increases, the SSC easily grows with it by cascading. The basic variant, the SSCmini, offers 4 channels and an integral hotkey function. The SSCmulti, the multi-talented all-rounder, additionally has 4/8/16 channels, an OSD menu, auto scan, auto skip and multi-platform capabilities. The multi-console feature supports a second Cat 5 console on the SSCmulti. As a hardware changeover switch, the Rittal SSC utilises the keyboard, monitor and mouse interfaces of the computer, irrespective of the software and operating system.

The SSCmulti is ideal for use in a heterogeneous server environment with different platforms such as PS/2 and IBM-compatible, HP 9000, sgi, SUN, RS 6000 and laptops.

Dimensions:
(W x H x D) 482.6 x 44 x 245 mm

Material:
Enclosure: Sheet steel

Surface finish:
Spray finished in RAL 7035

Available on request:
- Converter for Apple Mac and USB interface.
- Distance bridging via fibre-optics.
- Global access for remote server maintenance.

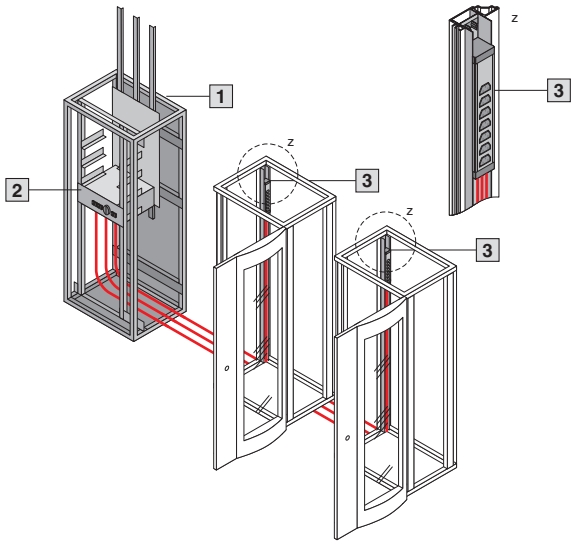
[2] Adaptor for serial mouse and DIN 5 keyboard enclosed (■) in conjunction with a SSCmulti.

Features



The permanent availability of IT is undoubtedly a crucial consideration for you. For this reason, you need to ensure high availability, stable electric power supply to your complex server and software system architecture. Create the framework conditions to ensure that all business processes operate on schedule with exceptionally high-level security parameters for the physical IT infrastructure.

1 Power Distribution Rack, PDR
2 Power Distribution Module, PDM
3 Power System Module, PSM

Power Distribution PDR/PDM

Power Distribution Rack
to accommodate a maximum of 8 PDMs. A maximum of 32 server racks may be connected.

Power Distribution Module PDM 482.6 mm (19″) subrack for power distribution of 40 kW in server and network enclosures.

Power System Module PSM

Busbar
Fully wired, shock-hazard protected, load capacity up to 96 A or 48 A, with redundant circuit.

Plug-in modules
for busbars, various country versions. May be retrofitted whilst the system is operational.

Active Power System Module PSM
Remote administration of the power supply, editing and monitoring of remote limits, SNMP trap message in case of alarm.

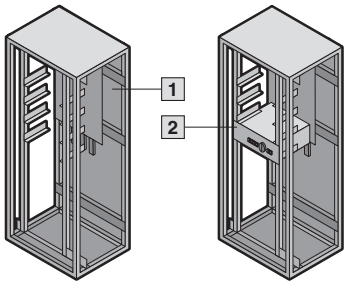
Power Modular Concept PMC – UPS systems

Modularity
High level of flexibility through modular expansion, depending on the UPS capacity requirements.

Redundancy
Multi-server configurations are protected by the redundant Rittal UPS concept.

Scalability
In large output categories, output and autonomy times may be scaled.

Power Distribution Rack PDR



- Power Distribution Rack to accommodate a maximum of 8 PDMs
- Height 1.20 m for 4 PDMs and 2 m height for 8 PDMs
- PDM may be retrofitted whilst operational
- A maximum of 32 racks may be fitted to the sub-distributor
- Fully shock-hazard protected
- Main switch in various options[1]:
  - Isolator switch
  - On-load isolator
  - Power circuit-breakers
  - RC circuit-breaker
- Low-voltage distribution up to 250 A

[1] Depending on the standards of the local power supply company

Note:
Observe the standards of the local power supply companies.

Material:
Sheet steel

Surface finish:
Enclosure frame:
Dipcoat-primed

Doors, roof and base/plinth:
Dipcoat-primed, powder-coated in RAL 7035
Gland plates, punched sections with mounting flanges and mounting angles:
Zinc-plated, passivated

Supply includes:
Enclosure frame with door (without tubular door frame), rear panel, side panels and roof plate, levelling feet including base/plinth adaptor, earthing of all enclosure panels, busbars shock-hazard protected, main switch integrated.

Extended delivery times.

Also required:
Power Distribution Module PDM, see page 743.

assembly

Power System Module PSM

The ever-expanding power requirements of modern IT infrastructures demand refined solutions for power distribution inside the racks. This leads to an associated requirement for additional sockets. The new “intelligent power distribution system” from Rittal significantly reduces cabling and assembly work.

The modular system facilitates basic configuration of the racks, thanks to a vertical support rail with 3-phase infeed. The various insert modules to supply the active components may be snap-fitted into the support rail. This can even be done whilst the system is operational, because the support section is shock-hazard-protected.

The various modules, earthing pins, IEC320 etc. may be inserted into the support rail in any combination. This is easily achieved, even by non-electricians, thanks to the shock-hazard protected plug & play system.

Technical specifications/benefits:

- 3-phase construction with a maximum current of 3 x 16 A
- A redundant three-phase infeed with 3 x 16 A may also be added.
- The redundant circuit is completely separate from the 3 phases of the support rail.
- Each plug-in module picks off a phase on the support rail, either from infeed A or from the redundant infeed B, depending on the direction of connection.
- Modules may be retrofitted whilst the system is operational.
- All plug-in modules are equipped with integral overcurrent protection, so that only the affected module is deactivated in the event of an excessively high current. The other modules remain operational.
- Overvoltage protection may be integrated into the supply line.
- Support rail may be integrated into the vertical frame section of the flexRack(i) without additional equipment.

The vertical support rail allows the slots to be used flexibly across the entire enclosure height, and configured in a redundant manner via separate power infeed to the individual modules.

Supply includes:
Busbar with connection socket and operating instructions. Without cable.

Also required:

Connection cables, assembly kit and plug-in modules,
see page 744, 745.

Possible alternative:

Active Power System Module,
see page 775.

VDE **Reg. no. A592**

Busbar

Direct integration into the flexRack(i)
The busbar is supplied fully wired, without fuse, in two variants (infeed):

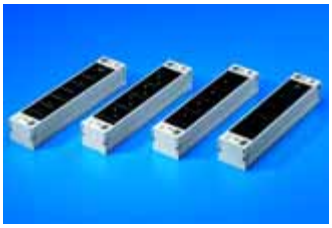
Hinged	**7856.012**



Plug-in modules

for busbar version EU and US. Length 250 mm.

Plug-in module	IEC320	IEC320	D/NL/A	F/B	USA	UK	CH
Number of sockets	6	4	4	4	4	3	4
Without overcurrent protection	**7856.080**	–	**7856.100**	**7856.120**[1)]	**7856.140**[1)]	**7856.160**[1)]	**7856.190**[1)]
With overcurrent protection	**7856.070**	**7856.220**[2)]	**7856.090**	**7856.110**[1)]	**7856.130**	**7856.150**[1)]	**7856.180**[1)]

[1)] Extended delivery times. Other modules available on request. [2)] With individual overcurrent fuse, see page 775.

Overvoltage protection

is connected upstream of the busbar.

Overvoltage protection	Model No. DK
With adaptor connector	**7856.170**

Active Power System Module PSM

Detailled information may be found under “Monitoring”, on page 775.

Connection cable, three-phase

3 m, fully wired ready for connection with adaptor and mains connector in two variants:

- EU: IEC309 connector
- US: L15-30P Nema connector

Connection cable	Model No. DK
EU type	**7856.025**
US type	**7856.055**[1)]

[1)] Delivery times available on request.

Connection cable, single-phase

The PSM system is easily operated as a single-phase system as well:

- CEE connector 230 V, 2P+E 16 A
- Cable length 3 m

Supply includes:
PVC cable, 3-pole
Connection cable, length 3 m
Contact protection CEE22

Packs of	Model No. DK
1	**7856.026**

Connection cable, UPS, single-phase

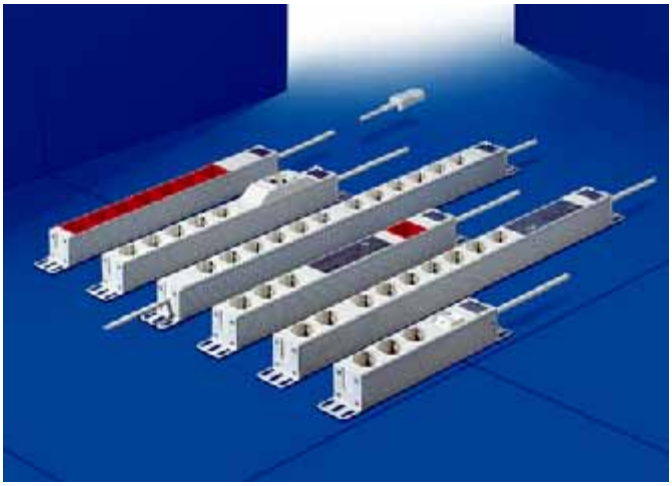
For connecting to an existing UPS:

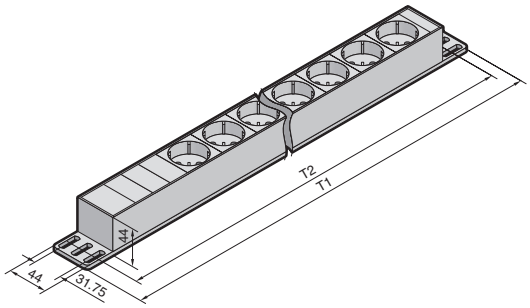
- IEC320 C14 connector (non-heating appliances)
- Cable length 3 m

Supply includes:
PVC cable, 3-pole
Connection cable, length 3 m
IEC cable coupler

Packs of	Model No. DK
1	**7856.027**

Voltage supply





Socket strips

The socket strips in the aluminium channel are available in various lengths with different functional elements. Special attention has been devoted to practical, universal fastening: With a bracket which may be used in four positions, there is a range of attachment options. Hence, for example, the 482 mm long socket strip may optionally be mounted on 482.6 mm (19″) mounting angles, on the enclosure frame, or in the rear section of the wall-mounted distributor. Without additional mounting accessories. The socket strip may be inserted into all sections with a 25 mm pitch pattern. This makes selection much easier, as well as providing additional flexibility and saving on warehousing.
Provision has also been made for the cable routing of the infeed, and when mounting in the 482.6 mm (19″) section there is adequate space to route the infeed between the socket strip and the mounting angle without kinks.
The arrangement of the sockets at a 45° angle allows unrestricted use of angular connectors.

Technical specifications:
Rated voltage: 250 V
Rated current: 10/16 A
Connection cable: 2 m long
H05VV-F3G1.5

Material:
Aluminium section natural anodised,
socket inserts polycarbonate.

Supply includes:
Socket strip,
two mounting brackets,
including assembly parts.

Standards:
Sockets:
E DIN VDE 0620-1/A1
(VDE 0620 part 1/A1): 2003-

[1] Variable attachment distance within a range of 5 mm, the distance given is hole centre – hole centre of mounting bracket.

Variants:

Rocker switch
Illuminated, 2-pole switch. The safety bars prevent accidental contact.

Master/slave
2-pole electronic automatic switching unit. The operating point may be set from 9 W to 35 W. Equipment which switches to energy-saving or stand-by mode when switched on cannot be used as the master device. In the ON state, the master device must draw 9 W, and must not draw more than 35 W in the OFF state.

Overvoltage protection and interference suppression filter
The connected equipment is protected from voltage peaks in the mains and switching operations by the power suppliers. The EMC interference suppression filter provides protection from high-frequency interference voltage from both directions – the mains and the connected equipment.
The green ready light is extinguished in the event of disconnection or malfunctions. Connected equipment remains disconnected.

Overvoltage protection device (SPD), type 3
Maximum continuous voltage Uc: 280 V AC
Rated load current IL: 16 A
Maximum overvoltage protection at the mains end:
LS:B16A or 16AgL/gG
Protection level Up: 1.5 kV
Combined surge Uco (L-N): 5 kV
Combined surge Uco (L/N-PE): 6 kV
Rated discharge current In (L-N): 3.0 kA
Rated discharge current In (L/N-PE): 6.5 kA
Arrester disconnector: Permanently disconnects SPD and equipment from the mains
Status display: Green ready light is extinguished upon disconnection.

Overvoltage protection and interference suppression filter, with RJ 11 connector for connection to the CMC.
With the relay message contact, undervoltage and any failures caused by overvoltage can be reported via the CMC in the network using an SNMP trap.
Relay alarm output: RJ 11 jack
Load capacity of relay: 50 V DC, 100 mA

Miniature circuit-breaker
Protects cables from short-circuit and overload. 2-pole switching (thermal/magnetic). Tripping characteristic B.

UPS strip
With red socket inserts. These indicate the items of equipment protected by a UPS.
Connection cable with IEC 320 connector.
Cable: H05VV-F3G1.0/rated current: 10 A

2 circuits
Two circuits with two separate connection cables, 2.5 m.

RCCB
For personal protection. With residual-current circuit-breaker IΔn 30 mA to DIN VDE 0664 part 1/85.

RCCB and line protection
A combination of personal, overload and short-circuit protection. With residual-current circuit-breaker IΔn 30 mA to DIN VDE 0664 part 1/85 and residual-current circuit-breaker to DIN VDE 0641/A 4/11.88 16 A/250 V~.

Version B/F (Belgium/France)
With 7 or 12 sockets to CEE 7-V UTE, with child-proof system.

IEC connector
With connection sockets to IEC 320, connection cable, 2 metres or IEC 320 input in the connector panel.
Cable: H05VV-F3G1.0/rated current: 10 A

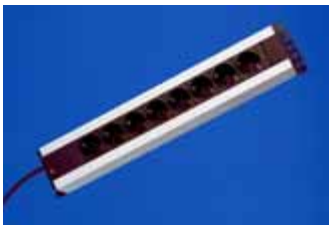
see page 746.



TE socket strip

8-way socket strip for earthing-pin plug/version D. The strip is made of plastic and may be mounted vertically on the TE frame or in the rear 482.6 mm (19″) section. In the 482.6 mm (19″) section, more than 2 U of space is required. The sockets are arranged at an angle of 45° so that angular connectors are also easily used. The socket strip is supplied with a 2 m connection cable. The connection cable is contacted in a terminal slot in the strip. The terminal slot is equipped with a separate cover, so that this connection point can always be quickly and easily accessed. Replacement of the connection cable is likewise simple. Furthermore, the socket strip has external terminals for separate earthing.

Technical specifications:
Rated voltage: 230 Volt AC
Rated current: max. 16 A
Connection cable: Length 2 m, H05VV-F3G 1.5 mm^2, without connectors with wire end ferrules

TE socket strip	Model No. DK
8-way, earthing-pin	**7000.630**

Junction box with multi-functional bracket

The angle bracket can be installed in all network enclosures in a system-compatible design. The junction box serves as a transfer point for the power supply to all equipment (fans, lamps and socket strips). As well as being used as a junction box or interchange point, the bracket may also accommodate the thermostat (SK 3110.000) or the hygrostat (SK 3118.000) thanks to its integral holes.

Packs of	Model No. DK
1 set	**7280.035**

Material of bracket:
Sheet steel

Colour of bracket:
RAL 7035

Supply includes:
1 bracket, 1 junction box,
6 m connection cable 3 x 1.5 mm^2 (flexible).

Energy-Box, 482.6 mm (19″)

Technical specifications:
A depth-variable top hat rail for installed equipment to DIN 43 880, sizes 1 – 3 (e.g. to accommodate built-in sockets, miniature circuit-breakers etc.). Cable clamping at the rear, one N and one PE rail on an insulated plinth. Plastic cover including extension cover (UL 94-V0), maximum accommodation of 22 installed devices (width 18 mm). Maximum accommodation capacity = 22 HP (22 x 18 mm = 396 mm).

Packs of	U	Model No. DK
1	3	**7480.035[1)]**

[1)] To order versions in RAL 7032, please add extension .000 to the Model No.

Colour:
RAL 7035/RAL 7032[1)]

Supply includes:
Energy-Box with blanking covers

Note:
Individual population with circuit-breakers at the factory available on request.

German patent no. 42 00 836

Energy-Box, 482.6 mm (19″), pull-out

This Energy-Box is designed to accommodate both DC and AC components. The pull-out component front affords optimum accesss to the wiring space from above and below.

Connection clamps
for DC current:
2 clamps 35 mm^2,
9 clamps 16 mm^2 (per rail)

for AC current:
1 clamp 16 mm^2 (PE or N),
20 clamps 4 mm^2 (per rail)

Technical specifications:
Depth-adjustable top hat rail for snap-in attachment of installed equipment to DIN 43 880 in sizes 1 – 3 (e.g. to accommodate built-in sockets, miniature circuit-breakers etc. or entire installation assemblies such as the ABB “smissline” system). Cable clamping at the rear, two power distribution rails with connection clamps on isolated base/plinth. Plastic cover including extension cover, maximum accommodation of 22 installed devices (width 18 mm).
Maximum accommodation capacity = 22 HP (22 x 18 mm = 396 mm).
Depth: 220 mm.

U	Model No. DK
3	**7480.300**

Extended delivery times.

Colour:
RAL 7035

Supply includes:
Energy-Box with plastic blanking covers.

Available on request:
Distribution box for DC distribution in the outdoor enclosure.

Features

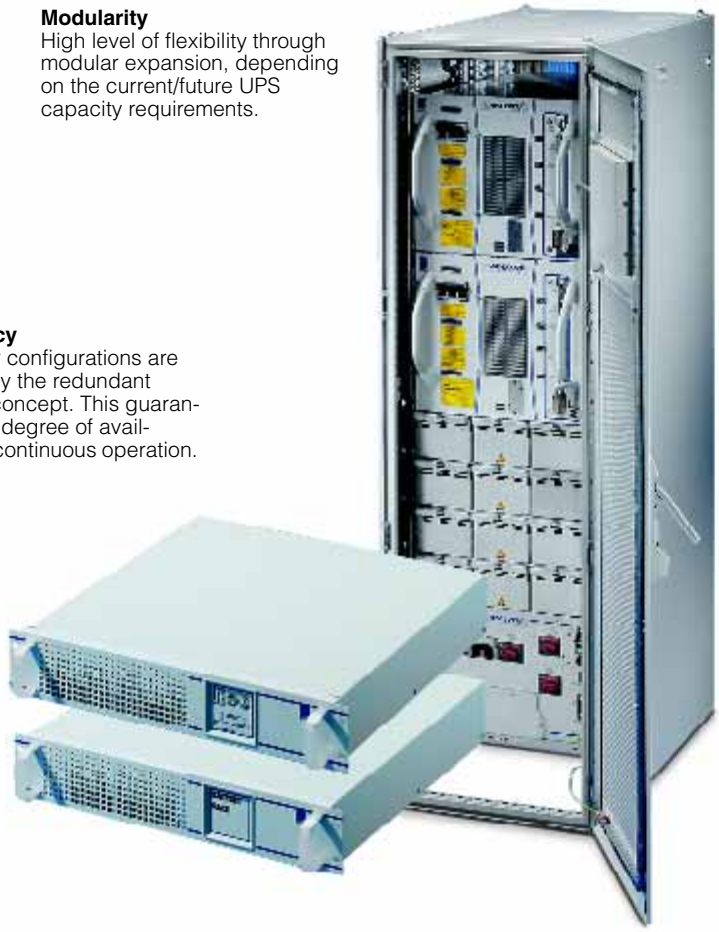
Rittal Modular Power Concept PMC – Applications

The modular Rittal UPS concept meets the versatile data center requirements and is easily expanded with additional UPS modules. High initial investments for the first-time installation are avoided thanks to the modular design concept, since UPS capacities may be upgraded at any time as and when required. The modular concept allows customers to invest as their business expands, and avoids unnecessary electrical installation.

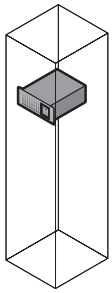
Modularity
High level of flexibility through modular expansion, depending on the current/future UPS capacity requirements.

Scalability
In large output categories, output and autonomy times may be scaled, while in small output categories autonomy times may be scaled.

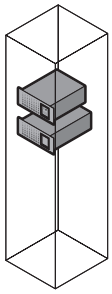
Redundancy
Multi-server configurations are protected by the redundant Rittal UPS concept. This guarantees a high degree of availability and continuous operation.



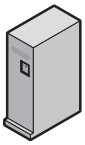
Output range 1 – 6 kVA



2 U UPS with integral battery pack (1/1.5 kVA).

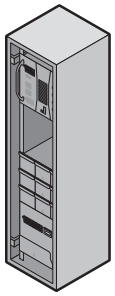


2 U UPS with 2 U battery pack (2/3 kVA).

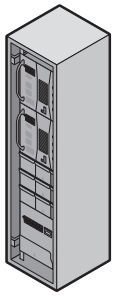


UPS floor standing enclosure with integral battery pack (6/1.5 kVA).

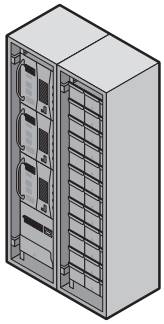
Output range 10 – 120 kVA



One PMC module 10 – 40 kVA with batteries in a TS 8 enclosure.



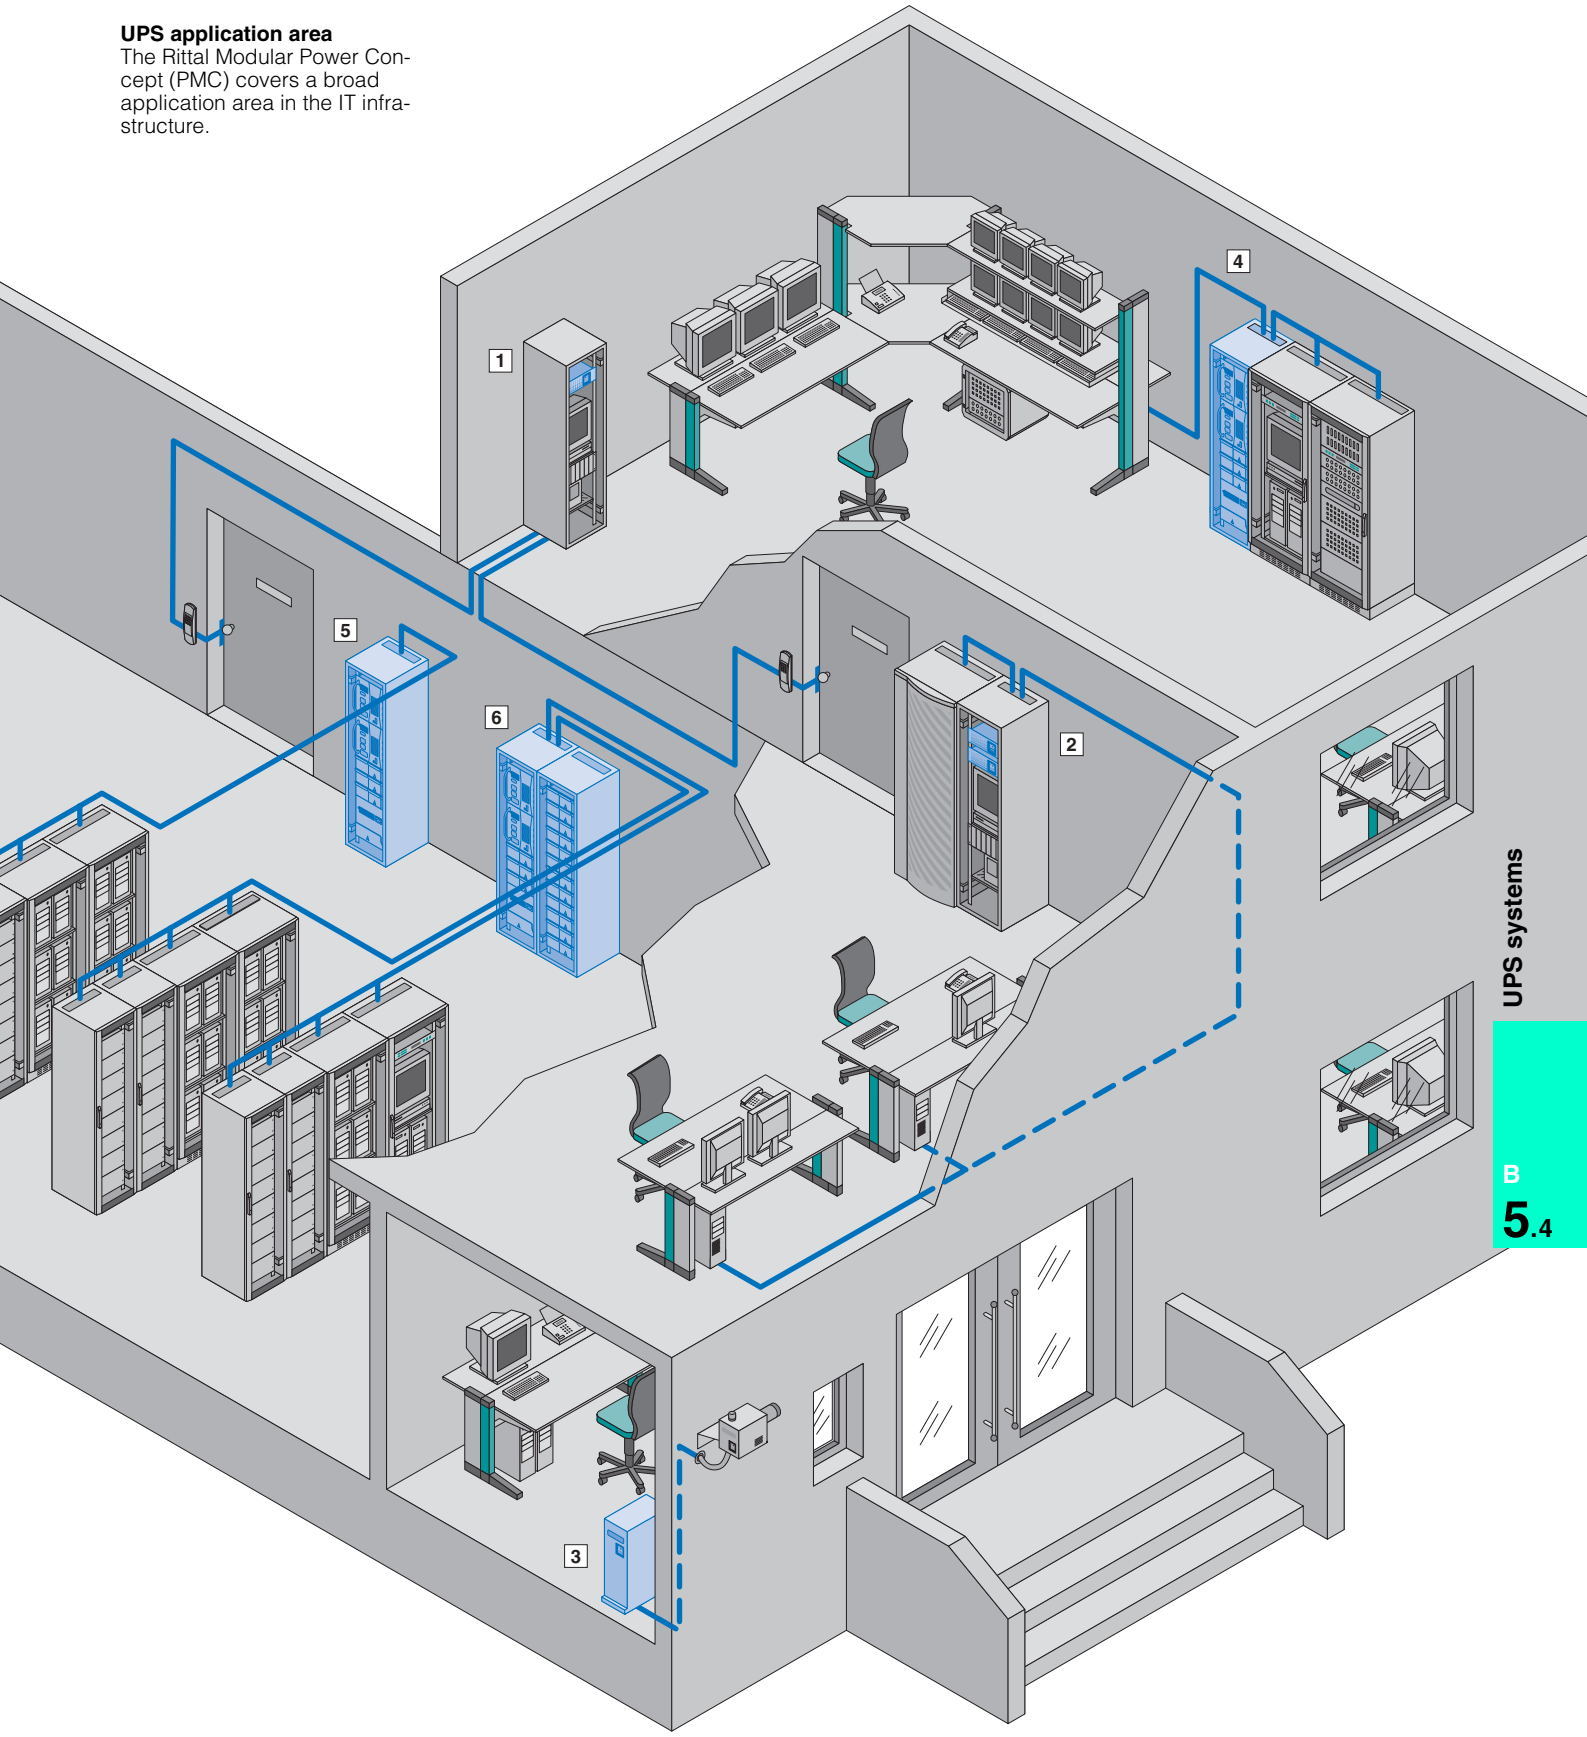
Two PMC modules 10 – 40 kVA each with batteries in a TS 8 enclosure.



Three PMC modules 10 – 40 kVA each with separate battery enclosure.

Features

UPS application area
The Rittal Modular Power Concept (PMC) covers a broad application area in the IT infrastructure.



1 UPS safeguards the access system to the building.

2 UPS safeguards the company's CAD system.

3 UPS for stand-alone applications.

4 Automatic system shutdown with administration option.

5 Central back-up of computer centres with redundant UPS functions.

6 Scalable UPS system for output and autonomy times.

UPS, single-phase, output range 1 – 6 kVA

The Rittal UPS with double conversion technology protects the IT infrastructure from hardware damage, data loss and operational standstill, triggered by power failures, voltage peaks or similar disruptions. Thanks to the active-power factor generated by the batteries/transformers, terminals are supplied with a constant energy quality. The system conforms to the UPS classification based on operating response in accordance with standard IEC 62 040-3 and VDE 0558 part 530. The Rittal UPS carries the classification code VFI-SS-111. The UPS software included as standard with the supply also facilitates the fully automated shutdown of systems and servers, as well as visualisation of the operating status.

Benefits of the Rittal Modular Power Concept (PMC)

- High-quality double transformer technology with perfect sinusoidal output voltage
- Electronic bypass
- Autonomy time may be extended with battery expansion
- Integral battery management, self-test and fast-charge system
- Sealed, maintenance-free lead gel battery, 5 year service life under Eurobat
- Clear LED display
- Alarm function
- Serial interface (RS-232)
- Optional relay, SNMP or AS 400 slide-in board
- Compatible with the Rittal CMC-TC monitoring system

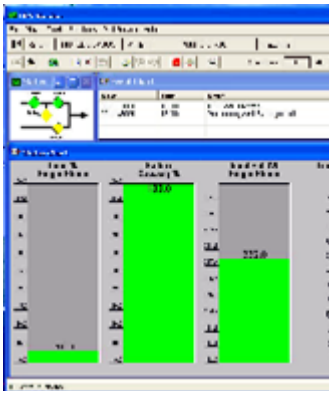
Technical features

Double-conversion technology
This technology is also known as online technology. The electrics with isolating transformer supplies connected equipment with a perfect sinusoidal output voltage.

Bypass function
The Rittal UPS system is equipped with an internal electronic bypass. This protects the UPS system from damage resulting from overload.

Intelligent battery management
The integral charging control checks the readiness of the battery units and ensures constant system availability. The battery remains protected from overcharging or exhaustive discharge.

Battery pack
All Rittal UPS systems may be equipped with additional battery packs. The battery packs serve to extend the autonomy time.
For UPS output categories 2 kVA and 3 kVA at least one battery pack is needed, since the control unit and battery are divided into separate enclosures here.

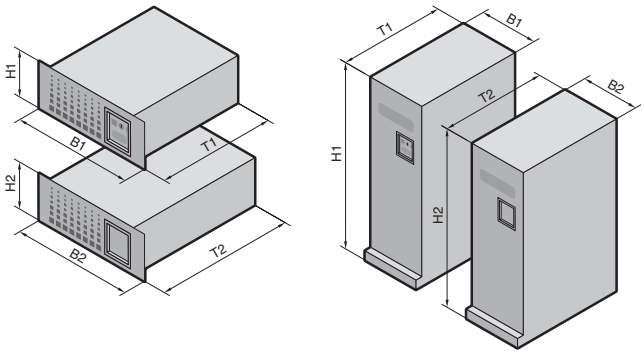


Software

The Rittal UPS software is included with the supply of UPS systems. It operates in the background and communicates with the Rittal UPS in an event-oriented manner via a serial interface. As soon as a malfunction is identified, a freely configurable shutdown routine may be used to shut down the systems automatically. All current operating systems are supported. Several network servers may be controlled simultaneously via the software. For each additional server, only an RCCMD (remote control command) licence is needed. The software also contains professional UPS management with the option of sending individual messages via e-mail, fax or mobile phone. A diverse spectrum of information is documented in the event memory.

Software benefits:
- Software compatible with all standard operating systems, included with the supply.
- HPOpenView plug-in for Windows included in the software package.
- If several servers are shut down via RCCMD, permanent polling of the servers is not necessary, which considerably reduces the system load. Each additional server requires an RCCMD licence.

UPS, single-phase, output range 1 – 6 kVA



Rittal Modular Power Concept (PMC)

Supply includes:
1-phase UPS systems based on the double-conversion technology with/without battery pack.

Available on request:
Replacement batteries,
AS 400 interface adaptor.

Also required:

Country-specific connection cables are required to operate the UPS systems.
Model No. see page 771.

Stored energy times (in minutes) in the event of a power failure at 100 %/ 50 % load:

Maintenance-free lead battery, service life approx. 5 years according to EUROBAT.
Operating environments:
Temperature: 10°C – 40°C to 1500 m NN
Relative humidity: 20 – 90 %, non-condensing

USV application examples Page 750 **UPS, 3-phase** Page 754

UPS, three-phase, output range 10 – 120 kVA per rack

A modular, 3-phase technology which meets the growing requirements of the business-critical infrastructure. These days, no company can afford to have its business processes interrupted as a result of hardware errors, production failures or a breakdown in communications.

The Rittal UPS concept is more than just an uninterruptible power supply, it is a new concept in voltage protection, offering decisive advantages compared with traditional double-conversion 3-phase UPSs.

Benefits of the Rittal Modular Power Concept (PMC)

Performance/modularity/ redundancy
PMC is a new, 3-phase, modular N+1 redundant UPS technology.
PMC enables simple output expansion to cope with rising output demands.
PMC is more than just a UPS – it is a new concept in power supply (Modular Power Concept – PMC) offering key advantages compared with conventional double-conversion 3-phase UPS technology.
PMC is a flexible protection system consisting of 3-phase UPS modules in the output categories 10, 20, 30 and 40 kVA.
The modules may be extended without restriction in order to increase the overall output or achieve redundancy.

Scalability
Retrofitting of individual modules while the **system is operational** (hot swap) as required. This UPS offers an infrastructure with a permanently high level of availability.

High availability
Each UPS module operates **independently with its own intelligence.**

Monitoring
Simple and proven with **optional SNMP adaptor.**

Service-friendly
Individual modules may be exchanged, leading to **fast response times** in case of a malfunction plus enhanced availability.

Other features

Rittal offers a diverse range of pre-configured variation options for the UPS, embeded in a tried-and-trusted TS 8 enclosure.

Tailored to the requirements of a modern infrastructure in terms of space, performance and availability.

Rittal Modular Power Concept (PMC)

PMC is an innovative power protection system which ensures a high level of availability for critical applications by combining modularity (flexible, unlimited scalability and redundancy) with decentralised parallel architecture or DPA (redundant protection without “single point of failure”). Modularity supports easy upgrading of the capacity or battery time of the UPS system. The PMC UPS not only protects the critical load, but also the environment. Thanks to the high operating ratios (low power loss), low input distortion factor (low emission of harmonics from the mains end) and low noise generation, the PMC UPS has proven itself to be an environmentally compatible product.

Key properties of the PMC at a glance:
Modularity, redundancy, scalability, eco-friendliness, serviceability.

Modular Power Concept

The Rittal Modular Power Concept (PMC) allows easy adaptation to customer-specific reuqirements, thanks to its modular character, combined with investment security and a high level of availability.

The modules are integrated into prepared Rittal TS 8 UPS enclosures, where they may be extended whilst the system is operational.

PMC module

- Every individual UPS module contains a rectifier/booster, inverter, a static bypass and a separate CPU which monitors and controls all parts and coordinates parallel communication with the other modules.
- The modules are available in the output sizes 10, 20, 30 and 40 kVA and are prepared for easy 482.6 mm (19″) integration into the Rittal TS 8 UPS enclosure.
- The weight of the modules ranges from 40 kg (10/20 kVA) to 59 kg (40 kVA).
- In conjunction with the batteries, a diverse range of combinations may be quickly and easily compiled.
- Parallel connection occurs within the enclosure, thus facilitating a space-saving configuration of the UPS system.

UPS classification

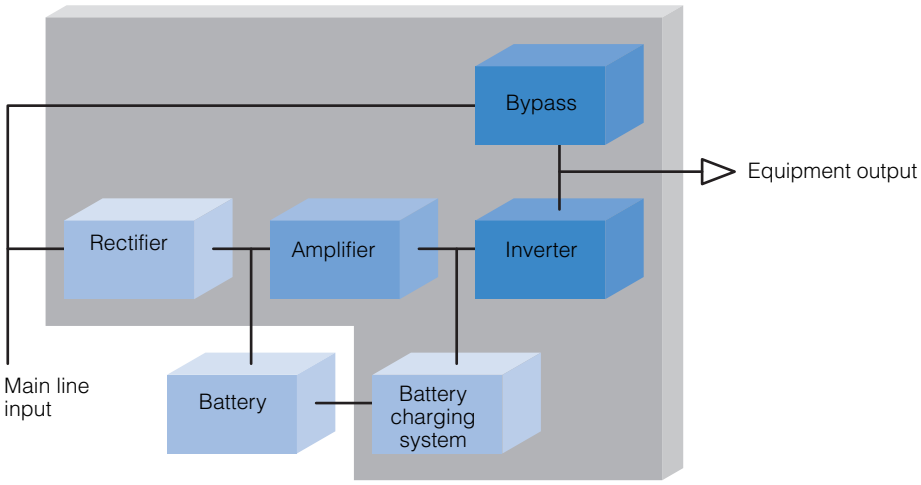
In order to facilitate comparability of UPS appliances from different manufacturers, a classification has been developed on the basis of operating response.

Modules bearing the code VFI-SS-111[1)] under the new IEC 62 040-3 classification are truly outstanding.

These UPS modules are transformerless, genuine online, double-conversion UPSs with static bypass.

[1)] New standard of high availability to protect the server environment.

UPS modules



UPS application examples Page 750 **UPS, 1-phase** Page 752

Redundant UPS concept

New standard of high availability to protect the server environment

Parallel connection of UPS systems:

- Increase capacity to enable the system to supply a greater load than a single installation.
- Redundancy, to increase UPS availability.

The fault-tolerant DPA (Distributed Parallel Architecture) design protects against “single point of failure”, and, therefore, ensures permanent availability.

Rittal PMC (2 modules and battery)

This enclosure has been developed for 2 modules with n+1 redundancy with a battery with a short autonomy time, in order to achieve the smallest possible basic surface area.

Modules are available in 10, 20, 30 and 40 kVA.

What is Distributed Parallel Architecture (DPA)?

The decentralised parallel architecture (DPA) of the modules includes integrated control electronics (CPU) for a rectifier, booster, inverter and static bypass. The CPU of each UPS module also has its own parallel intelligence. The commonalities of a complete UPS system with several modules are confined to control of the parallel bus connection.

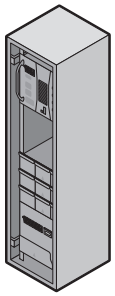
DPA guarantees supply of UPS power as long as the UPS power is higher than or equal to the critical load. This occurs without the UPS switching to bypass.

Switching to bypass only occurs if there is an overload or a short-circuit on the load side.

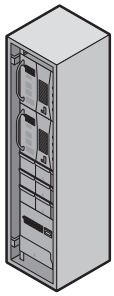
To consistently increase the availability, DPA is an extension of the bypass, so as to protect or ensure the supply of the critical load in the event of a short-circuit or overload.

High availability

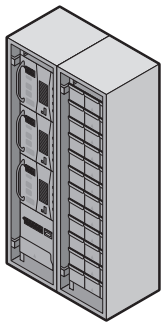
Redundancy means that at least two or more modules always share the critical load equally. In the event of failure of a UPS module, the other will assume the entire connected load without interruption.



One PMC module 10 – 40 kVA with batteries in a TS 8 enclosure.



Two PMC modules 10 – 40 kVA each with batteries in a TS 8 enclosure.



Three PMC modules 10 – 40 kVA each with separate battery enclosure.

UPS application examples Page 750 **UPS, 1-phase** Page 752

Scalable UPS concept

Extend your system at the same speed as your business.

The challenges faced by your infrastructure not only include the current circumstances, but also in particular the requirements of the future. Thanks to the scalable concept, your installation is easily extended.

Integration of up to three modules in one enclosure

This achieves maximum flexibility.

Your output may be easily extended by adding a further UPS module.

This can occur as a “hot swap” with the system operational, without needing to switch the system to bypass.

For this configuration, an additional battery enclosure is always required. The autonomy times may be flexibly adapted to your requirements.

Environmentally compatible UPS concept

High level of efficiency

- Thanks to the transformerless technology and the ESIS (Energy Saving Inverter Switching) technology, a 5 % higher efficiency is achieved, on average, than with conventional UPS systems. With efficiencies of up to 96 % operating costs are reduced, as is heat dissipation into the environment.

Low noise levels

- The noise level is dependent on the load; at <70 % of the nominal load the level is significantly reduced. This leads to a pleasant, user-friendly noise level in the environment.

Battery protection and battery management

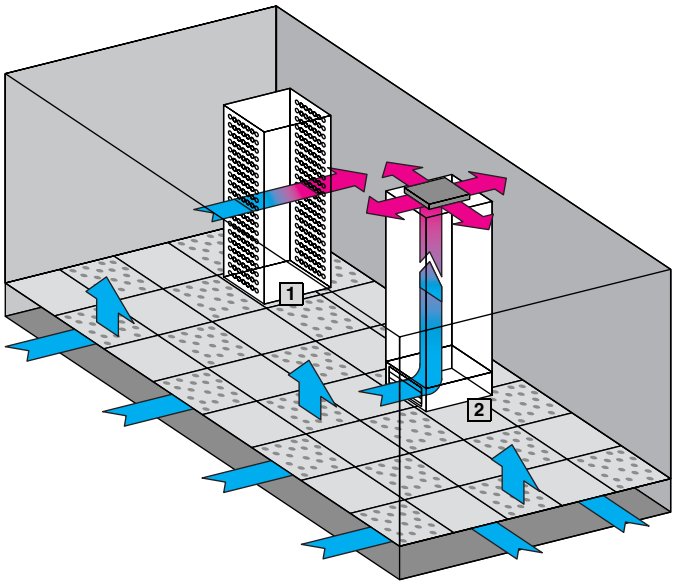
The batteries are protected from overcharging by ripple-free charging electronics. The electronics regulate the charge current depending on the ambient temperatures. The built-in flexible battery management (FBM) periodically checks the “fitness” of the batteries and automatically generates alarms in case of irregularities.

UPS application examples Page 750 **UPS, 1-phase** Page 752

Perfect solutions for every application

From passive air climate control to active liquid cooling of high-performance CPUs, Rittal offers the full range of components and systems. They are designed precisely according to your requirements and application spectrum. Allowance is made, not only for the conditions inside the rack, but also for the ambient conditions.

Software-assisted planning helps to minimise investment costs and also offers peace of mind.



Passive cooling (use of the ambient air)

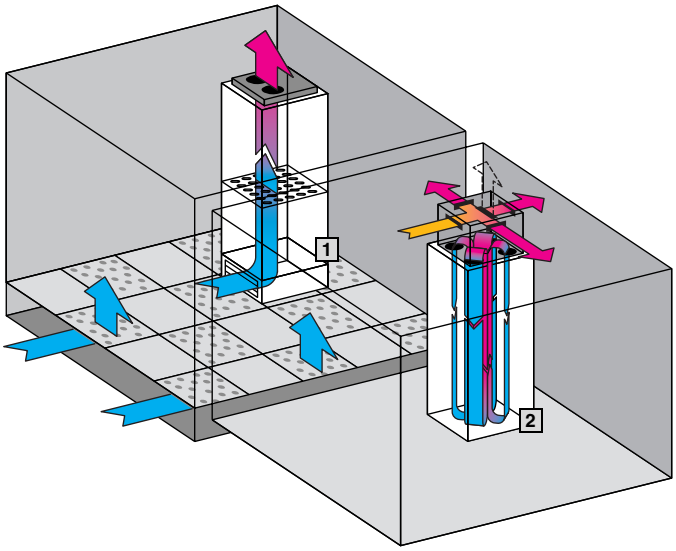
The air cooled via the regular ambient air or via the building's air-conditioning system is routed into the raised floor for rack cooling.

Doors with 78 % open surface area (diagram 1) or openings in the base/plinth and roof (diagram 2) ensure maximum air throughput via convection in conjunction with the fans.

Diagram 1 Horizontal cooling: 2 doors with high air throughput (78 % free space per door)

Diagram 2 Vertical cooling: via vented base/plinth and roof ventilation

See page 759.



Active cooling (use of the ambient air)

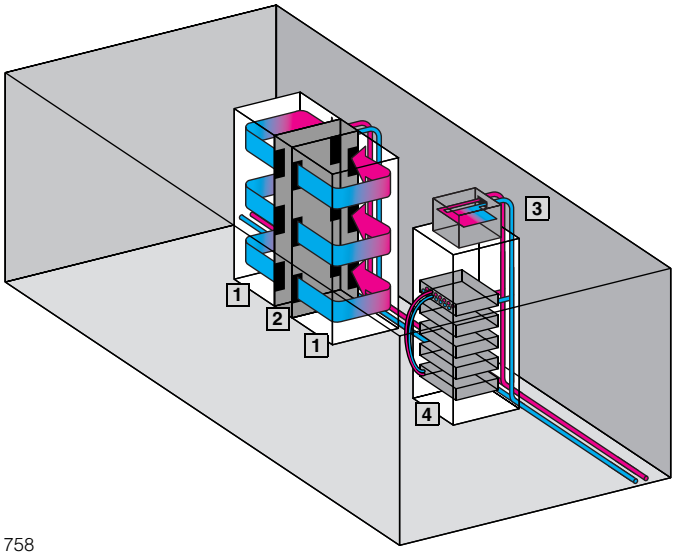
Fan systems for active cooling (diagram 1) amplify the air exchange inside the rack and use ambient air for cooling.

Active, rack-related cooling

By contrast, rack-related, active cooling (diagram 2) is capable of reducing the interior temperature of the rack to below the ambient temperature. This cooling technique is very effective with an appropriate room volume and in industrial environments.

Diagram 1 Fan systems, see page 759.

Diagram 2 Cooling units and rack-mounted recooling system 19″, see page 760.



High-performance cooling (liquid cooling, independent of the ambient air)

With liquid, under the same volumetric flow, approximately one thousand times as much heat loss may be dissipated as with air. This opens up a brand new dimension in cooling.

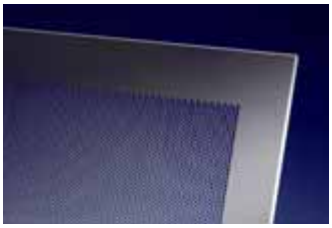
Liquid cooling systems for rack cooling
Extremely high heat loads are dissipated via air/water heat exchanger systems (diagram 2) from the racks (diagram 1).

Liquid cooling systems (4) for component cooling
CPUs, as well as power packs, hard disk drives and other electronic components are cooled directly – effectively and quietly.

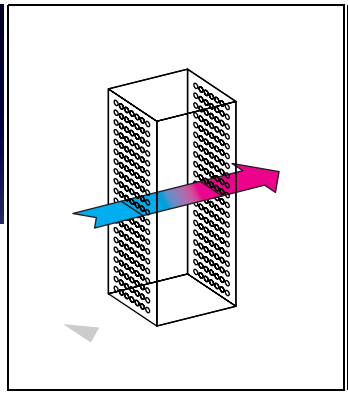
Diagram 1 Server racks
Diagram 2 LCP (Liquid Cooling Package)
Diagram 3 Air/water heat exchanger
Diagram 4 CPU cooling

See page 760.

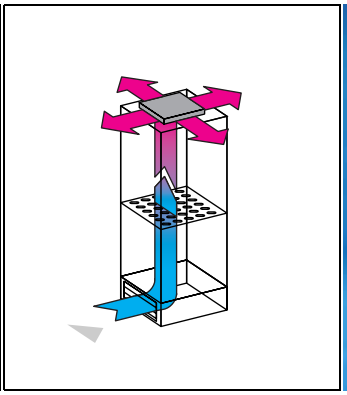
Passive cooling (use of the ambient air)



The perforations in the doors or openings in the base/plinth and roof ensure maximum air throughput via convection in conjunction with the equipment fans.



Horizontal ventilation
A high air throughput, stylish design and outstanding security are provided by the doors (with 78 % free surface area per door) of the server racks.



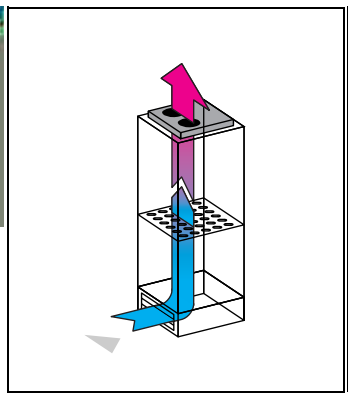
Vertical ventilation
Ventilation base/plinth, roof vent and slotted component shelves ensure heat dissipation.

Air baffle system
Cool air from the hollow base is routed over the base/plinth and distributed via the door in a targeted manner.

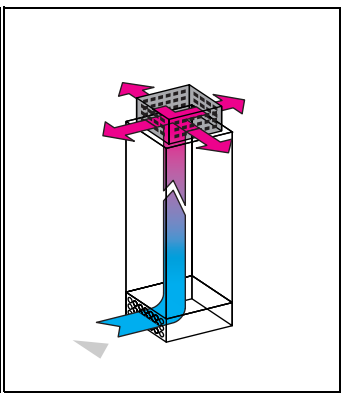
Active cooling (use of the ambient air)

Fan systems to reinforce air exchange

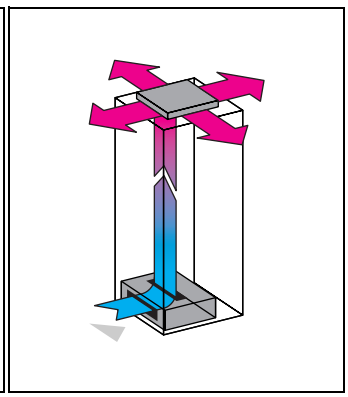
Rittal fan and filter units, see page 636.



Fan roofs
Various designs and outputs, extendible with fan kits. Fast assembly tailored to racks,
see page 647.

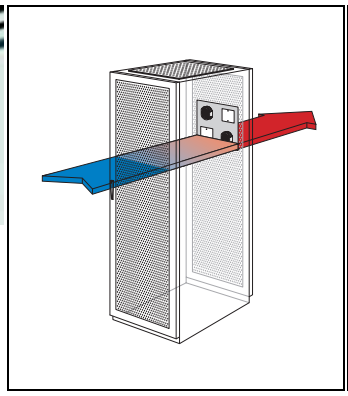


Roof-mounted fans
Quiet performance (1500 m^3/h) for office applications, wired ready for connection, easy assembly,
see page 647.

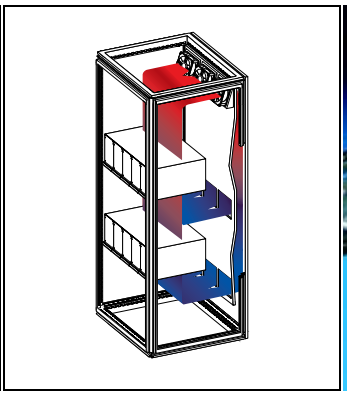


Centrifugal fan/rack-mounted fan
Centrifugal fan,
Rack-mounted fan,
Vario rack-mounted fan,
see page 645.

Fan systems to reinforce air exchange and circulation inside the rack



Fan cross member
For the perforated door of TS 8 server racks.
Air throughput up to 1200 m^3/h,
see page 652.



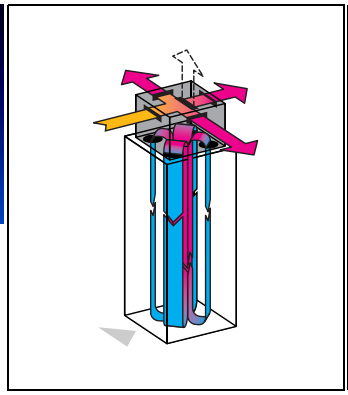
Internal fan mounting panel
for TS 8 enclosures. For improved air blending and heat dissipation,
see page 653.

Internal fan
To avoid hot spots and support climate control components,
see page 653.

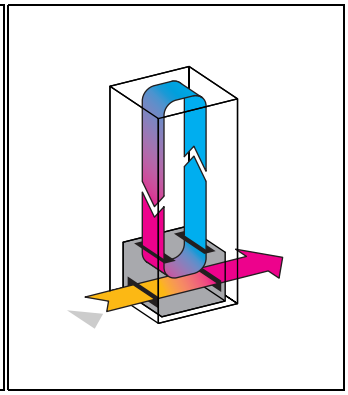
Active, rack-related cooling

Cooling of the rack interior to below the ambient temperature!
The three systems shown opposite are specifically designed for the cooling of servers, IT and electronic components.

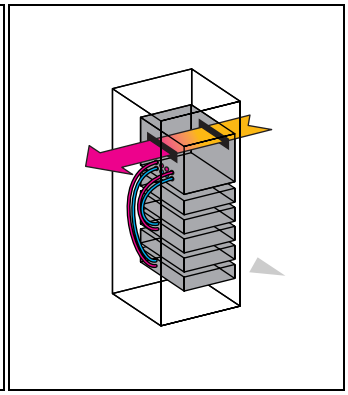
Rittal roof-mounted and wall-mounted cooling units,
see page 590.



Roof-mounted cooling unit (office application)
Useful cooling output 1100 W at an extremely low noise level,
see page 590.



Rack-mounted cooling units 482.6 mm (19″)
Useful cooling output 1000 W, simple installation in the 482.6 mm (19″) level,
see page 644.

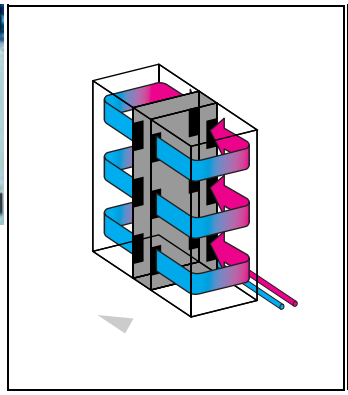


Rack-mounted recooling system 482.6 mm (19″)
Liquid-cooled computers are supplied directly via 6 cooling circuits.
Cooling output 1000 W,
see page 673.

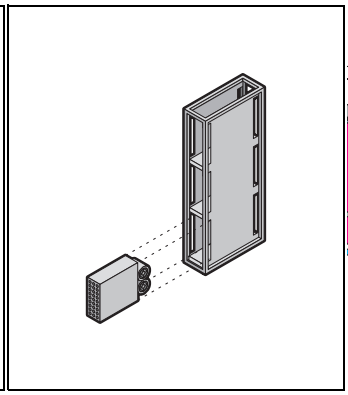
High-performance cooling (independent from the ambient air)

Liquid cooling systems to dissipate high heat loads
Also suitable for use in confined rooms without air-conditioning by using external recooling systems.

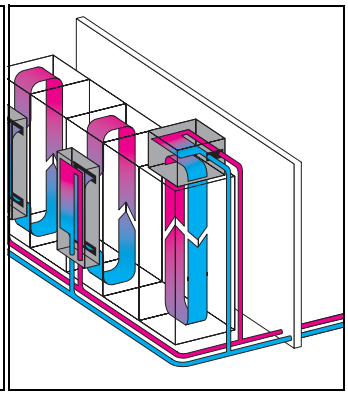
Recooling systems for liquid cooling,
see page 608.



Liquid cooling package
This cooling rack is fitted with up to 3 cooling modules (air/water heat exchangers),
see page 672.

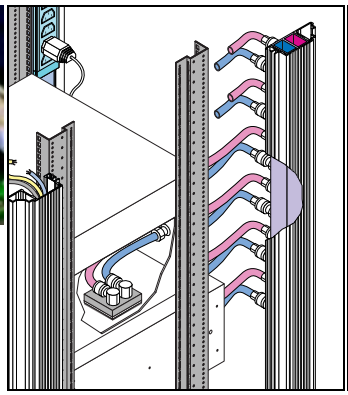


It is bayed with one or two TS 8 server racks (H 2000 x D 1000 mm).
Useful cooling output per module 4000 W (max. 12000 W),
see page 672.

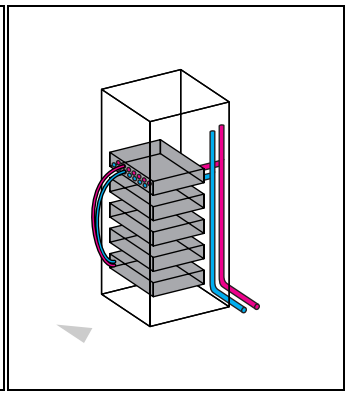


Air/water heat exchanger
Installation: Roof-mounting, wall-mounting and as TS 8 side panel (H 1800 x D 600 mm).
Useful cooling output from 600 to 4000 W,
see page 626.

Liquid cooling systems for component cooling
CPUs, as well as power packs, hard disk drives and other electronic components are cooled directly – effectively and quietly.

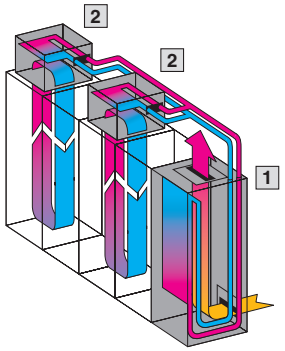


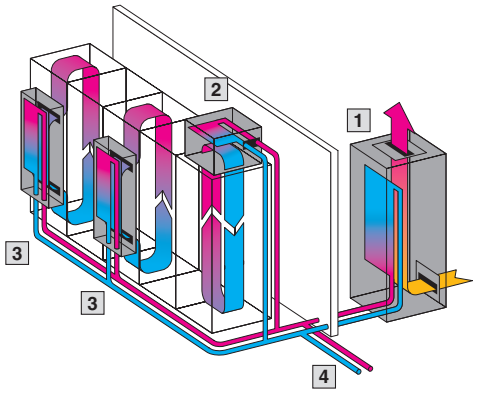
Cooling circuit distributor for racks
Pack 1 for 20, pack 2 for 40 CPU cooling circuits. Enclosure heights 1200 and 2000 mm,
see page 674.



Cooling circuit distributor 482.6 mm (19″)
Complete kit or individual distributors with drip-free connection of up to 10 servers,
see page 675.

Background technology: Recooling systems





Recooling systems ensure central cooling and supply of the cooling medium for liquid cooling systems. This makes it possible to achieve spatial separation between the generation of cold air and cooling itself, for the temperature-neutral expansion of data centres.

1 Recooling system
2 Air/water heat exchanger, roof-mounted
3 Air/water heat exchanger, wall-mounted
4 Further cooling options

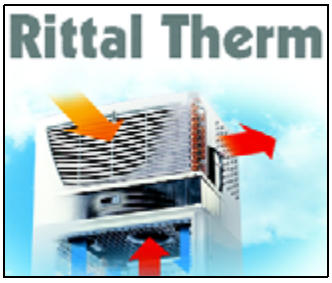
Recooling systems solve all cooling tasks via a system of piping.
As well as IT and electronic components, production processes, machines and systems are also cooled.
A range of products from 960 W to 172 kW meets all required cooling services.

Recooling systems Mini
Smart design,
simple assembly,
cooling output from 960 to 4500 W,
see page 608 – 609.

Recooling systems in the TS 8 Top enclosure system
Compact design,
bayable with TS 8 racks,
cooling output from 6000 to 25000 W,
see page 615 – 616.

Recooling systems in floor-standing and industrial enclosures
Cooling media water or oil,
cooling output from 2100 to 172000 W,
see page 617.

Advice, calculation, planning



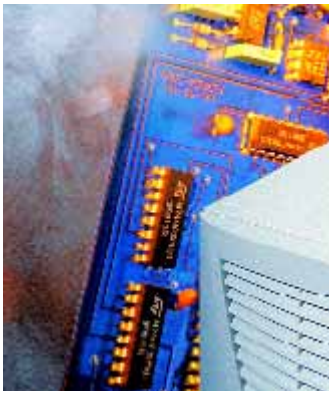
- **Software Rittal Therm**
  Simple calculation of heat loss, calculation of dissipation via the surface, device selection.
- **CFD** (Computer Fluid Dynamics) offers system reliability, because the temperature, pressure and flow speed at every point of the calculated space are simulated at the planning phase.
- **Eliminate risks through thermography.** Even with the prototype of your plant or machine, the Rittal thermography service offers precise imaging of the real temperature conditions on site.
- **Support**
  Project planning,
  tests and measurements in the Rittal climate laboratory,
  commissioning,
  maintenance

Rittal CMC-TC – Security management concept

Effective prevention, comprehensive security and central organisation of rack security. The new, modular CMC-TC facilitates the implementation of highly individual security solutions, thanks to its modular plug & play system and, therefore, affords a high level of protection for your investments.

More detailed information can be found at:

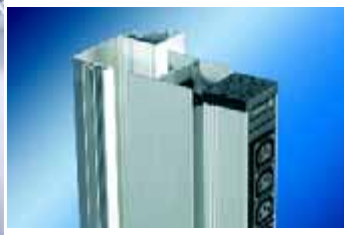
www.cmc-tc.com



Climate Control

Consistent low temperatures for electronics are a key safety factor in the network and in the production process. Monitoring of the internal rack temperature and the control of climate technology to reliably dissipate heat loss is provided by the Rittal CMC-TC security system to minimise operating costs.

Power Management



Power requirements are on the increase, and there is a growing need for maximum availability of modern IT infrastructures. Rittal addresses the associated additional requirement for redundant power supply with a new, intelligent power distribution system which may be integrated with no loss of enclosure internal rack volume.

Access Control

Access authorisation is one of the most important security factors in any company. With the CMC-TC, this is registered for the entire network. In case of an unauthorised access attempt, the system raises the alarm. For example, doors may be opened by authorised individuals via a numerical code, magnetic card, smartcard, or the latest transponder technology.

[1)] Up to a maximum of 5 sensors may be connected in series.

The sensor units (SU)

Universal I/O unit

- The I/O unit is the measurement and alarm module.
- Alarm sensors may be connected (e.g. motion detector).
- Analog measurements can be transmitted and monitored (temperature, humidity, 4 – 20 mA).
- The system is capable of switching relay output modules.
- The unit has 4 universal ports for 4 sensors/actuators.
- The I/O unit must be connected to the PU. Data exchange and energy supply to the electronics are provided in this way.

Climate unit

- The climate unit serves to control the fans and hence regulate the temperature.
- The physical airflow of the fan is monitored with due regard for the controller.
- If no temperature sensor or airflow sensor is used, the two universal ports can also be fitted with other sensors (see table).
- Simple fan connection via IEC socket.
- The unit is designed for one fan system.
- The climate unit must be connected to the PU.

Access unit

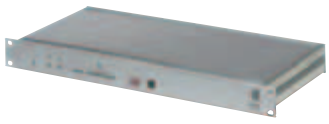
- The access unit serves to control door systems.
- The doors can be opened remotely via the network.
- The doors can also be opened by selected individuals via a coded lock, magnetic card or smartcard.
- The doors of enclosures or rooms can be monitored and activated.
- The unit is designed for two separate door systems.
- The access unit must be connected to the PU. Data exchange and power supply to the electronics are provided in this way.

Processing unit (PU)

- The processing unit (PU) forms the basis of the monitoring system.
- The system can be incorporated directly into the user network via the network interface 10BaseT, TCP/IP, SNMP.
- The system has an integral web server, through which the system can be configured.
- The system can optionally be linked to the CMC-TC master via the network interface.

- The monitoring functions are determined by the sensor units or sensors/actuators linked to the PU, and can therefore be flexibly selected.
- Up to 4 sensor units may be connected in any given combination (I/O, access, climate, FCS).

Master unit



- The CMC-TC master is required in all situations where it is necessary to monitor large numbers of security-relevant factors or where high demands are placed on the system.
- The CMC-TC master offers high performance and conserves IP resources.
- The PU with the sensor units is always required for monitoring.

- Up to 10 processing units (PUs) may be connected to a sub-network as slaves.
- The master offers a 10/100BaseT interface to the user network and comprises all monitoring variables on HTTPS and SNMP.
- The system can be connected and operated directly via the Rittal SSC.

Sensor units

1

2

3

There is a choice of 4 sensor units:

I/O unit:
The alarm and measurement module

Access unit:
For controlling door systems

Climate unit:
For fan control and monitoring

FAN Control System FCS for DC fans

Benefits:

- Choice of functions thanks to 4 sensor units (active PSM, RTT I/O unit, RLCP on request)
- Open to customer-specific sensors/actuators
- Automatic sensor detection
- Simple installation based on the plug & play system
- No additional power pack required
- Choice of mounting on the enclosure frame or 482.6 mm (19″) mounting angles
- I/O unit: Freely selectable sensors/actuators
- Access unit: Personalised access detection
- Climate unit: Fan control with airflow monitoring

1 Interface for the sensor unit and processing unit connection. Used for data communication and power supply.
Cable 7320.470/.472/.481.

2 Just one press of the button, and the system automatically reconfigures itself.

3 Up to 3 systems may be integrated into the 1 U mounting unit: Model No. 7320.440.

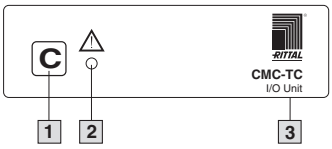
Technical specifications:
The sensors/actuators are set up via an automatic electronic ID system. Because it is installed using a flexible plug & play system, there is no need for time-consuming programming and wiring. Power is supplied centrally via the connection cable to the PU.

Technical specifications:
W x H x D: 136 mm x 44 mm (1 U) x 129 mm
Temperature application range: +5°C to +45°C
Humidity application range:
5 % to 95 % relative humidity,
non-condensing

Protection category:
IP 40 to EN 60 529

CMC-TC sensor unit I/O unit

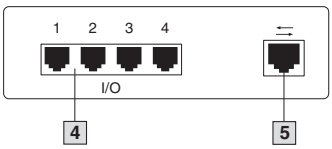
This sensor unit allows alarm messages, status messages and measurements to be forwarded or remote actions to be executed via relay output modules.
The I/O unit has 4 universal inputs/outputs. The sensors/actuators listed below can be operated here.
The interface to the user network is via the PU (processing unit), which is always required to operate the system.



1 **Control key** for detection/set-up of the sensors/actuators

2 **Alarm LED** signals alarms or configuration changes

3 **Mounting fixture** for 7320.440 or 7320.450



4 **RJ 12, 4 inputs for sensors/actuators** (see table)

5 **RJ 45, connection** to PU 7320.100 via connection cable 7320.470/.472/.481
(The unit is also supplied with power via this connection.)

Sensor unit I/O unit	**Model No. DK**
4 universal inputs or outputs	**7320.210**

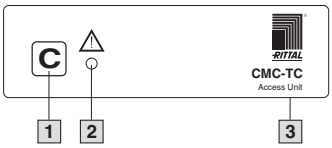
[1)] Up to a maximum of 5 sensors may be connected in series.

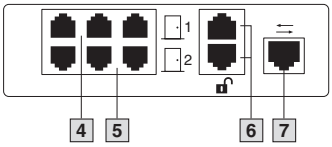
For selection aid, see page 770.

c UL us LISTED

CMC-TC sensor unit Access unit

With this sensor unit, one or two doors may be released for access via the network, or personalised opening via a read system (e.g. smartcard reader) may be initiated. The system also monitors the status of the door, handle or latch. Authorised access codes can be set up via HTTP. The sensors/actuators/readers listed below can be operated here.
In order to operate the unit, at least one access sensor and at least one latch (e.g. handle) per door system must always be used.





1 **Control key** for detection/set-up of the sensors/actuators

2 **Alarm LED** signals alarms or configuration changes

3 **Mounting fixture** for 7320.440 or 7320.450

4 **Inputs for access sensor, handles** Latch system 1 (see table)

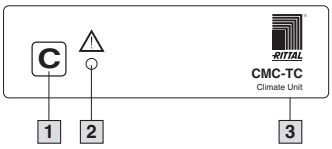
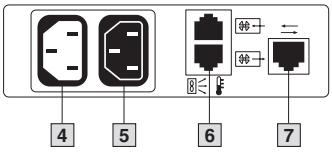
For selection aid, see page 770.

CMC-TC sensor unit Climate unit

A temperature control circuit is installed with this sensor unit. Temperature setpoints are set via the PU, and these are compared with the actual temperature. Depending on the evaluation, the fan system is activated. The function of the fans can also be monitored with an airflow sensor. Monitoring is only active whilst the fan is operational. Other sensors may optionally be connected to the unit.
In order to operate the unit as a temperature fan control circuit, at least one temperature sensor must always be used.





1 **Control key** for detection/set-up of the sensors/actuators

2 **Alarm LED** signals alarms or configuration changes

3 **Mounting fixture** for 7320.440 or 7320.450

4 **Input for fan supply** 115/230 V AC, cable 7200.210 – .215

5 **Output to fan** with cable 7200.215

6 **RJ 12, 2 inputs for sensors/actuators** (see table)

7 **RJ 45 connection** to PU 7320.100 via connection cable 7320.470/.472/.481 (The unit is also supplied with power via this connection.)

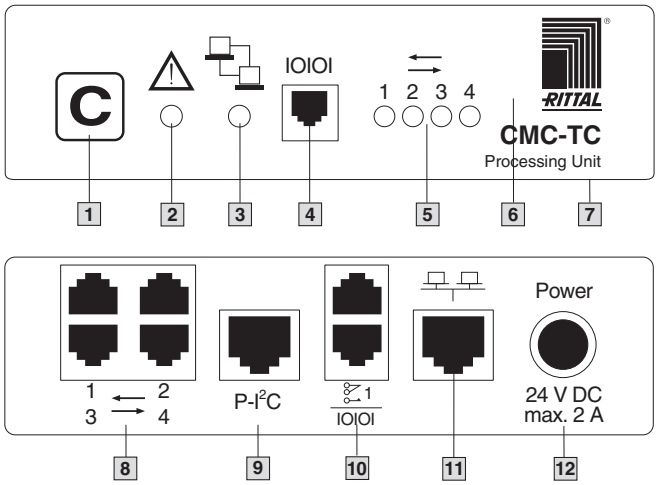
Monitoring system processing unit



Benefits:
- Freely selectable monitoring functions
- Sensor/actuator ports extendible
- Network connection TCP/IP SNMP
- Integral web server for configuration
- Automatic menu generation
- Simple installation based on the plug & play system
- Alarm continues to record even in the event of a network failure
- Built-in real-time clock
- May be used via power supply unit for 115/230V AC or 48 V DC may be used
- Choice of mounting on the enclosure frame or 482.6 mm (19″) mounting angles
- The protocol for the master/slave system is TCP/IP SNMP
- May be used for large data centres or small individual applications

The processing unit forms the basis of the CMC-TC system. This unit is required for every monitoring application.

Interface to the customer:
The PU can be incorporated directly into the user network via 10BaseT. The PU can also be linked to the master 7320.000 via this interface (TCP/IP, SNMP).

Interface to the sensors/actuators:
The PU provides 4 open ports for sensor units. The sensor units determine the function of the PU. There is a choice of 4 different sensor units (I/O, access, climate, FCS) with varying functions. In this way, the monitoring functions may be freely combined.

Fast, easy programming and installation:
The sensors/actuators are set up via an automatic electronic ID system. Installation is via a flexible plug & play system.
This eliminates the need for time-consuming programming and wiring.

Power supply:
Power is supplied centrally via a power pack in the PU. The connected sensor units and all connected sensors are supplied with power in this way. There is a choice of two input voltages (AC power pack 7320.425 and DC power pack 7320.435).

c UL us LISTED

Model No. DK	7320.100
W x H x D in mm	136 x 44 (1 U) x 129
Network interface	Ethernet to IEEE 802.3 via 10BaseT half-duplex 10 Mbit/s
Protocols	TCP/IP, SNMP V1.0, TELNET, FTP, HTTP

Rated voltage	24 V DC
Serial interfaces	RS 232
Ports for sensor units	4 jacks RJ 45, shielded
Bus system	Power I²C for extension unit voltage AC 7200.520
Alarm relay output	Change-over contact max. 24 V DC 1 A
Audio display	Piezo signal generator
Time function	Real-time clock
Temperature application range	+5°C to +45°C
Humidity application range	5 % to 95 % relative humidity, non-condensing
IP protection category	IP 40 to EN 60 529

1 Control key
The control key is used for sensor/actuator detection, set-up of the system and acknowledgement.

2 Alarm LED
The LED signals alarms or configuration changes.

3 Link/Traffic LED
The LED indicates the status of the 10BaseT network interface.

4 RS 232 interface RJ 10
For programming via a serial PC interface.

5 LEDs channels of the sensor units
The LEDs indicate the status of the attached sensor units.

6 Audio alarm
There is an audio alarm signalling device integrated into the PU.

7 Mounting attachment
For attachment with individual bracket 7320.450 or 1 U mounting units 7320.440.

8 Inputs for the RJ 45 sensor units
Up to 4 sensor units may be connected to the PU via the 4 inputs. The sensor units determine the function of the PU.
There is a choice of 4 sensor units:
– I/O unit 7320.210
– Access unit 7320.220
– Climate unit 7320.230
– FCS 7320.810
Connection cable 7320.470/.472/.481.
Other connections available on request:
RTT I/O unit see page 764
active PSM see page 775
RLCP see page 672.

9 Power I²C bus RJ 45
Up to 2 voltage extension units 7200.520 may be connected via the power I²C Bus.
Up to three AC voltages may be monitored with every extension unit.
Connection cable 7320.470/.472/.481.

10 Alarm relay RJ 12/ RS 232 RJ 12
The upper RJ 12 jack provides a change-over contact for the PU alarm relay.
Connection cable 7200.430.
The lower RJ 12 jack provides a serial interface (display unit/GSM module/ISDN unit).

11 Ethernet 10BaseT RJ 45
Integral Ethernet interface to IEEE 802.3 via 10BaseT half-duplex 10 MBit/s.

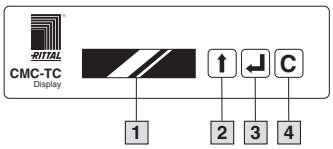
12 Voltage supply
The rated voltage for the PU is 24 V DC. There is a choice of power packs with varying primary voltages.
AC power pack 7320.425.

Also required:

For selection aid, see page 770.

CMC-TC display unit

For the local representation of CMC alarm and status messages on the rack.
The CMC-TC display unit is designed for connection to processing unit 7320.100. It comprises 2 lines each with 20 characters. The character height is 3 mm. The display is illuminated in order to ensure legibility even in poor light conditions. It is mounted in the 1 U component support 7320.440 or with the individual mounting unit 7320.450.
Power supply is via the processing unit.
The display is also ideal for use as a service tool for commissioning.

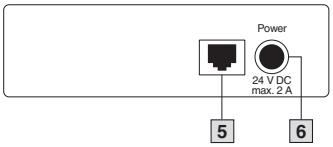


1 **LCD display** illuminates 2 x 20 characters

2 **“Change”** for selection

3 **“Enter”** to confirm

4 **“Clear”** to delete/acknowledge



5 **RJ 12 jack for connecting** to the serial interface of the PU

6 The GSM unit may optionally be supplied with **24 V DC,** 150 mA via this input. For applications with the PU, this is not necessary.

CMC-TC display unit	**Model No. DK**
Alarm text display	**7320.490**

Technical specifications:
- Plug & play installation via RJ 12 connector
- 2 x 20 characters
- Character height 3 mm
- Illuminated

Supply includes:
CMC-TC display module, connection cable for connection to the processing unit, operating instructions, assembly parts.

Note:
Only one tool, either “Display”, “ISDN Unit” or “GSM Unit”, may be connected to one PU.

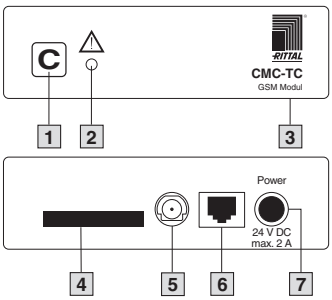
Also required:

Components	**Model No. DK**
Processing unit	7320.100

CMC-TC GSM unit

In order to configure a redundant transmission channel or if there is no LAN infrastructure available, the unit may be used for alarm forwarding. The alarm signal is designed in SMS format. The GSM unit is linked to the processing unit 7320.100 via a serial interface. The power supply is likewise achieved via the connection cable. The only other thing needed to operate the module is a SIM card. This may either be a “data only” card or a conventional SIM card.
The GSM unit operates in the 900/1800 MHz frequency range – in other words, either D or E network cards may be used. Up to four target call numbers may be set and allocated to the various events.
To activate CMC-TC switch outputs, an SMS message may be sent to the modem via any commercially available mobile phone, and actions executed via this route. The aerial included with the supply has a connection cable of 2.8 m. Voltage supply is achieved via the processing unit.

Other functions, where offered by the provider:
- Voice mail



1 **Alarm LED**

2 **GSM LED**

3 **Mounting fixture** for 7320.440 or 7320.450

4 **SIM card rack mount**

5 **Aerial system**

6 **RJ 12 jack for connecting** to the serial interface of the PU

7 The GSM unit may optionally be supplied with **24 V DC, 500 mA** via this input. For applications with the PU, this is not necessary.

GSM unit	**Model No. DK**
SMS function	**7320.820**

A commercially available SIM card for D or E networks must be provided by the customer.

Note:
Only one tool, either “GSM Unit”, “ISDN Unit” or “Display”, may be connected to one PU.

Also required:

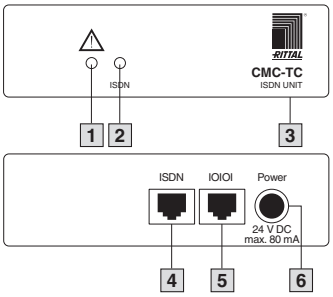
Components	**Model No. DK**
Processing unit	7320.100

Additional units

CMC-TC ISDN unit

In order to configure a redundant transmission channel or if there is no LAN infrastructure available, the unit may be used for alarm forwarding. The alarm signal is designed in SMS format. The ISDN unit is linked to the processing unit 7320.100 via a serial interface. The power supply is likewise achieved via the connection cable. An ISDN connection is required in order to operate the module (the requirements for an ISDN connection). Up to four target call numbers may be set and allocated to the various events.
This variant of alarm reporting may also be used in countries with “SMS in the fixed network”. Furthermore, with “SMS in the fixed network”, it is also possible to control switch outputs via an SMS.
Power supply is via the processing unit.

Other functions, where offered by the provider:
- Voice mail



1 **Alarm LED**

2 **Status ISDN-LED**

3 **Mounting fixture** for 7320.440 or 7320.450

4 **RJ 45 ISDN jack**

5 **RJ 12 jack for connecting** to the serial interface of the PU

6 The ISDN unit may optionally be supplied with **24 V DC, 80 mA** via this input. For applications with the PU, this is not necessary.

Components	Model No. DK
ISDN unit	**7320.830**

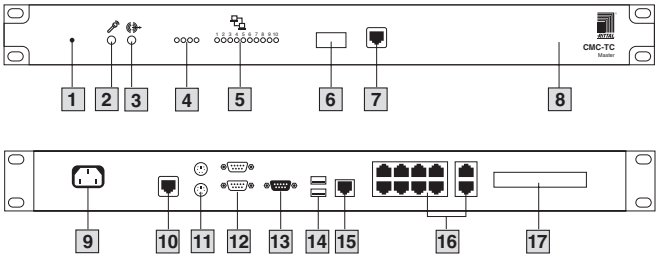
Requirements for the ISDN connection:
- DSS1 (Euro-ISDN) must also be provided when connecting to the ISDN system.
- Point-to-multi-point configuration.

Note:
Only one tool, either “ISDN Unit”, “GSM Unit” or “Display”, may be connected to one PU.

Also required:

Components	Model No. DK
Processing unit	7320.100

Master monitoring system



Property rights:
German registered design
no. 402 02 444

Benefits:
- Centralised administration
- Network connection 10/100BaseT
- Central web server for configuration
- Local administration via PS2/ VGA console
- Logging function for alarm messages
- Link for USB camera
- Free function selection for monitoring
- Ideal for large data centres
- **Web access via SSL 3.0 128-bit encryption**
- **Remote administration via SSH.**

The master system may be connected between the processing unit and the user network. There are ten 10BaseT network inputs available for the processing units (PU). The PUs transmit all monitoring-related data and messages to the master system via TCP/IP, SNMP. The master has a 10BaseT/100BaseT network interface for the user network.

All monitoring data is provided in a separate MIB via TCP/IP, SNMP. The system may optionally be configured remotely, via the integral web server, or directly, via a local console. Basic settings can also be implemented serially via RS 232 or Telnet. A Telnet routing function to the individual processing units is also pre-installed. This provides the user with a clear central monitoring facility.
For example, up to 160 temperature sensors may be accessed or up to 80 enclosure doors may be monitored and activated via one IP address.
Combined applications are also possible, and may be compiled individually from processing units and sensor units. Further functional scope for the CMC-TC master is available on request in the form of a software update. Images may be archived on the hard drive via an optional web camera. USB web camera available on request.

1 Key
Offset system reset key with contact hazard protection.

2 Input for microphone[1)]
3.5 mm jack socket.

3 Output for speaker[1)]
3.5 mm jack socket.

4 Status LEDs
LED 1 Alarm – Alarm system message.
LED 2 changeover 10/100 Mbit/s, network interface user network.
LED 3 Link/Activity, network interface user network.

5 LEDs
for the 10 network inputs of the processing units 7320.100.

6 IrDA[1)]
Infrared interface.

7 RJ 10
RS 232 interface for CMC-TC menu program.

8 Audio alarm
There is an audio alarm signalling device integrated into the master.

9 Voltage supply
The IEC jack supplies the system with power, connection cables 7200.210 to .215.

10 Alarm relays
RJ 12 socket with changeover contact.

11 Keyboard/mouse
PS2 jacks for keyboard and mouse.

12 RS 232
Two serial D-SUB 9 interfaces.

13 VGA interface HD15
Connection for monitor or Rittal SSC.

14 USB interfaces
Standard 1.1, for applications with Rittal camera.

15 Ethernet 10/100BaseT
RJ 45 jack network interface, user network Ethernet 10BaseT/100BaseT, IEEE 802.3 (10/100 Mbit/s), TCP/IP.

16 Ethernet 10BaseT (internal)
Ten RJ 45 jacks, network inputs for the processing units 7320.100
Ethernet 10BaseT, IEEE 802.3 (10/100 Mbit/s), TCP/IP.

17 PCMCIA[1)]
Two PCMCIA ports for applications with the Rittal modem.

[1)] These functions are prepared for specific customer application, on request.

Model No. DK	7320.000
W x D in mm	1 U x 200
Network interface	Ethernet to IEEE 802.3 via 10BaseT/100BaseT, 10/100 Mbit/s
Protocols	TCP/IP, SNMP V1.0, TELNET, SSH, TFTP, HTTPS

Rated voltage	100 – 240 Volt AC, 50/60 Hz
Ports for processing unit	10 jacks RJ 45, shielded, 10BaseT, TCP/IP, SNMP
Serial interfaces	RJ 10 jack RS 232 menu program, 2 D-SUB 9 jacks RS 232
USB	Standard 1.1 for Rittal web cameras
Infrared interface[1)]	IrDA 1.0 (SIR) on the front
PCMCIA[1)]	2 x type I/II or 1x type III for applications with Rittal modem
Relay output module	Change-over contact, max. load capacity 24 V DC, 1 A
Time function	Real-time clock
Temperature application range	+5°C to +40°C
Humidity application range	5 % to 95 % relative humidity, non-condensing
IP protection category	IP 40 to EN 60 529

! Also required:

For selection aid, see page 770.

Camera available on request.

Connection tables

The basic system
The processing unit (PU) is the basis of any CMC-TC application. Connectivity is offered by the network interface (10BaseT, TCP/IP, SNMP) which connects directly into the user network or to the CMC-TC master. The following products are required for each CMC-TC application:

- Processing unit (7320.100)
- Power pack 100 – 240 V 50 – 60 Hz (7320.425) or power pack 48 V DC (7320.435)
- Connection cable for power pack, country-specific (7200.210 – .215)
- Connection cable, sensor unit (7320.470/.472/.481)
- At least one sensor unit (7320.210/.220/.230)
- Programming cable (7200.221)

Connection cable/extension

The cable is used to connect to:
- CMC-TC master
- 24 V power pack for PU
- Active fan unit for TE
- Climate unit (connected fan)
- Voltage monitor
- Voltage expansion unit

Technical specifications:
PVC cable, 3-pole, with IEC connector (non-heating appliances) with contact protection CEE22.

Supply includes:
1 connection cable, length 2.5 m.

Country version	Voltage	Model No. DK
D/F/B	230	**7200.210**
GB	230	**7200.211**
CH	230	**7200.213**
USA/CDN	230/115	**7200.214**
IEC 320 extension	230/115	**7200.215**

Power pack for PU, FCS, FAS

A 24 V DC power pack is required to supply the processing unit with power. There are two variants available:
- The 100 – 240 V AC power pack requires an IEC connection cable to supply the voltage.
- An alternative power pack is designed for the telecommunications sector (48 V battery voltages) and is connected at the input end via a terminal block.

Both power packs include an output cable, 1.65 m long.

Technical specifications 7320.425:
Rated voltage: 100 – 240 V AC, 50/60 Hz
Rated current: max. 1.5 A
Secondary range: 24 V DC, 3 A

Technical specifications 7320.435:
Rated voltage: 20 – 72 V DC
Rated current: max. 2.5 A
Secondary range: 24 V DC, 1.3 A

Primary input voltage	Output voltage	Model No. DK
100 – 240 V AC/ 50/60 Hz	24 V DC	**7320.425**
48 V DC	24 V DC	**7320.435**

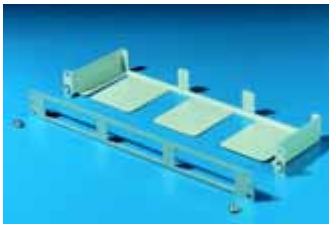
Also required:

Connection cable for DK 7320.425 power pack, see page 771.

Programming cable

The interface cable is used to configure the network parameters in the processing unit and the master unit.
The RJ 10 connector is connected to the front jack of the PU/master, whilst the 9-pole SUB-D connector is connected to a serial PC interface.

Packs of	Model No. DK
1	**7200.221**



Mounting unit 1 U

The mounting unit can accommodate up to 3 sensor units or processing units in the 482.6 mm (19″) attachment level. Cable clamp straps 7610.000 or 7611.000 can be used for cable clamping.

Material:
Sheet steel, spray-finished

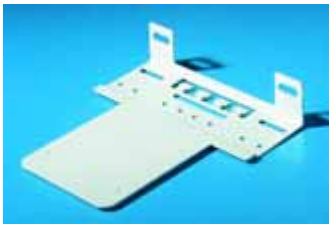
Colour:
RAL 7035

Packs of	Model No. DK
1	**7320.440**

Accessories:

Cable clamp strap, see page 985.

Cables/mounting accessories



Mounting module

The mounting module accommodates individual sensor units or processing units, for mounting on the frame section.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Packs of	Model No. DK
1	**7320.450**

Connection cable RJ 45

This cable is for data exchange and power supply to a sensor unit via the processing unit. There is an RJ 45 connector at each end of the shielded cable.

Length m	Packs of	Model No. DK
0.5	4	**7320.470**
2.0	4	**7320.472**
10.0	1	**7320.481**

Connection cable RJ 10, RJ 12

With the RJ 12 connection cable, the alarm relay output of the processing unit may be used for individual alarm lights/indicators. The RJ 10 connection cable facilitates connection to the CMC socket strip in conjunction with the digital input module. The cable is equipped with an RJ 10/12 connector at one end. The other end is open.

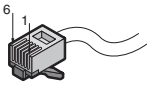
Connector	Length m	Packs of	Model No. DK
RJ 10	5	4	**7200.420**
RJ 12	5	4	**7200.430**

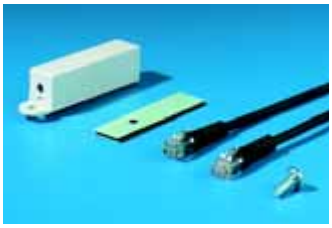
Extension cable RJ 10, RJ 12

The cable is used to extend the sensor supply cables (RJ 12) and individual actuator cables. The cable is equipped with an RJ 10/12 connector at one end. There is an RJ 10/12 jack at the other end.

Connector/jack	Length m	Packs of	Model No. DK
RJ 10	5	4	**7200.440**
RJ 12	5	4	**7200.450**
RJ 12	1	2	**7320.814**

Example: RJ 12





Temperature sensor

The sensor assumes the function of a temperature monitor and contains an ID so that it is automatically detected and set up by the CMC-TC system. It is connected to a sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used. The sensor can also control a fan on the climate unit or fan control system (FCS).

Packs of	Model No. DK
1	**7320.500**

To fit sensor unit:

I/O unit	Access unit	Climate unit	FCS
■		■	■

Technical specifications:
Type: NTC
Resistance: 10 kOhm at 25°C
Tolerance: ±2°C
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Temperature application range:
+5°C to +45°C

Smoke alarm

The smoke alarm is based on an opto-electronic smoke particle evaluation within a measurement chamber. The alarm contains an ID so that it is automatically detected and set up by the CMC-TC system. The power supply and alarm relay to the sensor unit occurs via the supplied connection cable. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	**7320.560**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		■

Technical specifications:
Alarm type: Combustion product alarm (smoke)
Sensor/transmitter: Silicon PIN photodiode/
GaAs infr. LED
Measurement frequency: Once every ten seconds
Power consumption: max. 61 mA
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Dimensions (alarm with base/plinth):
D = 100 mm, H = 50 mm
Temperature application range: +5°C to +45°C

Humidity sensor

The sensor measures relative air humidity and converts it into a frequency signal. It contains an ID so that it is automatically detected and set up by the CMC-TC system. Power supply and data evaluation is performed by the I/O sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	**7320.510**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Technical specifications:
Sensor: With humidity/frequency converter
(50 kHz at 76 % rel. humidity)
Sensor measurement range:
Relative humidity 10...90 % rel. humidity ± 3 %
(at 20°C)
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Temperature application range:
+5°C to +45°C

Internal security

Airflow monitor

The airflow monitor determines whether the fan is achieving its full operating capacity.
Storage damage, dirty filter mats or jammed fan blades are promptly detected and reported by the sensor. The sensor contains an ID so that it is automatically detected and set up by the CMC-TC system. Its switch point is adjustable. The power supply and data exchange to the sensor unit occurs via the attached connection cable. If required, extension cable RJ 12 may be used.

Technical specifications:
Connection: RJ 12 jack, 6-pole on the cable
Connection cable: Length 2 m
Temperature application range: +5°C to +45°C

Packs of	Model No. DK
1	7320.550

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		■

Note:
The sensor can be operated with temperature-controlled fan via the climate unit sensor unit.

Accessories:

Connection cable RJ 12, see page 772.

Voltage monitor

The voltage monitor picks up a mains voltage to be monitored via the mains cable, and reports its status to a sensor unit:
Voltage ON or voltage OFF. The monitor contains an ID so that it is automatically detected and set up by the CMC-TC system. The connection cable, supplied loose, should be used for connection to the sensor unit. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	7320.600

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		■

Technical specifications:
Monitored rated voltage:
230 V AC 50/60 Hz
Connections:
IEC connector, RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Temperature application range:
+5°C to +45°C

Protection category:
IP 40

Also required:

For selection aid, see page 770.

Voltage monitor with IEC switch output

This sensor is used in conjunction with the CMC-TC to monitor voltage limits. The limits may be set via the WEB interface or SNMP. As an additional option, this voltage may also be switched on and off via the module, in order to reboot connected equipment via Ethernet.
It is connected via standard, commercially available IEC320 connectors as the input signal, and an IEC320 socket to connect the equipment.

Technical specifications:
- Plug & play installation via IEC320 connector
- The switching operation may be initiated in a time or event-based manner or via SNMP or WEB
- The maximum and minimum limits of voltage measurement are freely selectable
- Measurement range 100 – 250 V AC, 50/60 Hz
- Max. switching load 250 V AC and 8 A at cosphi = 1
- Tolerance: ±5 % at 20 – 30°C

Note:
The system has two functions. Each function occupies one input of the I/O unit.
1st function: Voltage measurement
2nd function: Relay switching

Packs of	Model No. DK
1	7320.610

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Also required:

For selection aid, see page 770.

Optionally available:

IEC connection cable 7200.210,
German version,
IEC extension cable 7200.215
for connecting the equipment.

Voltage monitor 48 V DC

The voltage monitor picks off a mains voltage to be monitored via the 3-pole jack, and reports its status to a sensor unit: Voltage ON or voltage OFF. The monitor contains an ID so that it is automatically detected and set up by the CMC-TC system. The connection cable, supplied loose, should be used for connection to the sensor unit. If required, extension cable RJ 12 may be used.

Technical specifications:
Monitored rated voltage:
48 V DC (12 – 60 Volt DC/12 – 25 Volt AC 50/60 Hz)
Connections:
3-pole connector, RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Temperature application range:
+5°C to +45°C

Protection category:
IP 40

Packs of	Model No. DK
1	**7320.620**

Active Power System Module PSM

New active plug-in module for the busbar system PSM. The module has 4 x IEC320 C13 sockets and an integral overload tripping device.

The following active functions are additionally achieved:

- 2-digit local LED 7-segment current display on the module. Legibility is independent from the installation position.
- Measuring and monitoring of the current per module. Min./max. limits may be set. Measurement range 0 – 16 A.
- Alarm indication via a flashing 7-segment display.
- Monitoring of the overload fuse.
- Modules may be combined via the bus system, thereby enabling sequential activation.
- In conjunction with the CMC-TC, the modules may be activated and deactivated via HTTP and SNMP. The 4 jacks are always activated and deactivated together. A special software is required for operating processing unit 7320.100 together with the active PSM (see www.cmc-tc.com). The 4 free channels of PU can be switched with up to 4 active PSM systems in each case. The active PSM does not require any separate powerpack in conjunction with PU.
- Remote administration of the power supply, editing and monitoring of remote limits, SNMP trap message in case of alarm.
- 4 IEC320 C13 sockets per module.

Version	Packs of	Model No. DK
Entire active module with quadruple fuse to IEC320	1	**7856.200**

Material:
Aluminium chassis with plastic cover

Supply includes:
1 module (max. 10 A per module),
10 A integral overload tripping device,
1 bus cable,
1 infeed cable 24 V DC,
1 adaptor for powerpack 24 V DC.

Also required:

A separate powerpack (100 – 240 V AC/24 V DC) is required for stand-alone operation without CMC-TC (7201.210) and the relevant connection cables, see page 745.

Note:
For more information on the power rail system, see page 744.

Internal security

CMC-TC socket strip

With integral
- Interference suppressor filter
- Overvoltage protection
- Alarm contact

In the event of interference caused by overvoltage, the connected active network components are protected. With the relay message contact, undervoltage and any malfunctions caused by overvoltage can be reported via the CMC-TC in the network (SNMP trap). A green lamp on the strip indicates that the device is operational. The second protective device is the interference suppressor filter which protects valuable equipment as a passive component.

Packs of	Model No. DK
1	**7200.630**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		■

Technical specifications:
Number of sockets: 9
Length of strip: 650 mm
Rated voltage:
230 V AC, 50/60 Hz
Rated current: 16 A
Relay alarm output: RJ 10 jack
Relay load capacity: 50 Volt DC 100 mA

Technical specifications, overvoltage protection:
Arrester application category: D
Surge current resistance per conductor: 2.5 kA
Maximum surge strength: 8 kA

Also required:

A digital input module and an RJ10 connection cable is needed to link the CMC socket strip to the CMC-TC system.
For selection aid, see page 770.

CMC-TC extension unit

The CMC-TC extension unit picks off three independently monitored mains voltages via network cables and forwards the measurements to the processing unit. It is linked to the PU via the RJ 45 connection cable on the P-I²C port (sep. accessory). Up to two extension units may be connected serially to one PU. A separate power pack is not required. Alarm limits may be preset for all voltages.

Max. number per PU	Packs of	Model No. DK
2	1	**7200.520**

To fit processing unit, see page 766.

Technical specifications:
Voltage inputs:
3 x 100 – 230 V AC, IEC connector
Interface: I²C, P-I²C,
max. cable length 2 m
Temperature application range:
+5°C to +45°C
Tolerance: ± 5 % at 20 – 30°C

Protection category:
IP 40

Also required:

For selection aid, see page 770.

Accessories:

RJ 45 connection cable, see page 772.

Vandalism sensor

The sensor contains a position-insensitive alarm contact and an ID so that it is automatically detected and set up by the CMC-TC system.
It is connected to the I/O sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used.
The sensitivity of the sensor may be set using the PU software.

Packs of	Model No. DK
1	**7320.540**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Technical specifications:
Mercury-free contact, position-insensitive
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides

Access sensor

The access sensors monitor doors, side panels or windows in the enclosure. The magnet is secured to the moving part (e.g. side panel), whilst the reed contact is fastened to the immobile part (enclosure frame).
The permanent magnet holds the reed contact in a closed position. When the door is opened or the side panel removed, the reed contact drops off and opens the circuit. This triggers an alarm in the CMC-TC.
The sensor contains an ID so that it is automatically detected and set up by the CMC-TC system. It is connected to a sensor unit via the connection cable supplied loose. Up to five access sensors may be connected in series to one monitoring line, if necessary in conjunction with extension cable RJ 12. The jumper plug forms the end.

Packs of	Model No. DK
2	**7320.530**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■	■	■

Technical specifications:
2 magnets
(mounted on the moving part, directly adjacent)
2 sensors with reed contact
(mounting on the enclosure frame)
Connection 1: RJ 12 jack, 6-pole
(connection to the sensor unit)
Connection 2: RJ 12 socket, 6-pole (series connection with other access sensors, or finished with the jumper plug)
2 jumper plugs RJ 12 at the end
2 connection cables: Length 2 m,
RJ 12 connector 6/6 on both sides

External security

CMC-TC motion detector

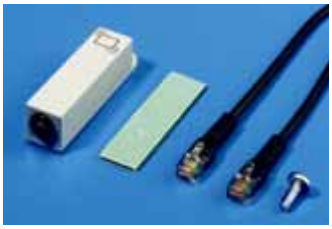
The motion detector may be used in enclosures or in rooms. Any modifications to the enclosure, such as opening a door or side panel, are indicated. The motion detector can also detect persons in the room or in front of the data cabinet.
The alarm contains an ID so that it is automatically detected and set up by the CMC-TC system. The power supply and data exchange to the sensor unit occurs via the connection cable, supplied loose. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	**7320.570**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		■

Technical specifications:
Alarm type: Infrared (IR) detector
Range: max. 7 m
Power consumption: max. 30 mA/24 V DC
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Dimensions:
W x H x D: 59 x 102 x 32 mm



Leakage sensor

The leakage sensor is equipped with an optical sensor head. If this sensor head becomes wet with moisture, it reports a leakage alarm. The sensor head may be mounted facing the floor. If water collects there and comes into contact with the sensor head, the alarm is triggered. The sensor contains an ID so that it is automatically detected and set up by the CMC-TC system. The connection cable, supplied loose, should be used for connection to the sensor unit. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	**7320.630**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Technical specifications:
Monitoring: Visual
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Temperature application range: +5°C to +45°C

Protection category:
IP 40

Analog sensor input module

The input module facilitates the connection of individual external analog sensors (4 – 20 mA) to the I/O sensor unit. As an adaptor, it performs the function of identification, so that an external sensor is automatically identified and set up by the CMC-TC system.
Sensors with 4 – 20 mA signal output and 24 V DC operating voltage (max. 50 mA) may be connected. The CMC-TC makes its internal power source available.
It is connected to a sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used.

Packs of	Model No. DK
1	**7320.520**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Technical specifications:
Analog input: 4 – 20 mA at 24 V DC
Maximum current output of the module: 50 mA
Sensors without GND may also be used.
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Sensor connection:
Pull-off clamping strip, 3-pole

Digital sensor input module

The input module facilitates the connection of individual external digital sensors to a sensor unit. As an adaptor, it performs the function of identification, so that an external sensor is automatically identified and set up by the CMC-TC system.
External sensors or detectors must have a floating contact (normally-closed or normally-open), because the module makes its internal voltage source available.
It is connected to a sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used.
In conjunction with the access unit, any given door release system (e.g. transponder) with a floating relay contact may be connected via the input module.

Packs of	Model No. DK
1	**7320.580**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■	■	■

Technical specifications:
Floating external sensor contact:
Voltage min. 24 V DC load capacity
Current: min. 10 mA load capacity
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Sensor connection:
Pull-off clamping strip, 3-pole

Relay output module

The output module allows individual, external extra-low voltage actuators to be switched via a change-over contact. As an intermediate relay, it performs the function of identification and isolation, so that an actuator is automatically identified and set up by the CMC-TC system.
It is connected to the I/O sensor unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used. At the output end, the module contains a pull-off terminal strip for assignment with actuator cables. Power supply to the actuator must be provided externally.
The output relay may be switched remotely via SNMP or HTTP. Alternatively, alarm links can also be created with alarm inputs.

Packs of	Model No. DK
1	**7320.590**

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

Technical specifications:
Condition of the actuator: cosPhi = 1
Max. load of the switch contact:
1 A, 30 V DC and 0.5 A, 48 V AC
Max. switching voltage: 48 V AC; 48 V DC
Max. switched current: 1 A
Max. switching load: 30 W, 62.5 VA
Min. switched current: 1 mA at 5 V DC
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Sensor connection:
Pull-off clamping strip, 3-pole

Individual security

Room door output module

The room door output module allows external door opener systems to be switched via a change-over contact. As an intermediate relay, it performs the function of identification and isolation, so that a door opener is automatically identified and set up by the CMC-TC system.
It is connected to the access unit via the connection cable supplied loose. If required, extension cable RJ 12 may be used. At the output end, the module contains a pull-off terminal strip for assignment with actuator cables. Power supply to the door opener must be provided externally.

Packs of	Model No. DK

1 A, 30 V DC and 0.5 A, 48 V AC
Max. switching voltage: 48 V AC; 48 V DC
Max. switched current: 1 A
Max. switching load: 30 W; 62.5 VA
Min. switched current: 1 mA at 5 V DC
Connection: RJ 12 jack, 6-pole
Connection cable: Length 2 m,
RJ 12 connector 6/6 on both sides
Sensor connection:
Pull-off clamping strip, 3-pole

Note:
One access sensor 7320.530 is always needed for each output module.

CMC-TC alarm signal lamp

The alarm signal lamp serves as a collective fault signal for all alarms in the CMC-TC.
Example: Temperature exceeded, fan defect, smoke alarm etc. The CMC-TC provides a user-friendly menu allowing the operator to select which message will affect the CMC-TC alarm relay.
The alarm signal lamp is activated via the alarm relay.
The lamp may be attached to the network enclosure or any other desired position, e.g. in the corridor.
The RJ 12 connection cable is required for connection to the PU.

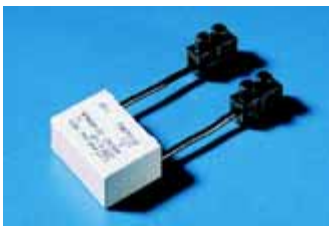
Item	Model No. SZ
LED steady light component 24 V DC, red	**2372.000**
Connection component	**2368.010**

To fit processing unit, see page 766.

Technical specifications:
Rated operating voltage: 24 V DC
Rated current: 60 mA

Also required:

For selection aid, see page 770.



Interference suppression capacitors

for fans

The capacitors are used for the interference suppression of fans with self-starting shaded pole motors. One capacitor should be connected directly parallel to the mains voltage for each fan unit. The capacitors are equipped with a terminal, which means that they are easily fitted to the fan cable.

Comfort handle for TS 8 unit with master key function

The handle assumes the function of a door lock and lever handle monitoring.
The TS 8 handle 7320.721 includes the master key function. This means that the handle can always be opened with the master key, independently of the control system. A semi-cylinder is supplied loose, but a semi-cylinder 40 or 45 mm overall length to DIN 18 254 may also be used.
An access sensor (DK 7320.530) must be connected to the corresponding door for each handle.
If the lever handle is closed, the locking mechanism integrated into the handle latches automatically. The handle may be released via the CMC-TC system in the network or via optional add-on systems, such as smartcard readers etc. The handle is locked in a de-energised manner (without electrical connection). The push-button may be depressed following electrical release and then opens the lever automatically. The opening process must be completed within 15 seconds. Opening via the key is always superordinate, i.e. the enclosure may always be opened with the key in the case of electrical locking and in the event of a power failure (emergency opening).

Handle system	**Model No. DK**

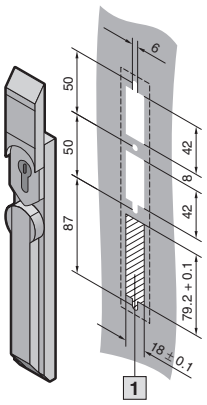
Connection cable:
Length 2 m, RJ 12/RJ 12 connector
Coupling for extension:
RJ 12/RJ 12 jack
Temperature application range:
+5°C to +40°C

Protection category:
IP 40

Also required:

For selection aid, see page 770.



Handle systems with electromagnetic lock

The lock unit consists of a Rittal handle system whose handle is electromagnetically locked. It contains an identifier so that it is automatically detected and set up by the CMC-TC system. The power supply and data exchange to the access unit occurs via the attached connection cable. An access sensor (DK 7320.530) is always required for door monitoring. With the door closed and the clip-down handle locked home, latching is activated by switching on the lock magnet. The CMC-TC enables the handle to be pulled out by deactivating the lock magnet, thereby allowing the door to be opened. This deactivation can be initiated via an access unit such as a smartcard reader, magnetic card reader, coded lock and/or network management systems. The handle system likewise contains handle monitoring. The CMC-TC reports an alarm if the handle is not swung in and locked home after closing the door.
The push-button insert supplied can also be exchanged for **lock inserts.**

Note:
When using the Ergoform-S handle, an additional hole is required.

1 Additional hole for electronic lock (PS/FR/QR/VR/TC/TE)

Handle system	**Model No. DK**
Ergoform-S handle for FR, PS, TC, VR, TE	**7320.700**
Ergoform-S handle for QR	**7320.710**

To fit sensor unit:

I/O unit	Access unit	Climate unit
	■	

Note:
For PS and FR glazed doors, the locking bars listed below are required:

Locking bars

Version	**Model No. DK**
Lower door locking bar for 2000 mm high PS enclosures	**7200.371**
Lower door locking bar for 2000 mm high FR enclosures	**7200.372**
Lower door locking bar for TE enclosures	**on request**

Other sizes available on request.

Technical specifications:
Rated voltage: 24 V DC
Rated current: max. 100 mA
Connection cable: Length 3 m, RJ 12 connector
Connection cable:
Length 2 m, RJ 12/RJ 12 connector
Coupling for extension:
RJ 12/RJ 12 jack
Temperature application range:
+5°C to +40°C

Protection category:
IP 40

Also required:

For selection aid, see page 770.

Smartcard reader/ magnetic card reader/ coded lock

The door handle is released to authorised persons who have identified themselves with a smartcard/magnetic card/combination code. Smartcard readers/magnetic readers/coded locks are installed above the enclosure handle and can also function as a central unit for releasing several doors.
The entire access procedure can also be registered with the CMC-TC where there is network connection.

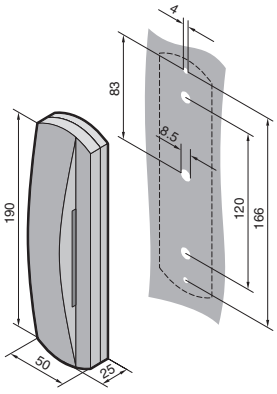
Technical specifications:
Rated voltage: 24 V DC
Rated current: max. 20 mA
Interface: I^2C bus
Smartcard type: I^2C chip
Magnetic card type:
Magnetic strip card with data on track 2.
The read system is designed for cards with both a high and a low level of magnetism.

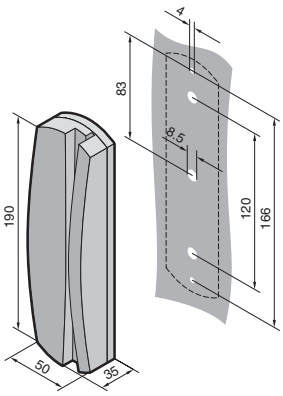
Read system	Model No. DK
Smart card reader	**7320.750**
Magnetic card reader	**7320.760**
Coded lock	**7320.770**

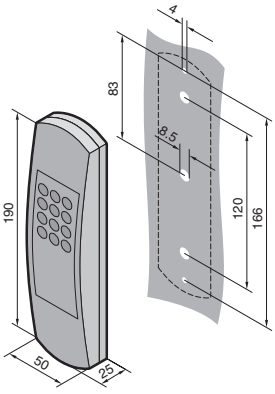
To fit sensor unit:

I/O unit	Access unit	Climate unit
	■	

Note:
Smartcard readers/magnetic card readers/coded locks may only be used in conjunction with the CMC-TC and an electric lock. 3 cards are supplied with the smartcard reader/magnetic card reader. Each card contains a four-digit code, which is different on all three cards. All cards are access-authorised. The code may be input directly on the coded lock.
Authorised codes may be set in the CMC-TC via WEB. The input code is transmitted to the CMC-TC and, where applicable, to the network management system, via the I^2C bus. A mounting adaptor for a TS aluminium glazed door is supplied loose with every reader.







More lock systems

can be found under system accessories from page 881 on.

Adaptor for reader units

The adaptors are used to install the reader units. They are screw-fastened between the design section of the door frame and the reader unit. No adaptor is required for shallow mounting levels. For TS aluminium glazed doors, an adaptor is supplied loose with every reader unit. One adaptor is required for each reader unit.

Type PC: For PC glazed doors
Type VR: For VR glazed doors and VR sheet steel doors
Type PS: For PS aluminium glazed door

Access door panels

for FR(i)

The access door panels contain an electromagnetic lock with a security lock. They may be exchanged for the existing trim panel of the FR(i) door. The door panel is easily linked to the CMC-TC monitoring system, allowing the FR(i) door to be remotely opened and monitored via the network. If a door trim panel variant with read system is selected, door release may also be implemented via the CMC-TC using the respective medium (smartcard, magnetic card or numerical code pad).
The standard door panels of FR(i) doors are easily exchanged for access door panels.

Jacks are provided for connection to the CMC-TC. This ensures plug & play exchange. The system may be connected to access unit 7320.220.
To operate the system, an access sensor (DK 7320.530) is additionally required. For the door panels with card reader systems, 3 cards are included with the supply.

Technical specifications:
Rated voltage: 24 V DC
Interface: I^2C
Smartcard type: I^2C chip
Magnetic card type:
Magnetic strip card with data on track 2.
The read system is designed for cards with both a high and a low level of magnetism.

Access door panels to exchange for standard trim panels in FR(i) doors

FR(i)	2000	■	Coded lock	**7320.930**

■ Comfort handle TS 8 with master key function 7320.721 (see page 781) for the CMC-TC monitoring system is installed. All other height variants (FR(i) enclosure height 600, 1200, 1800 and 2200 mm) are available on request.

To fit sensor unit:

I/O unit	Access unit	Climate unit
	■	

Universal lock unit

The security lock consists of a base unit and a lock counterpart. The base unit is attached to the enclosure frame. The lock counterpart is attached to the door.
A mechanical setting allows you to choose between two states: at zero current when open, or at zero current when closed.
In order to identify the operating mode used, one of the two identifier modules (supplied loose) should be used, so that it is automatically identified and set up by the CMC-TC system. Power supply and data exchange is via the access unit, using the identifier modules and connection cables supplied loose. If required, extension cable RJ 12 may be used.
An access sensor (DK 7320.530) is always required for door monitoring.

Technical specifications:
Rated voltage: 24 V DC
Rated current: 140 mA
Temperature application range:
+10°C to +40°C

Supply includes:
1 base unit with connection cable 0.1 m, RJ 12 connector
1 lock counterpart
2 identifier modules with RJ 12 jack, 6-pole (connection to access unit),
RJ 12 jack, 6-pole (connection to universal lock),
1 connection cable for identifier modules,
2 m, RJ 12/RJ 12 connector without mounting kit.

Packs of	**Model No. DK**

[1)] Attachment in 600 mm wide FR enclosures is only possible with recessed mounting of the 482.6 mm (19″) or metric attachment levels.

Note:
Attachment kits for the various different enclosure types and enclosure doors can be taken from the table.

Also required:

For selection aid, see page 770.

Note!
The handle only fits into the cut-out shown in the drawing. For other hole patterns, additional adaptors are needed, and/or machining of the door. Solutions provided on request.

Handle system for universal installation

with electromagnetic lock for the CMC-TC monitoring system

The universal handle is equipped with a pitch pattern of mounting holes which will fit many existing door systems. This handle is ideal for retrofitting to projects with varying enclosure types and variants.
The new handle may be connected to the CMC-TC system via plug & play.
Additionally, an access sensor (DK 7320.530) must always be used to enable polling of the door status. The handle is equipped with a connection cable and an RJ 12 connector, which may be plugged into the access unit 7320.220 of the CMC-TC system. The handle is equipped with a push-button insert which may be depressed when the electromagnetic lock is released.

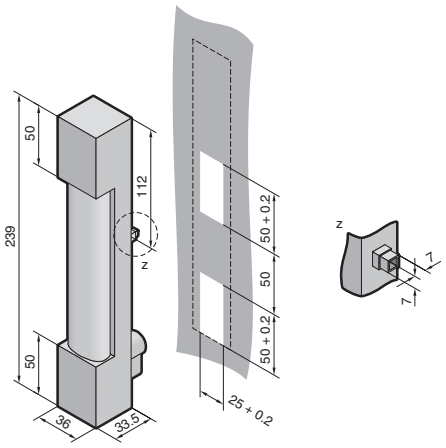
Technical specifications:
Rated voltage: 24 V DC
Rated current: max. 100 mA
Connection cable: Length 5 m, RJ 12 connector

	Type	Model No. DK
electro-magnetic handle	CMC-TC	**7320.950**

Extended delivery times.

To fit sensor unit:

I/O unit	Access unit	Climate unit
	■	



TS 8 transponder handle

with integral transponder release system from Simons & Voss

The electromagnetic TS 8 transponder handle may be retrofitted in the doors of TS 8 enclosures. The handle is equipped with an integral radio transponder. The transponder receiver with battery is integrated into the handle housing. Apart from the transponder transmitter, no additional accessories, such as additional electronics, cables, power pack etc., are required. The handle is easily exchanged without the need for wiring.
If battery servicing is required, this is indicated acoustically.
The handle is supplied in the zero state, so that it may be opened with any transponder transmitter.

Use with hand-held transmitter:
The transponder transmitter is actuated from the handle, as a result of which the latter is unlatched for a specified time window and may be opened by pressing the push-button.

Use with the CMC-TC transmitter:
The transponder transmitter is linked to the CMC-TC system via the room door output 7320.740 and the access unit. The transmitter is placed in the enclosure frame, near the handle. In this way, the door may be released via the CMC-TC system. Additionally, an access sensor (DK 7320.530) should always be used to enable polling of the door status.

Use of the programmable transponder:
The programmable transponder allows the individual transponder transmitters to be allocated to individual handles. Matrix programming is supported.

	Type	Model No. DK
Electromagnetic handle	Transponder, stand-alone application	**7320.960**
Transponder transmitter	Hand-held transmitter	**7320.961**
Transponder transmitter	CMC-TC transmitter	**7320.962**
Programmable transponder	programming	**7320.963**

Extended delivery times.

Benefits:
- No cables on the handle, because the electronics and battery are integrated into the handle.
- Several users may be set for one handle.
- Plug & play installation both mechanical and electrical.
- Individual control of the transponders and the set-up of each transponder is possible for up to 3 locking systems.
- With additional overlay to automatically block the old transponder in the event of reprogramming.
- Counterfeit-proof data communication is achieved via radio using crypto-codes.
- The “challenge response procedure” ensures protection against surveillance.
- The standard interface means that connections to other access and monitoring systems are not a problem.

The lock and organisation sytem is graded in the highest category with respect to unlocking protection to BSI 7500.

Systems with extra electronics and access control from Simons & Voss available on request.

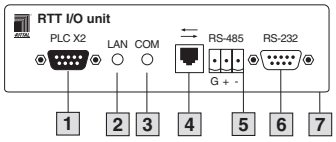
Monitoring of climate control units

Benefits:

- All data for the climate control units via the WEB browser.
- Setpoints may be set via WEB, SNMP, Telnet, RS232.
- Automatic alarm messages in the network via SNMP.
- SMS text messages via GSM (optional).

The “Monitoring of climate control units” set provides all the modules required for monitoring Rittal TopTherm cooling units with comfort control. Temperatures, messages, alarms etc. may be displayed directly on the Web interface in the intranet or Internet. Trap alarms are sent automatically to incorporate SNMP network management systems. SMS text messages are optionally possible via the Rittal GSM module.

Extensions/configuration:
The processing unit PU has 4 channels for 4 interface cards climate control unit RTT I/O unit. An RTT-I/O unit is supplied with the set. Three RTT-I/O may optionally be added. Each RTT-I/O unit is capable of monitoring one master TopTherm cooling unit, each with 9 slave climate control units. The set allows you to monitor up to 10 cooling units, and with extensions up to a maximum of 40 cooling units.
The I/O unit and climate unit may also be connected instead of the interface card. This facilitates additional monitoring of smoke, humidity, air flow etc.



1 **PLC X2** Optocoupler alarm Outputs for SPS

2 **LAN LED** Internal communication

- EEPROM defect

Supply includes:
Processing unit PU with firmware/software for applications with climate control units,
interface card, climate control unit RTT-I/O unit (SK 3124.200)
power pack 24 V DC, input 100 – 240 V AC (DK 7320.425),
connection cable D with IEC320 connector (DK 7200.210),
Cat5 connection cable, 2 m,
for connecting the RTT-I/O unit to the processing unit PU,
data cable RS232, 2 m, for connecting the RTT-I/O unit to the RTT climate control unit with comfort control.

Speed monitored/controlled fan system

Benefits:
- Excellent air throughput at a high operating ratio.
- Monitoring of fan speed.
- Plug and play compatibility system.
- Easily installed in Rittal fan roofs.
- Long service life.
- Noise minimisation/speed control.
- Alarm message via the CMC-TC in the network optionally possible.
- Open supply system 24/48 V DC/100 – 230 V AC.
- EMC compatibility via DC fan systems.

Fan Control System FCS

Speed-monitored fan system

The Fan Control System regulates and controls the speed of up to 6 fans 7320.812, 24 V DC. This helps to save energy and reduce the noise level of the fans, as well as extending the service life of the fans. The failure of one or more fans is detected and notified in the form of a collective fault signal via LED display, beeper and integral alarm relay (floating change-over contact). Control is temperature-based using an external temperature sensor 7320.500. The temperature setpoint is set via a switch on the front. The system may also optionally be set and monitored via the network (Web/SNMP). It is connected directly to the CMC-TC (processing unit) 7320.100.

FCS	To fit processing unit	Model No. DK
Without fan	■	**7320.810**

Functions:
- Speed-regulated speed control.
- Fan speed monitoring.
- Optional connection via Web/SNMP.
- Redundant fan control; the air throughput of all fans is automatically increased in the event of a system failure.
- Plug & play installation via RJ 12 connector system.
- 482.6 mm (19″) mounting is possible via 7320.440.

Note:
Supplied pre-configured on request:
The FCS system may be fitted in all Rittal fan roofs.

FCS fitted in fan roof,

1 **Supply with 24 V/48 V DC** via
- Supply connection cable direct 7320.813
- CMC 24 V power pack 100 – 230 V AC (input) 7320.425
- CMC 24 V power pack 48 V DC (input) 7320.435
  For operation with 48 V DC, fans with 48 V DC must be used.

2 **RJ 45 jack** for connecting to the processing unit 7320.100 (optional) (Cat5 cable)

3 **CMC-TC temperature sensor** 7320.500

4 **Alarm relay output**
24/48 V DC, 1 A (floating change-over contact)

5 **Fan with speed monitoring**
7320.812 (24V DC). 48 V DC fans may optionally be used.

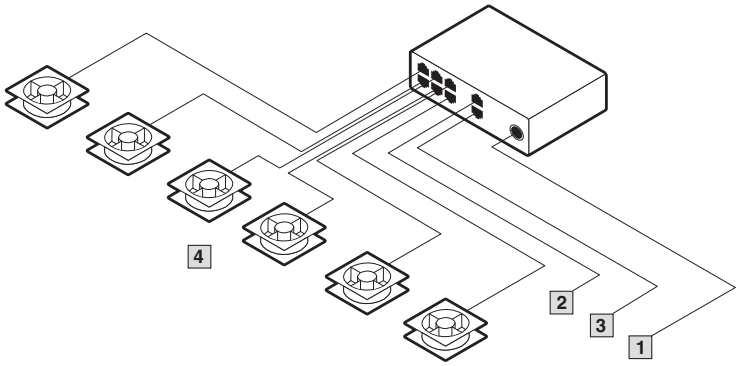
Fan Alarm System FAS

Speed-controlled fan system

The Fan Alarm System monitors the speed of up to 6 fans 7320.812, 24 V DC. The failure of one or more fans is detected and notified in the form of a collective fault signal via LED display, beeper and integral alarm relay (floating change-over contact). The system is designed as a plug & play system. The system may also be optionally monitored via the network (Web/SNMP). It is connected directly to the CMC-TC (the I/O unit) 7320.210.

Functions:

- Fan speed monitoring.
- Optional connection via Web/SNMP.
- Plug & play installation via RJ 12 connector system.
- 482.6 mm (19″) mounting is possible via 7320.440.



FAS	Model No. DK
Without fan	7320.811

To fit sensor unit:

I/O unit	Access unit	Climate unit
■		

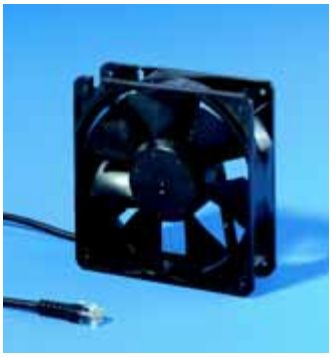
Note:
Supplied pre-configured on request:
The FAS system may be supplied fitted in all Rittal fan roofs.

1 **Supply with 24 V/48 V DC** via
- Supply connection cable direct 7320.813
- CMC 24 V power pack 100 – 230 V AC (input) 7320.425
- CMC 24 V power pack 48 V DC (input) 7320.435
  For operation with 48 V DC, fans with 48 V DC must be used.

2 **RJ 12 jack** for connecting to the I/O unit 7320.210 (optional)

3 **Alarm relay output** 48 V DC, 1 A (floating change-over contact)

4 **Fan with speed monitoring** 7320.812 (24 V DC). 48 V DC fans may optionally be used.



Fan 24 V DC

with speed monitoring

Fan with integral speed monitoring with RJ 12 connector/connection cable 0.6 m for connecting to FCS 7320.810 and FAS 7320.811.

Technical specifications:
Rated voltage: 24 V DC
Rated current: 0.28 A (max.)
Rated output: 6.72 W (max.)
Air throughput (unimpeded air flow): 165 m^3/h
Speed: 2650 rpm
Noise level: 41 dB (A)

Packs of	Model No. DK
2	7320.812

Note:
Fan variant with 48 V DC available on request.

RJ 12 extension

for 24 V DC fan, 1 m

The DC fans DK 7320.812 are equipped with a 0.6 m connection cable. If this length is not sufficient to connect to the FCS or FAS, the cable may be extended by 1 m using the RJ 12 coupling included in the set.

Technical specifications:
Coupling: RJ 12 jacks 6/6 at both ends
Connection cable: Length 1 m,
RJ 12 connector 6/6 on both sides
Temperature application range: +5°C to +45°C

Fan extension	Packs of	Model No. DK
1 m	2	7320.814

Supply connection cable

for FCS/FAS

If the customer has access to 24 V or 48 V DC, the FCS/FAS systems may be supplied with power (max. 48 V DC) via the supply connection cable. No power packs are then required for the application.
Length: 2 m

Packs of	Model No. DK
1	7320.813

Software

Network management systems

By using SNMP network management systems (NMS) such as HP Open View or Novell Manage Wise, it is possible to incorporate and address the CMC-TC system via SNMP. The required MIB is included with the supply.
The MIB is easily incorporated by simply copying. Standard MIB-II (RFC 1213) is also supported. It is included with the supply of the NMS. The private MIB contains all the required system variables, and is easily linked to the functions of the software HP Open View, Novell Manage Wise etc.

Note:
The MIB is also available from the Internet at
www.rittal.com, www.cmc-tc.com
as a download, and is included with the supply of every CMC-TC system.

Management system Aprisma Spectrum Enterprise Manager

The graphical user interface for the Spectrum Enterprise Manager covers every conceivable requirement. The MIB variables are arranged on the interface in a user-friendly configuration. This professional software package combines the highlights of the CMC-TC monitoring system with the Aprisma product.
The management module for Rittal CMC-TC, developed by DICOS, facilitates the integration of all information sent out by the CMC-TC agent into the Spectrum management platform. It also supports configuration of the threshold values being monitored. The SpectroServer receives all the information from the CMC-TC and provides users with an opportunity to visualise, control and configure Rittal racks direclty via the central Spectrum console. Integration into the enterprise management system supports central processing of alarms, so that these may be forwarded, e.g. via a voice mail system, or used as the basis for the automatic generation of a trouble ticket.

Note:
Further information can be found on the Internet at:
www.dicos.de
or by sending an order by e-mail to
sales@dicos.de

CMC-TC configurator

The CMC-TC configurator automatically compiles all the modules and accessories required for a CMC project. The user simply enters the monitoring requirements and the ambient conditions. The result is a list containing all the item numbers required for the project. In this way a project can be compiled quickly and effectively. This software requires MS Excel, Version 97 or above.

Note:
The CMC-TC configurator is available on the Internet at
www.rittal.com, www.cmc-tc.com
and may be downloaded free of charge.

CMC-TC Manager

The new CMC-TC Manager allows all Rittal SNMP agents to be managed in a single software package.

- CMC II (7200.100)
- PCU Web sockets (7200.000)
- CMC-TC processing unit (7320.100)

The graphical interface reproduces information from the system and offers the opportunity of configuring systems via SNMP.
Only the Java Runtime Environment JRE 1.3 (or higher version) must be installed on the relevant PC system. Java may be downloaded from the Internet at **www.sun.com**.
The various products (PCU, CMC II, CMC-TC) may be sorted on the basis of type or location. All important alarm messages enter the built-in trap receiver, and can be recorded with the logging function. The alarm messages can be forwarded directly using the e-mail function. The search function is used to distinguish and automatically list the SNMP agents.

Benefits:

- Open to operating systems via Java (Windows/ Linux).
- Graphical information and operator interface for:
  – CMC II
  – Web socket strip PCU
  – CMC-TC/processing unit
- Full integration of the management information base (MIB) of Rittal systems.
- Trap receiver with logging function.
- E-mails sent in the event of trap alarm messages.
- User-oriented system listing according to locations.

Note:
The software is available free of charge from the Internet.
www.rittal.com, www.cmc-tc.com

Plug-in for HP Open View

Thanks to its integration into HP Open View NNM, StableNet™ CMC-TC is centrally and permanently available. The management functions of HP Open View have been extended to optimum effect: NNM monitors the traps occurring in CMC-TCs and forwards them to StableNet™ CMC-TC. The MIB of processing unit 7320.100 of the CMC-TC system has been incorporated.

Functions:

- Integral trap manager
- Various alarm functions, e.g. e-mail, SMS etc.
- Integral MIB browser (cf. illustration)
- Graphical display of the monitored values with diagrams and tables
- Individual representation and organisation of the monitoring tools
- Pre-configured graphical interface for the CMC-TC
- Microsoft® Outlook® “look and feel”
- Non-platform-dependent (JAVA).

Other products from the StableNet™ suite with the option of integrating the StableNet™ CMC-TC manager:

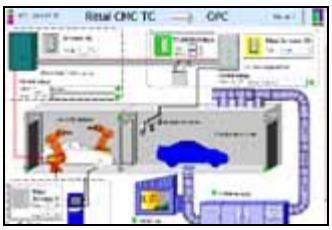
StableNet™ ARC
Advanced Router Configuration

- Management of all network components and CMC-TCs from within HP Open View NNM
- Efficient management of routers and switches

StableNet™ PME
Performance Management Engine

- Evaluation of the data obtained with StableNet™ CMC-TCs by means of comprehensive reporting functions
- Diverse opportunities for measuring network performance

Note:
Further information can be found on the Internet at:
www.infosim.net
or by sending an e-mail enquiry to
info@infosim.net



SNMP-OPC Server

The OPC Server allows all variables in the CMC-TC (MIB) to be integrated into control desk interfaces. Be it industrial automation technology or building automation, with OEL Process Control (OPC) “OEL: Object linking and Embedding” you get the ideal interface between your control desk software and the CMC-TC system.
Software available on request.
www.cmc-tc.com

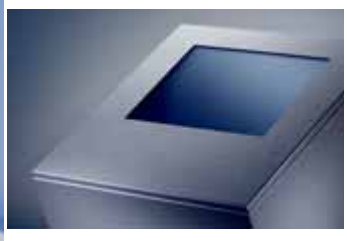
Note:
Further information can be found on the Internet at:
www.obermeier-software.de
or by sending an e-mail enquiry to
info@obermeier-software

Kiosks

Information and service anytime, anywhere

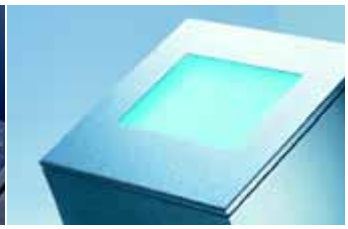
New markets, new application areas, new opportunities! Kiosks are on hand 24 – 7 to provide up-to-the-minute information, attract interest, and receive requests, messages, reservations and orders. Sports, arts, entertainment, administration, transport, industry, trade and hotels – suitable applications are everywhere! Located directly at the point where they are needed, offering a high standard of quality and elegant design, kiosks represent valuable “partners” for information and business.

Arc-Line II



User-friendly TFT touchscreen display or . . .

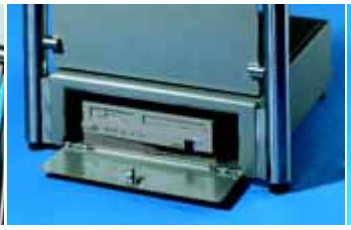
. . . perfectly integrated into a keyboard recess.



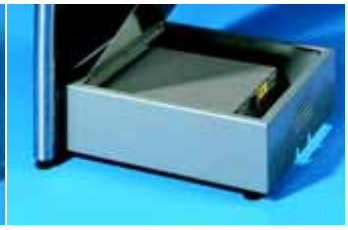
Which design do you prefer? Spray-finished sheet steel or stainless steel?

Opti-Line II

Keyboard: A new design in a smart aluminium cover.



Small door, optimise operation of the built-in PC-technology.



Large lid, easy to service and readily customised.

Opti-Desk

Various keyboard variants may be integrated, e.g. in stainless steel.

Design line A:
The worktop and base plate are harmoniously curved inwards.

Design line B:
The worktop and base plate are curved outwards, adding a dynamic touch.

Information and service anytime, anywhere

Opti-Wall

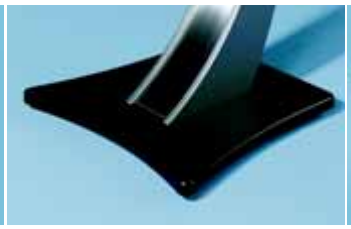
The optional electronic height adjustment also makes it easy for children and wheelchair users to access the multimedia world.

The speakers are protected by integration into the kiosk.

Compact, low-noise PC technology: The connections are easily accessible.

Alpha-Line

Powerful: The kiosk PC-systems Silent and Pro.
The door makes servicing work easy.



For stability coupled with striking elegance.

Simplicity to inspire you: Alpha-Line keyboard.

Out-Line Wall

The transparent trim panel and rain canopy ensure optimum operation.

Optionally integrated speakers are situated on the lower side, without affecting the protection category.

High-quality materials such as aluminium and stainless steel facilitate semi-outdoor use.

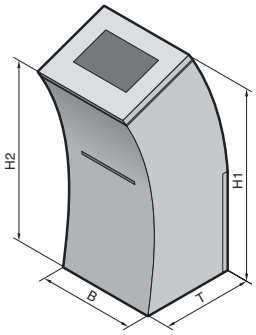
Out-Line Pro

The base/plinth is attached to the ground for stability.

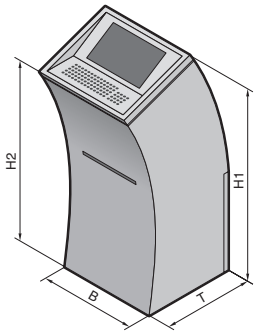
Protection against vandalism also extends to the robust stainless steel keyboard with trackball.

A high protection category of IP 55 is achieved, thanks to a sealing frame and lock system.

Arc-Line II



Touch



Keyboard

B = Width
T = Depth

Modern communications and technology with a new look. The Arc-Line now with TFT technology and with significantly more space for the installation of additional hardware. Thanks to the modified dimensions, the familiar kiosk standard keyboards may be installed in the lid.

Components with 482.6 m (19″) mounting dimensions may be integrated in the interior. All Arc-Line Classic models now have a protection category of IP 55. Additional installation of a sound system is possible, subject to compliance with the protection category.

Material:
Basic:
Sheet steel, spray-finished
Classic:
Stainless steel, brushed

Colour:
Basic:
RAL 9007

Protection category:
Classic:
IP 55

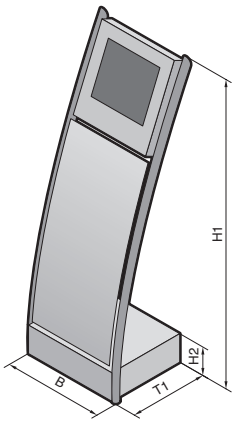
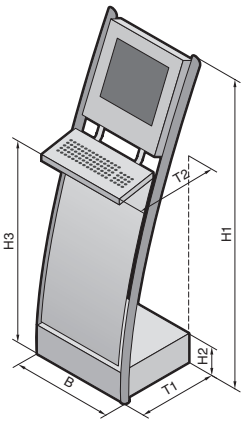
Opti-Line II





B = Width
T = Depth

The Opti-Line II creates fresh visions with a tactile appeal. Stainless steel and aluminium, simplicity and elegance, function and aesthetics – these are all timeless attributes for successful communication. This is stylish packaging at its most attractive. A keyboard support with new lines, more modularity and a consistent design. A successful innovation from the legendary Opti-Line generation.

This is a modular system that meets all requirements, combining a flexible range of choices for keyboard variants and PC systems, depending on the intended application.

Material:
Display enclosure:
Sheet steel/plastic, grey aluminium (RAL 9007), spray-finished, smooth
Pedestal tubes:
Stainless steel V2A, brushed
PC case:
Sheet steel, grey aluminium (RAL 9007), spray-finished
Keyboard support:
Aluminium.

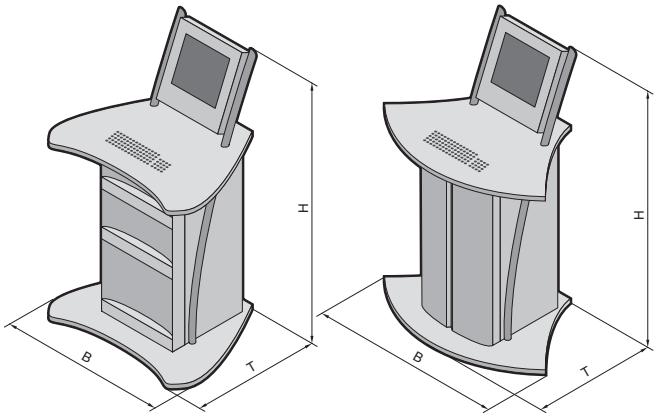
Opti-Desk



B = Width
T = Depth

The Opti-Desk is designed as a stylish free-standing PC workstation for the office environment and for use in the administrative sector.
The generous worktop offers plenty of work space, and its successful design blends harmoniously into any environment where effective advice, information and presentations are needed.

The PC hardware is housed in the lockable lower cupboard, where other equipment such as printers, scanners etc. may also be integrated on additional built-in component shelves. Several workstations may be bayed or sited in groups via optional worktops.

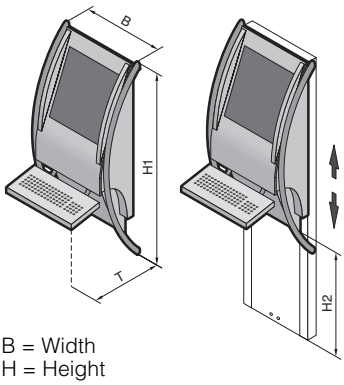
Opti-Wall



B = Width
H = Height

This new compact kiosk for wall mounting was developed on the basis of the successful Opti-Line design. This wall-mounted kiosk system, designed for representative indoor applications, is sure to impress, not only with its refined design, but with the benefits of internal space utilisation. Despite the minimal dimensions of this kiosk, there are a range of different configuration variants available. You decide which TFT, PC or keyboard you require for your specific application.
There is a choice of two PC systems, specifically tailored to the intended application in terminal systems. In order to make it easier for children and wheelchair users to use a multimedia kiosk, the accessories for the Opti-Wall include an electric height adjuster which may be adjusted to the user's requirements via controls.

Material:
Sheet steel, spray-finished
Stainless steel

Colour:
RAL 9007 (display enclosure)
RAL 9006 (basic enclosure)

Property rights:
German registered design no. 403 02 344

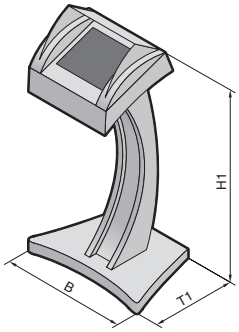
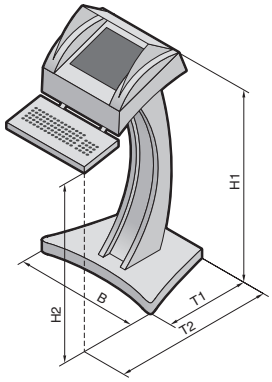
Alpha-Line





B = Width
T = Depth

The kiosk for tomorrow's world. Here, communication becomes an experience. Two ambitious objectives are united in a single kiosk: The traditional and the mundane have given way to lightness and design. Rounded shapes add rhythm and style, ensuring a powerful impact from any perspective. Eye-catching and out-of-the-ordinary. Simply unusual.

Suitable for the installation of compact and powerful PC systems (Silent and Pro) as well as your choice of keyboard. Navigate your way into the future with a touchscreen or keyboard.

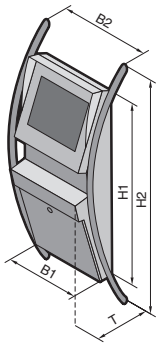
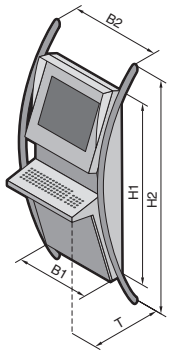
Out-Line Wall





B = Width
T = Depth

The new Out-Line Wall is a further development of the Opti-Wall kiosk for the semi-outdoor sector (+5 to +40°C). Despite the minimal dimensions of this kiosk, there are a range of different configuration variants available.

Options include, an outdoor-compatible sound system with protection category IP 55. Climate control kits, consisting of a heater and fan-and-filter units, are also available. In addition to the accessories listed here, other variants are also possible, together with various colour variants as customer-specific complete systems.

Colour:
RAL 9007

Various spray-finishes, including anti-grafitti spray finish, available on request.

Protection category:
IP 55

Specifications and the online configurator

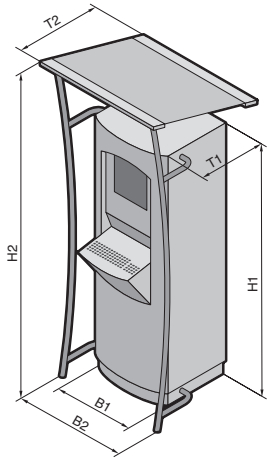
Out-Line Pro



B = Width
T = Depth

This outdoor kiosk is designed for multimedia in an outdoor setting.
Based on Rittal's expertise in the outdoor sector, this twin-walled aluminium kiosk offers a high level of security in terms of protection from a wide variety of climatic and physical conditions, including protection against vandalism.

Internally, the enclosure may be configured with other components from the Rittal range of accessories, such as component shelves etc. Special displays suitable for outdoor use with high levels of light intensity are used in complete systems.

Material:
Aluminium, spray-finished
Tubes: Stainless steel

Colour:

PC systems

Kiosks Mini-PC system
Rittal now offers innovative PC technology to match the kiosk systems which is specifically tailored to the requirements of the kiosk sector. There is a choice of three PC systems which are ideally suited for use in all terminal systems in terms of noise emission, system performance and compact design.

With the PC system “Silent”, the designers focussed their attention on a noise- and heat loss-reducing design. In this way, we have managed to dispense with the use of active fans for the power pack and for cooling the PCU.

Mini-PC configuration[1]		Silent	Pro II	Basic[4]
Fanless PC (Mini-ITX, VIA Eden CPU), 633 MHz		■	–	–

Keyboards

Long-stroke keyboard

with trackball
Super-slimline, compact long-stroke keyboard (83/84 keys) with top-quality 16 mm trackball. Available in two different colours and several country layouts.

For independent installation into the keyboard supports or keyboard recesses, an adaptor plate is additionally required.

Mechanical specifications:
Key buttons in an 18 mm pitch pattern
Trackball Ø 16 mm
Weight: 720 g
Storage temperature: –20°C to +60°C
Operating temperature: 0°C to +50°C
Dimensions W x H x D:
370 x 138.5 x 20 mm.

Electrical specifications:
Connections: PS/2 for keyboard and trackball
Operating voltage: 5 V DC type 18 mA

USB version available on request.

Material:
Plastic

Adaptor plate in brushed stainless steel	**9003.160**
Adaptor plate, sheet steel, RAL 9005 (black)	**9003.170**

Stainless steel keyboard

with trackball
The stainless-steel full-stroke keys (86 keys) with a stroke of 3.5 mm are laser-engraved and protected against being twisted out or snapped off. The keyboard conforms to CE requirements.

Mechanical specifications:
Actuator travel: 3.5 mm
Actuator force: 0.56 N, tactile
Service life: > 10 million actuations
Storage temperature: –40°C to +70°C
Operating temperature: –20°C to +60°C
Dimensions W x H x D:
432 x 155 x 34 mm (R = 10 mm).

Electrical specifications:
Connections: PS/2 for keyboard and trackball
Operating voltage: 5 V DC, max. 50 mA

USB version available on request.

Protection category:
Keyboard and trackball
IP 65 (idle)
IP 54 (in motion)

Service keyboard

with trackball

Compact keyboard with intgral trackball for mobile on-site service use with kiosk systems. This keyboard makes maintenance work and software installation easier for kiosk systems with a touchscreen which do not have their own keyboard. This keyboard is not essential for operation of the terminals, but in many terminals it may remain inside the enclosure, thanks to the minimal dimensions. This keyboard additionally has 18 multimedia keys.

Mechanical specifications:
Actuator travel: 2.2 mm
Trackball: Ø 19 mm
Service life: 1 million actuations
Operating temperature: 0°C to +50°C
Dimensions W x H x D:
316 x 152 x 21 mm.

Electrical specifications:
Connections: PS/2 for keyboard and trackball

USB version available on request.

Protection category:
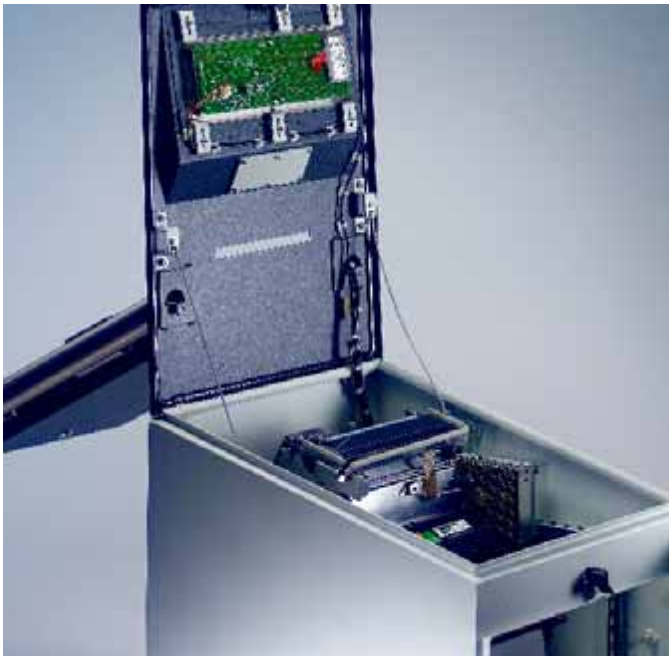
IP 65

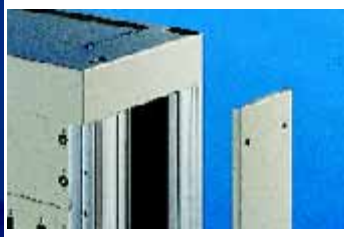


Example of a customer-specific terminal solution with 4000-page thermo-printer.

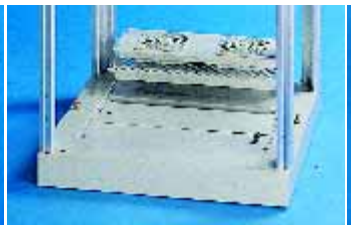
Features

Modern telecommunications continuously place new demands on racks and enclosures. Above all, maximum flexibility is crucial to conform with the various standards. Combined with creative scope, you get cost-effective solutions for your individual requirements.

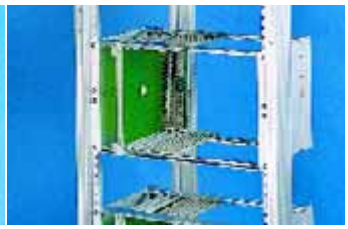
TC rack



Rear/side panel
to finish off a complete enclosure unit.



Roof and base/plinth insert
The inserts may be fitted as required in the roof or base/plinth.

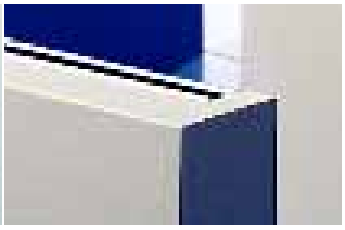


Option of installing all standard **482.6 mm (19″) or metric (535 mm) components.**

Small FM distributors

FM universal mounting brackets for LSA-Plus, VS-Standard and other common connection systems.

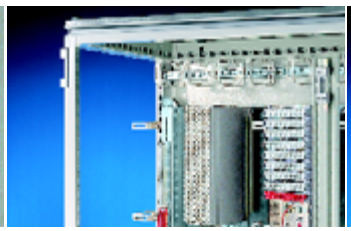
Prepared for mounting **LSA cable retainers** or routing troughs.



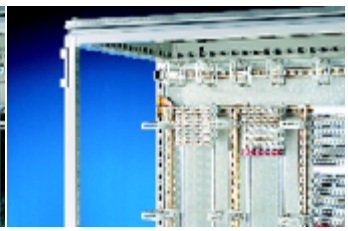
Cable entry
top and bottom. With 2 comb strips for cable clamping.

Modular FM distribution enclosures

Wall-mounted and bayed enclosures
Rittal diversity, from small distributors, to FM wall-mounted distributors, to two-door bayed enclosures.

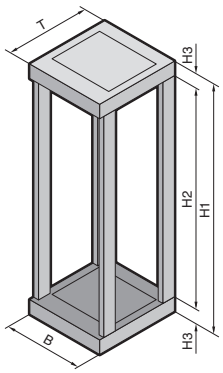


FM system strips
for DIN strips, dividing strips 71 and FM universal mounting brackets.



FM system rods
for LSA-Plus-Profil modules 2/10.

Rack system, based on Rittal TC rack



Material:
Roof/base frame:
Sheet steel, 2 mm
Frame:
Aluminium

Surface finish:
Roof/base frame:
Powder-coated in RAL 7035
Frame:
Natural, zinc-plated, passivated

Supply includes:
Frame:
4 supporting aluminium uprights,
the two front uprights are prepared to accommodate doors whilst the two rear uprights are prepared to accommodate a rear panel and a ceiling fastening.

Roof/base frame:
To accommodate roof/base cover modules.
Fitted as standard with cover plate (D = 300 mm) or sliding cover (D = 600 mm),
4 levelling feet.

Property rights:
German patent no. 43 33 027
European patent no. 645 957
with validity for FR, GB, IT, NL
US patent no. 5,513,759
Jap. patent no. 233373/94

Note:
Used in conjunction with metric (535 mm) mounting angles, the Telecommunication Rack meets the requirements of ETS standard 300119-3.

Available on request:
- TC rack fully fitted with all mounting parts
- Divided front doors
- Special sizes

Acessories for Rittal TC Rack

Door

For front mounting, with 180° hinges, locking rod, double-bit lock insert (may be exchanged for Ergoform-S lock system).

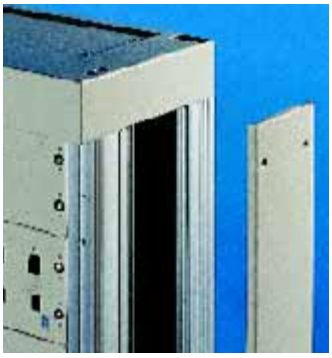
Material:
Sheet steel

Colour:
RAL 7035

Sheet steel door at front	Model No. DK
Solid	**7720.035**[1)]
With vent slots	**7722.035**[1)]
With safety glass insert	**7725.035**[1)]

Lock system	Model No. SZ
Ergoform-S handle RAL 7035	2435.000
Lock no. 3524 E	2467.000

[1)] Extended delivery times.
Available on request.



Rear/side panel

To finish off a complete enclosure unit, including assembly material.

Material:
Sheet steel

Colour:
RAL 7035

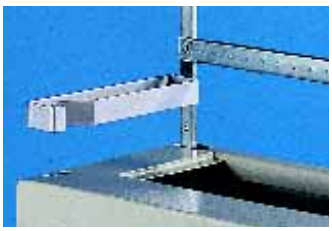
For side panels DK 7713.235 and DK 7716.235:

German patent no. 43 33 025
US patent no. 5,584,406

	For enclosure depth mm	Packs of	Model No. DK
Side panel	300	2	**7713.235**
Side panel	600	2	**7716.235**

	For enclosure width mm	Model No. DK
Rear panel	600	**7729.235**[1)]

[1)] Extended delivery times.



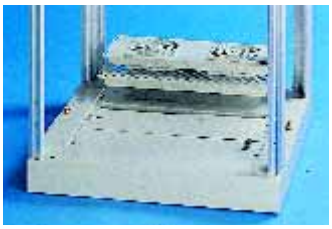
Ceiling fastening

Infinitely height-adjustable for ceiling fastening of free-standing Rittal TC Racks and for cable routing.
Max. mounting height of vertical stays: 550 mm

Material:
Sheet steel, zinc-plated, passivated

Model No. DK	7719.000

Supply includes:
2 vertical stays,
1 horizontal rail,
2 cable shunting rings,
including assembly parts.



Roof and base/plinth insert

The inserts may be fitted in the roof or base/plinth as required.

Material:
Sheet steel

Colour:
RAL 7035

Roof and base/plinth insert	Model No. DK
For cable entry[1)]	**7701.035**
With vent slots	**7702.035**
With active fan insert	**7703.035**

[1)] For Rittal TC Rack DK 7726.035.
Special design for DK 7723.035 available on request.

Mounting angles on a U/SU pitch pattern and T channel mounting angles,

482.6 mm (19″)/metric (535 mm)

The mounting angles are simply screwed to the rack upright; a combination of 482.6 mm (19″) and metric (535 mm) mounting angles is also possible. Also available in a T channel version. The mounting angles are depth-adjustable including mounting material.

	Packs of	Model No. DK		
		U pitch pattern mounting angles	SU pitch pattern mounting angles	T channel mounting angles
46 U	2	**7758.000**	–	**7758.100**
82 SU	2	–	**7760.000**	**7760.100**

Material:
Aluminium, clear-chromated

Accessories:

Captive nuts M5 /M6, spring nuts, screws M5 /M6,
see page 1019.

Depth stays

For infinitely variable adjustment of metric (535 mm) or 482.6 mm (19″) mounting angles across the entire enclosure depth, or for attachment of a second pair of 482.6 mm (19″) mounting angles at the rear.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Depth stays, including assembly parts.

Enclosure depth mm	Packs of	Model No. DK
300	6	**7128.000**
600	6	**7129.000**

Cable clamp rails

For installation in the enclosure width and depth. Fully height-adjustable for cable clamping with rear or side cable routing.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Cable clamp rails,
including assembly parts.

Enclosure width mm	Packs of	Model No. DK
600	4	**7101.000**

Enclosure depth mm	Packs of	Model No. DK
300	4	**7090.000**
600	4	**7107.000**

Clip-on nuts

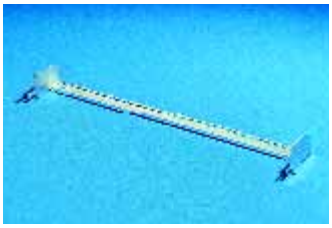
For variable interior installation of TC racks. Simply clip onto one of the two channels, for infinitely variable component mounting.

German patent no. 195 24 648
European patent no. 0 836 679
Japanese patent no. 28 91 779
US patent no. 5,897,276

Packs of	Model No. FR
50	**2102.500**

Accessories:

M6 assembly screws,
see page 1019.



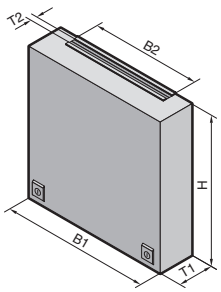
Cable clamp strap

For system-compatible cable routing in the TC Rack, behind a pair of 482.6 mm (19″) mounting angles.

Material:
Sheet steel, zinc-plated, passivated

Depth mm	Packs of	Model No. DK
100	6	**7875.400**

Small FM distributors



Material:
Sheet steel, 1.5 mm

Surface finish:
Powder-coated in RAL 7035

Supply includes:
Two-part enclosure

Wall section:
With mounting holes for wall mounting, 2 comb strips for cable clamping and brush insert for cable entry, shunting ring for system-compatible routing of telecommunications cables.

Cover:
Retaining device and two cam locks with double-bit lock insert.

Property rights:
German patent
no. 44 10 795

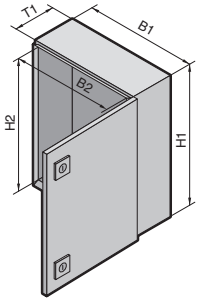
Modular FM wall-mounted distributor



Material:
Sheet steel, 1.5 mm
Door: 2.0 mm

Colour:
RAL 7035

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
Enclosure: Based on Rittal AE with gland plate at bottom, swappable door hinge (height 1200 mm with 3-point locking rod and double-bit lock), earth rail, cable clamp rail,
2 punched rails to accommodate FM system strips,
FM system rods and
FM cable shunting strips.
Top horizontal punched rail to accommodate cable shunting rings, double-bit lock inserts.

Available on request:
- FM wall-mounted distributor configured with Rittal standard accessories (FM system strips, FM system rods, FM cable shunting strips etc.) to order.
- Cable routing with brush strips top/bottom.

Approvals,
see page 92.

[1] FM universal mounting bracket, VS standard, DIN strips, 71 dividing strip and distributor system series 5000 may be fitted.
[2] Extended delivery times.

Accessories Page 832

FM system strips

For user-specific solutions or modular FM enclosure assembly. The following connection systems may be mounted on the FM system strips:

- DIN connector strips to DIN 47 614, type B; soldering lugs to DIN 41 499, LSA-Plus connector strips 1/20 to DIN 47 608 with 170 mm mounting dimension, vertical (with 2 FM system strips, horizontal mounting is possible).
- Cable retainers or routing troughs for LSA connection technology.
- Dividing strip 71.
- Corning series 5000 distribution system for professional assembly of modern distributors with plug-type Faston technology.

The FM system strip features a 25 mm DIN pitch pattern (DIN 43 660). Shunting rings of plastic or metal may be fitted here for cable routing. As an alternative to this, however, FM cable shunting strips may also be used.

Design:
Installation height: 120 mm
Installation width: 75 mm

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
1 FM system strip,
2 shunting rings (105 x 70 mm),
including assembly parts.

Accessories:

FM universal mounting bracket,
see page 811.
Shunting ring (plastic) DK 7218.035,
DK 7219.035,
see page 984.
Shunting ring (metal) DK 7111.000, DK 7111.900,
DK 7112.000,
see page 810.
FM cable shunting strips,
see page 810.

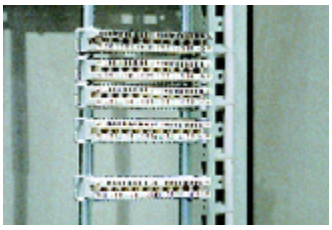
Accessories for FM distribution racks



FM system rods

For user-specific solutions or modular FM enclosure assembly. LSA-Plus profile modules 2/10 may be mounted on the FM system rods. The rod diameter is 12 mm and the rod spacing 95 mm. The FM system rods may be supplemented with FM cable shunting strips, to permit the accommodation of patching cables.

Design:
Installation height: 120 mm
Installation width: 110 mm

Material:
Round steel, clear-chromated

Supply includes:
2 rods,
2 rod holders, plus (with 650 paired wires and more) an additional rod spacer,
2 shunting rings (105 x 70 mm),
including assembly parts.

LSA-Plus[1] profile module 2/10	Length mm	Packs of	Model No. DK

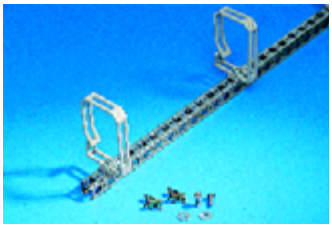
730 DA	1825	1 set	**7539.000**

[1] Refers to LSA strip pitch pattern of 25 mm.



FM cable shunting strips

For user-specific solutions or modular FM enclosure assembly.
FM cable shunting strips allow shunting between the connection systems.
The FM cable shunting strips are supplementary to FM system strips and FM system rods, and are designed for routing patch cables. They are mounted on the sides, next to the FM system strips or FM system rods.

Design:
Installation height: 132 mm
Installation width: 70 mm
Shunting ring: 105 x 70 mm

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
1 punched rail,
shunting rings,
including mounting accessories.

Shunting ring	Length mm	Packs of	Model No. DK
2	425	1 set	**7233.000[1]**

[1] Extended delivery times.

Cable shunting ring

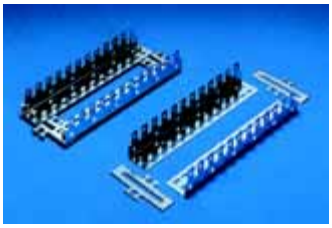
For flexible and system-compatible cable routing on FM system strips, FM distribution enclosures or at the sides on 482.6 mm (19″) mounting angles.

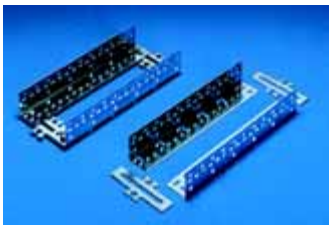
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Locating plate and assembly parts.

Dimensions mm	Packs of	Model No. DK
120 x 90	10	**7111.900**
120 x 60	10	**7111.000**
80 x 40	10	**7112.000**

German patent no. 38 13 002





FM universal mounting bracket

The universal mounting brackets consist of 2 brackets that can be combined with the connection systems of other manufacturers, depending on how they are positioned next to each other. The brackets may be slid flexibly against each other so that strips with different lengths can be used. The mounting brackets can be mounted in FM distribution enclosures or on FM system strips.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
2 mounting brackets, support strips, assembly parts.
Mounting bracket, type A for LSA-Plus strips (8 or 10 p. wires) and other commercially available connection systems.
Mounting bracket, type B for VS-Standard and other commercially available connection systems.

Mounting bracket	Length mm	Connection system	LSA-Plus	VS standard	Other connection systems			Packs of	**Model No. DK**

[1)] Extended delivery times.

Rittal **outdoor enclosures, outdoor climate control components and remote monitoring systems** will withstand even the toughest conditions.

In this respect, we are uncompromising.

From basic requirements such as humidity, temperature fluctuations and sunlight, to **extreme conditions** such as seawater resistance or earthquake resistance, through to protection against vandalism, Rittal has the answer.

In this way, we ensure that there are no limits to our customers' targets.

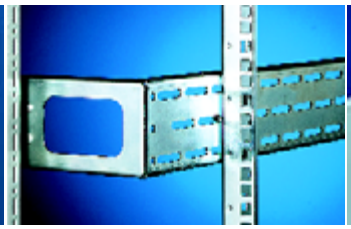
CS outdoor enclosures

Features

For all requirements in the outdoor sector, Rittal has the ideal enclosure solution, thanks to its platform strategy.
With single-walled or twin-walled enclosures of aluminium or coated sheet steel, as well as an extensive range of accessories. With constant interior temperatures and perfect climate, thanks to in-house development and production of cooling units, heat exchangers and heaters.

CS Toptec

The CS Toptec is based on the **TS 8 frame of stainless steel** 1.4301. Fully symmetrical,



more options for universal interior installation thanks to two all-round mounting levels on

a 25 mm pitch pattern, and **compatibility with system accessories TS 8.**

In the twin-walled enclosure all panels and doors are built up externally. This chimney effect reduces the influence of sunlight on the enclosure.

You are able to utilise the entire interior for your installation.

Bayed enclosure suites and enclosures with doors all round can be achieved thanks to the **combination of assembly components.**

CS wall-mounted enclosures

The **enclosure-within-an-enclosure concept** with the curved designer cover is a characteristic feature.

Security lock on the designer cover and door of the interior enclosure.

Air louvres at the sides and in the rear panel.

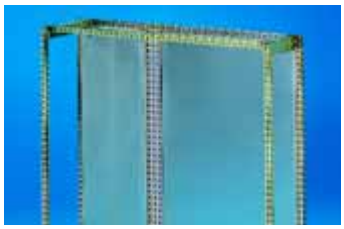
Features

CS compact enclosures

Application diversity: The basic dimensions of the compact enclosures correspond to Deutsche Telekom's base/plinth dimensions KVz 83 and 84.

The **rain canopy for optimum weather protection** and to accommodate an air/air heat exchanger.

Ergoform padlock handle system.
Security with semi-cylinder.



Assembly-friendly: Remove the enclosure cover, interior installation is soon complete on the open mounting frame, slip the cover back over, screw-fasten into position, and voila!

The gland plates ensure a **high degree of flexibility with cable entry.**

With the **roof-mounted heat exchanger** for 1100 mm wide enclosures, the protection category of IP 55 is retained.

CS basic enclosures

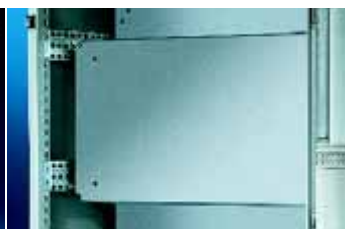
Eyebolts, concealed by the rain canopy, for crane transportation of the fully fitted unit.

Ventilation louvres all-round in the hinged rain canopy – with an all-round roof projection of 25 mm.

Width 1200 mm: **With removable centre bar** and two lockable doors with or without centre bar, with overlapping doors.

The open base frame may be covered with **gland plates.**

Individual installation with an **extensive choice of system accessories.**



25 mm system punchings for mounting 482.6 mm (19″) mounting angles, mounting plates or partial mounting plates.

CS outdoor enclosures

Features

CS modular enclosures

Protection against vandalism – These features will protect your equipment against unauthorised access:

No point of entry for leverage-type tools, because the double side panel seamlessly conceals the door hinges. The hinged

roof is screw-fastened to the enclosure frame, the base/plinth trim secured with security screws.

Batteries for emergency power back-up are securely housed in the **pull-out drawer** of the battery base/plinth.

High level of stability thanks to **ten-fold profiling** of the enclosure body.

The Rittal system punchings facilitate **highly flexible interior installation** at various levels.

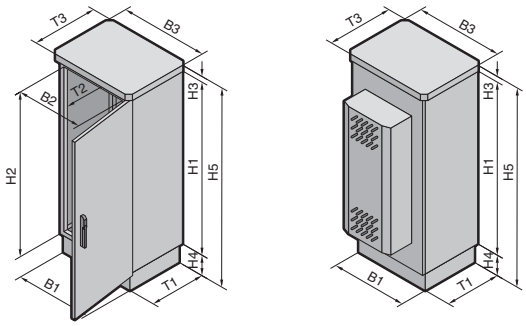
Project business

Particularly in project business, compliance with standards is of vital importance. We meet many of the required standards directly with standard enclosures or with slight modifications.
With Rittal, you get everything from a single source: From the enclosure, to climate control technology, to cable assembly. Within the framework of system integration, the entire AC/DC power supply and customer's system technology are installed.

Examples of some of the tests passed are listed below:

- Toptec without climate control module:
  Protection category testing IP 55 and NEMA 4x, transport tests to IEC 60 271-3-4 class 4M5, temperature cycling and humidity to Bellcore 487-R3-204,
- CS Toptec with climate control module:
  Salt spray fog testing (2 x 7 days) to Bellcore 487-R3-203,
- CS modular enclosures:
  Storage, transportation and operation to IEC 721-2-3.

CS Toptec



B = Width
T = Depth

Material:
Enclosure frame:
1.5 mm stainless steel 1.4301
Doors, side panels, roof:
2.0 mm aluminium, AlMg3
Base/plinth:
2.0 – 4.0 mm aluminium, AlMg3

Colour:
RAL 7035

Protection category:
IP 55 to EN 60 529/10.91, complies with NEMA 3R.

Supply includes:
Twin-walled outdoor enclosure fully preconfigured.
Door front and rear, side panels left and right.
Walls and doors doubled on the outside by 25 mm,
doors hinged on r/h side,
with handle and security lock to DIN 18 254.
Roof projecting on all sides screw-fastened with security screws,
may be exchanged for eyebolts.
Roof additionally protected from dismantling by the door edge fold.
Side panels vented, inner side panel screw-fastened to the enclosure frame from the outside,
base/plinth including two screw-fastened gland plates for cable entry, screw-fastened base/plinth trim panels at the front and rear.

Version with heat exchanger/cooling unit:
Door with integral climate control unit.
Climate control unit attached to the mounting frame in the door.
Supplied state: as a built-in unit inside the enclosure, minimum exterior projection.

Note:
The enclosure dimensions correspond to IEC EN 61 969.

Property rights:
German patent
no. 101 13 893
UK Patent no. 2 375 472

Also required:

For versions with climate control units, cable connection kit, see page 663.

Optionally available:

Size variants, baying variants, complete system integration up to Level 4.

Technical specifications:
Basic module:
Solid top and sides, solid base with 4 gland plates (width 600 mm with 2 gland plates).
Double-walled rear panel screw-fastened from the inside.
Double-walled door with Ergoform padlock handle with 3-point locking, foamed-in PU seal. Gas pressurised spring as door stay.
Double side panel across the enclosure and base/plinth, screw-fastened from the inside, screws not visible from the outside.
Rain canopy, 75 mm high, hinged, 25 mm projection on all sides.
Base/plinth, 100 mm high.

Material:
Enclosure, roof and side panel:
2.0 mm aluminium AlMg3
Base/plinth:
3.0 mm aluminium AlMg3

Colour:
RAL 7035

Protection category:
IP 55 to EN 60 529/10.91, complies with NEMA 3R.

Supply includes:
Twin-walled, fully assembled enclosure, consisting of basic module, roof, side panels and base/plinth.

Note:
Modular enclosure sheet steel, zinc-plated, on request.

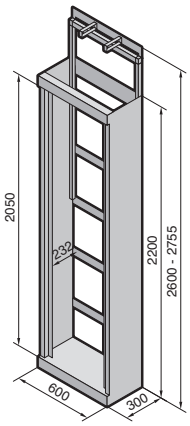
Order example:
Enclosure 600 x 800 x 600 mm of aluminium AlMg3 with standard base/plinth and roof-mounted cooling unit.

You will need:

Enclosure:	Basic enclosure 600 x 800 x 600 mm	**CS 9751.015**
Base/plinth:	Standard base/plinth 100 mm	**CS 9755.015**
Roof-mounted climate control:	Roof-mounted cooling unit	**CS 9762.012**
	Climate hood	**CS 9756.015**
Roof:	Standard roof	**CS 9757.015**
Side panel:	Side panel for 100 mm base/plinth and roof-mounted climate control	**CS 9753.095**

CS Indoor Rack



Material:
Side panels, roof and base frame:
Sheet steel, 2.0 mm
Mounting angles:
Extruded aluminium section

Surface finish:
Powder coated in textured RAL 7035
Mounting angles:
Natural aluminium, clear-chromated

Supply includes:
Screw-fastened frame, consisting of
2 side panels,
roof and base frame,
front plinth trim.
2 mounting angles,
ceiling attachment,
4 levelling feet,
4 rear panel struts,
enclosure panels, earthed.

Note:
The screw-fastened rack will accommodate metric or 482.6 mm (19″) installed equipment (to IEC 907 or IEC 297 and DIN 41 494). In addition to the basic rack, which satisfies the requirements of ETSI standard 300119-3, customised solutions can be designed in next to no time and implemented cost-effectively.

The following variants of the Indoor rack are available, amongst others:
- Solid front door
- Vented front door
- Horizontally divided doors
- Folding doors
- Overlapping doors
- Roof modules
- Cutouts in the enclosure panels
- Interior installation with system accessories

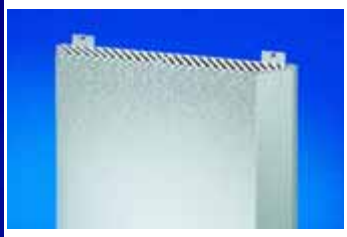
CS Outdoor climate control

Features

Rittal Communication Systems offer everything you need to protect your electronic equipment, from weather-tested enclosure solutions, to a variety of climate control components, through to complete security management systems. Cooling units, heat exchangers, fans and heaters especially designed for outdoor use ensure constant interior temperatures.

The protection category of IP 55 for the system as a whole is retained when using Outdoor heat exchangers and cooling units.

Flexible climate control



Climate control modules in various different output levels may be variably positioned on the door, rear panel, side panel or roof of the modular enclosure. For use in a temperature range from –33°C to +55°C (with cooling unit) or +65°C (with heat exchanger).

Cooling of the sensitive electronics in an outdoor enclosure requires **intelligent climate management.**

Rittal climate control modules keep the interior temperature at a consistently low level.

CS Toptec climate control

The **full 25 mm double wall** ensures heat exchange and minimises the influence of sunlight. The **concept for active climate control** with fixed cut-out dimensions and a depth-variable mounting frame leaves freedom of choice between a heat exchanger and a cooling unit, depending on the parameters at the installation site.

Heat exchanger for CS modular enclosures

Type 1 for roof mounting
Without microcontroller, without heater.

Type 2 for roof mounting
With microcontroller and heater as standard.

Mounting frame:
required for CS 9765.051.

Type 3 for wall mounting
With microcontroller and heater as standard. For external mounting on side panels and rear panels.
The picture shows the heat exchanger with designer cover (not included in the supply).

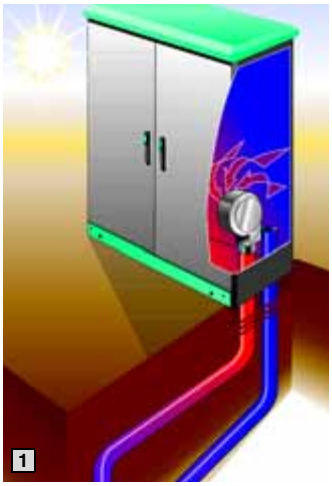
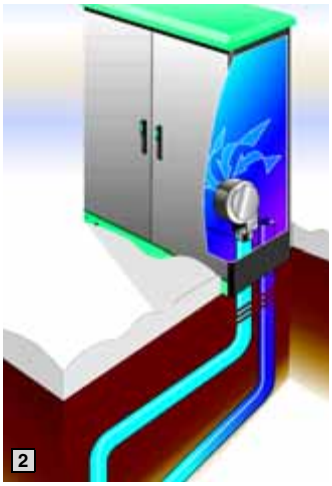
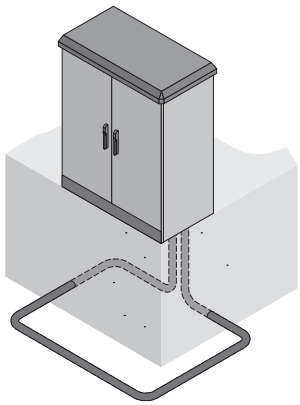
Geothermal heat exchangers, Terravent



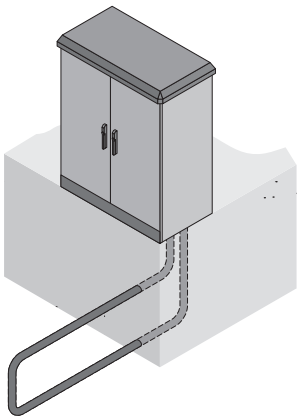
1



2



3



4

Rittal Terravent
This ingeniously simple and effective climate control principle, which uses geothermal effects to cool and heat, underscores Rittal's expertise in all aspects of enclosure systems for outdoor siting. The geothermal heat transmitter is suitable for use whenever earthworks are required to install an outdoor enclosure.
Throughout the world, at a certain depth beneath the earth's crust, the temperature is always roughly the same, whatever the season; and this fact is used to cool and heat outdoor enclosures. The hot air from the enclosure is forced into a pipe with a radial or axial fan.

A pipeline system laid in the earth cools the air, which in turn is used to cool the enclosure. In cool external temperatures, the temperature of the air inside the pipeline system rises, and this achieves a heating effect.
The inlet and outlet points of the pipes can be freely positioned to effectively avoid hot spots. Depending on the application, the air discharge and air inlet can be positioned in the base/plinth, in the roof, or at freely selectable positions inside the enclosure.

Benefits of the geothermal heat exchanger
- With the sealed ventilation system, ambient air is unable to penetrate the enclosure, which in turn prevents the ingress of humidity and aggressive pollutants from the air.
- Minimal energy requirements, since only a radial or axial fan is required to generate the air flow. The fan motors are available in various operating voltages.
- Reduction of noise emissions, since there are no active climate control components mounted on the outside of the enclosure.
- Minimal maintenance required for the fan system.
- Control, monitoring and alarm relays can be achieved via the CMC.

US patent no. 6,523,602

1 With a radial or axial fan, the hot air from the enclosure is forced into a pipe. A pipeline system laid in the earth cools the air, which in turn is used to cool the enclosure.

2 In cool external temperatures, the temperature of the air inside the pipeline system rises, and this achieves a heating effect.

3 **With the pipeline system laid horizontally**
Excellent heat dissipation is effected, because the pipeline system is laid horizontally on one level. Major excavation work is, however, required.

4 **With the pipeline system laid vertically**
The pipeline system to and from the outdoor enclosure is laid in a pit. The effects of heat dissipation are somewhat less pronounced, but the pipes are simply laid in a pit where the supply lines to the enclosure can also be laid.

Terravent supply includes
- Calculation of the maximum required and maximum possible thermal output.
- Calculation and dimensioning of the fan, the pipe diameter, the pipe length, and the best way of laying the pipe.
- Determination of the optimum positioning of the air inlet and air outlet on the enclosure.
- Supply of all components, pre-assembly of the fan pipe fixtures in the outdoor enclosure, installation of the fan, insulation of the enclosure (where necessary).

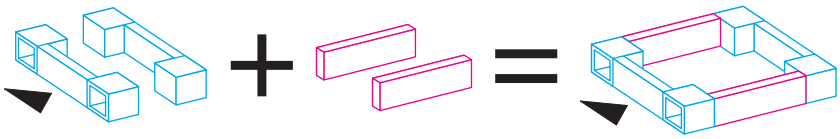
Base/plinth TS



One Model No.
for the
base/plinth components
front and rear.

One Model No.
for the
base/plinth trims
at the sides.

A complete
base/plinth.

Modular base/plinth diversity

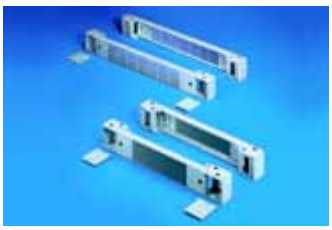
Regardless of the enclosure depth:
The base/plinth components at the front and rear, pre-configured with corner pieces, are always the same for the chosen width.
Only the side trim panels are selected according to the enclosure depth and the required base/plinth configuration. The modular concept produces exceptional advantages in terms of cost and function.
Assembly to the enclosure is conveniently carried out from the outside. The base/plinth interior offers diverse opportunities for mounting levels for cable management.

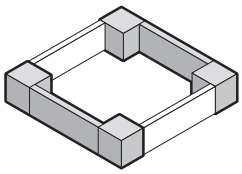
Base/plinth height	Basic form	Cable gland options			Stabilisation of bayed base/plinth	
100 mm						
200 mm						
Function and cost benefits

Fewer parts, more opportunities, lower purchasing, storage and assembly costs – the formula for the new modular base/plinth system.

The following table shows three bayed base/plinths in 200 mm height illustrating a wide range of possible solutions and the potential savings with trim panels compared with the previous 200 mm base/plinth system each with two trim panels of 100 mm height at the sides.

Sample solutions	New supply includes	Functional benefits	Savings potential compared with twelve 100 mm trim panels
	3 packs of base/plinth components 1 pack of base plinth trim panels 200 mm high	Continuous cable chamber	2 trim panels 200 mm
	3 packs of base/plinth components 1 pack of base plinth trim panels 200 mm high 1 pack of base plinth trim panels 100 mm high 1 pack of base/plinth baying bracket TS 8601.100 (packs of 20) 4 units are required for this solution	Additional stabilisation for transportation purposes with base/plinth trim rotated through 90°	2 trim panels 200 mm 2 trim panels 100 mm
	3 packs of base/plinth components 2 packs of base plinth trim panels 200 mm high	Shielding of the base/plinths from one another	4 trim panels 200 mm
	3 packs of base/plinth components 1 pack of base plinth trim panels 200 mm high 1 pack of base plinth trim panels 100 mm high	Additional connection of the base/plinth	2 trim panels 200 mm 2 trim panels 100 mm
	Other options: • Cable entry at the side by mounting a 100 mm base/plinth trim panel (top or bottom). • Cable entry from the rear by dismantling one or more trim panels of the base/plinth components. • Cable clamp rail fitted on the 100 mm high trim panel.		





Base/plinth components front and rear

Sheet steel
for TS, CM, CL, PC-TS, IW, FR(i), TE
Base/plinth component consisting of one trim panel and two pre-configured corner pieces.
In 200 mm high base/plinth components, one trim panel is divided into two for cable entry.

Material:
Sheet steel, spray-finished
Cover caps plastic RAL 9005/7035

Supply includes:
1 set =
2 base/plinth components, 4 cover caps,
4 screws and captive nuts M12
for mounting on the enclosure.

Accessories:

Base assembly plate SO 2817.000,
see page 838.
Filter mat for trim panel, vented,
see page 840.

Detailed drawing,
see page 836.

Base/plinth trim, side

Sheet steel
for TS, CM, CL, PC-TS, IW, FR(i), TE
For mounting between the base/plinth components. At 200 mm height, two 100 mm base/plinth trims may be used. Base/plinth trim panels (100 mm high) may be installed rotated through 90° in order to stabilise bayed base/plinth components.

Material:
Sheet steel, spray-finished

Supply includes:
1 set =
2 base/plinth trim panels, including parts for attaching to the base/plinth components.

Also required:

Base/plinth baying bracket TS 8601.100,
see page 838,
when base/plinth components are fitted by rotating through 90°.

Accessories:

Assembly bolts for base/plinth,
see page 838.

Detailed drawing,
see page 836.

Base/plinth TS

Transport plinth

for TS

For the transportation of heavy, bayed enclosure suites. Available in 200 mm increments from 2 to 5 m.
Transport plinths can have 2 tubes welded to receive cross-bars for transportation.
Variable punchings to suit all enclosure widths of 600 mm and above.

Surface finish:
Primed in reddish-brown rust-inhibiting paint, optionally spray-finished.

Note:
Please state the required width and depth of the enclosure suite when ordering.

Concrete base/plinth

for Outdoor enclosures

The base/plinth is made from pre-cast concrete sections which are easily fitted in situ. Front/rear base/plinth plates may be withdrawn for servicing works.
Total height approx. 1000 mm,
excavation depth approx. 700 mm.

Material/Surface finish:
Light concrete, untreated

Supply includes:
1 base plate,
2 side parts,
two-piece rear and front panel,
assembly parts
and fastening screws for mounting the enclosure.

Transport castors

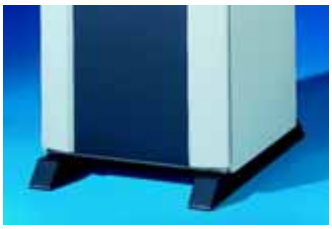
for base/plinth, complete
For locating onto the base/plinth corner piece 100 or 200 mm high by raising or tilting.

Load capacity:
Maximum permissible static load:
100 kg per twin castor

Supply includes:
1 set =
4 twin castors,
2 with, 2 without brakes.

Colour:
RAL 7022

Ground clearance mm	Model No. PS
60	**4570.000**



Cross-member

for TS, PC, IW, ES, AP
adjustable

To increase stability, the cross-member is positioned 138 mm above the base frame of the enclosure at the front and rear. For deeper enclosures, the rear part may be extended and screw-fastened again. For screw-fastening to the floor and enclosure with mounting hole at the sides front and rear. The castors and levelling feet may be secured to the welded nuts M12.

Material:
Sheet steel, spray-finished

Colour:
RAL 7015

Note:
For mobile use, the cross-member must be screw-fastened twice in the corners of the enclosure.

Accessories:

Socket strip,
see page 746.

Stabiliser bracket

for base/plinth TS
The stabiliser bracket may be retrospectively screw-fastened to the outside of the base/plinth corner pieces.

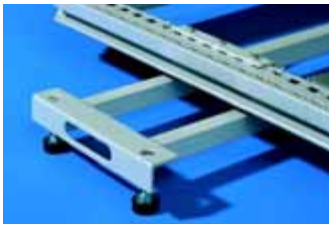
Load capacity:
Up to a maximum of 80 kg static load.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035, warning markings RAL 2002

Supply includes:
Assembly parts.

Packs of	Model No. DK
2	**7825.150**



Stabiliser

for server racks DK-TS, FR(i)
The pull-out stabiliser is quickly and easily retro-fitted to the base frame of an FR(i) or TS 8 server rack and only extended when necessary. It may be used in combination with levelling feet and/or castors.

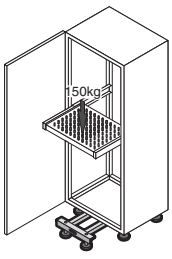
Load capacity:
Up to a maximum of 150 kg static load.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Enclosure depth mm	Model No. DK
900	**7825.200**
1000	**7825.250**

Note:
The stabiliser cannot be used with gland plates or base/plinths.



Base

Levelling feet

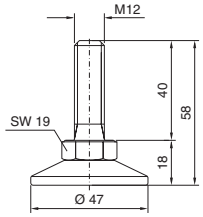
18 – 43 mm high
To compensate for height differences with floor irregularities. Thread length 40 mm.
Assembly thread M12.

Maximum permissible static load:
approx. 300 kg per levelling foot.

For:
- Baying system TS 8
- PC enclosure system
- Pedestal base plate CP 6137.035 – CP 6137.535
- Pedestal CP 6141.XXX
- Industrial workstations
- flexRack(i)

Packs of	Model No. PS
4	**4612.000**

Also required:
For mounting on the TS base/plinth:
Base/plinth adaptor TS 8800.220,
see page 849.



Levelling feet

85 – 115 mm high
For mounting on TS, ES and PC enclosures, for easier floor cleaning and to compensate for floor irregularities.
Height 100 mm.

Maximum permissible static load:
350 kg per levelling foot.

- PC enclosure system
- Pedestal base plate CP 6137.035 – CP 6137.535
- Pedestal CP 6141.XXX
- Industrial workstations
- flexRack(i)
- Data Rack

Also required:
For mounting on the TS base/plinth:
Base/plinth adaptor for twin castors TS 8800.290,
see page 849.

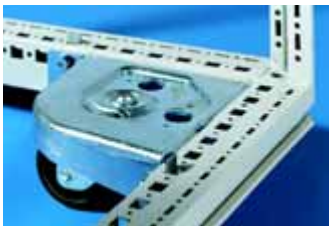
Transport castors

for TE
For easy transportation between sites.
The castors may additionally be screw-fastened to the levelling feet in the corner areas within the base frame.
Ground clearance: 58 mm

Permissible static load:
300 kg per enclosure

Supply includes:
1 set = 4 castors
including assembly parts.

Packs of	Model No. TE
1 set	7000.672



Transport kit

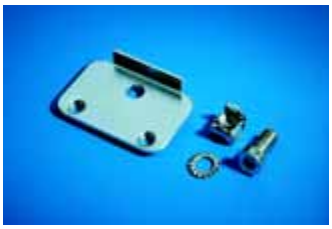
for DK-TS
For convenient movement of the network enclosures or as a mobile rack. Ground clearance approx. 40 mm.

Permissible static load:
750 kg per enclosure

Supply includes:
1 set = 4 castors (2 steerable ones)
including assembly parts.

Packs of	Model No. DK
1 set	7825.900

Note:
Only for enclosures without gland plates or gland plate frames.



Base/plinth adaptor

for levelling feet
Connection component for fastening M12 levelling feet PS 4612.000 to the TS base/plinth.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. TS
4	8800.220

Also required:
Levelling feet, PS 4612.000,
see page 848.

Base/plinth adaptor

for twin castors
Connection component for mounting twin castors to the TS base/plinth.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. TS
4	8800.290

Also required:
Base/plinth trim, side,
see page 835,
in all situations where a twin castor is mounted.

Base

Width divider

Divides 1200 mm wide TS enclosure into two halves.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
1 set =
1 bracket each for right/left,
2 compensation plates for the top,
assembly parts.

Packs of	Model No. TS
1 set	**8800.200**

Also required:

Depending on the installation situation:
TS punched rail 18 x 38 mm,
see page 923.
PS punched section without mounting flange,
see page 925.

1st mounting situation:
Two mounting plates side by side.
Two mounting plates (from 600 mm wide enclosures) in a 1200 mm wide enclosure permit independent positioning and easy handling.

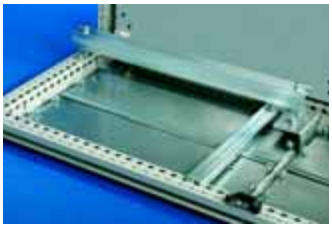
Also required:

In accordance with the enclosure depth:
4 TS punched rails 18 x 38 mm at the bottom,
see page 923,
1 PS punched section without mounting flange 23 x 73 mm at the top,
see page 925.

2nd mounting situation:
System support rails, fitted on the left.
Whilst heavy installed equipment rests on the system support rails, the remaining floor space is left free, e.g. for unhindered cable entry.

Also required:

2 system support rails PS 4361.000,
see page 926.
1 TS punched rail 18 x 38 mm
in accordance with the enclosure depth
(included with the supply of the standard enclosure).



3rd mounting situation:
Cable clamp rail, installed on the left.
With 1200 mm wide enclosures, the width divider allows cable entry and cable clamping to be arranged differently on the left and right of the enclosure.

Also required:

1 cable clamp rail PS 4191.000,
see page 979.
1 TS punched rail 18 x 38 mm
in accordance with the enclosure depth
(included with the supply of the standard enclosure).

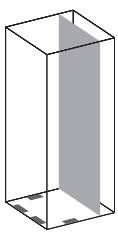
Base assembly bracket

for TS, ES, AP universal console
For anchoring the enclosure at any position of the base frame, particularly in cases where the existing holes in the frame or base tray cannot be used due to the installed equipment or because the substructure prevents them from being used.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. TS
4	**8800.210**

Note:
Additional holes in the base are required for mounting.



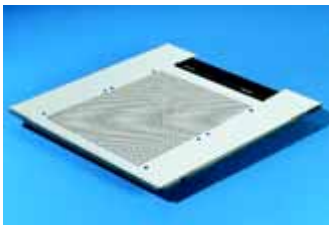
Reinforcement bracket

for TS, ES, AP universal console
For use as an additional stabiliser to the clamping straps when populated enclosures are screw-fastened via the base tray to the base/ plinth or pallet for transportation purposes.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts

Packs of	Model No. TS
4	**8800.830**



One-piece gland plate

vented, for DK-TS, FR(i)
The slotted gland plate has a cutout in the rear for cable entry, which is concealed with brush strips. The gland plate can be mounted or removed even when installation is already completed.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts

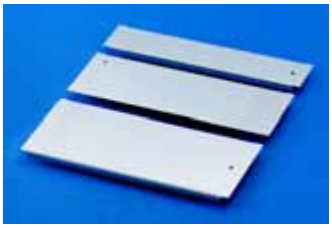
Base



Gland plate, multi-piece

for DK-TS, pre-configured
Gland plates including sliding panel with foam rubber cable clamp strip for cable entry.

Material:
Sheet steel, zinc-plated, passivated.

Supply includes:
Assembly parts.

Note:
For the size variant 800 x 800 mm, the gland plate included with the supply for pre-configured network enclosures should be additionally used. Also suitable for combined use with vented gland plate modules and those for cable entry.

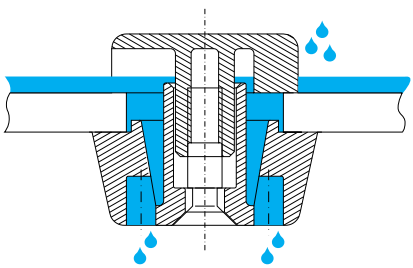
Condensate discharge

For reliable discharge from the inside and protection against splashes from the outside (labyrinth effect).
A hole diameter of 16 mm is required.
(With AE sheet steel, the holes are already provided in the base.)

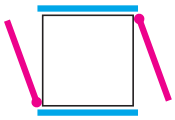
Material:
Polyamide

Colour:
Similar to RAL 7035

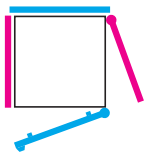
Packs of	Model No. SZ
6	**2459.000**



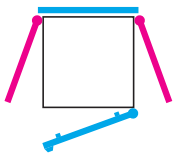
Side panels

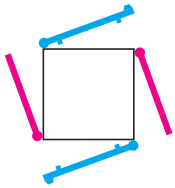


The TS side panel provides new dimensions in convenient access to the TS interior, thanks to the option of hinging.



Important:
Red areas (side panels), hinged and unhinged, must always be opposite one another. Blue areas (doors/rear panels) must always be opposite one another.





Only one surface on each vertical enclosure section may be hinged.

Note:
Climate control side panels with integral cooling module may be retrofitted instead of an enclosure side panel, see page 589.

Automatic potential equalisation

Side panels, screw-fastened, sheet steel

for TS
Easy positioning on the frame with the location aid. Six or eight enclosure panel holders with earthing insert ensure automatic potential equalisation and higher EMC protection. Earthing bolts with contact surface are pre-integrated.

Material:
1.5 mm sheet steel

Surface finish:
Dipcoat-primed,
powder-coated in textured RAL 7035 on the outside.

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
Assembly parts.

Note:
Enclosure panel holders may optionally be fitted from the inside or outside of the enclosure.
Area available for population:
External dimension – 100 mm.

Accessories:

Earth straps,
see page 960.

German patent no. 198 01 720

For RAL 7032 version, use order extension .200; to order primed version, use extension .300.
Delivery times on request.

Side panels, screw-fastened, sheet steel

for TS
To finish a complete enclosure. Easy attachment on the inside vertical enclosure frame member. Earthing inserts ensure automatic potential equalisation and a higher degree of EMC protection. Earth studs with contact surfaces are already included.

Material:
Stainless steel 1.4301, 1.5 mm

Surface finish:
Brushed, grain 240

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
Assembly parts.

To order enclosures in stainless steel 1.4404 (AISI 316L), use Model No. 8705.XXX.
Delivery times on request.

Detailed drawing,
see side panels for modular front design, page 876.

Side panels

Side panels, asymmetrical

for TS

The alternative to the standard side panel for improved visual appearance in the event of back to back, back to side or corner baying. The gap (A) which occurs with standard side panels is reduced to a standard dimension (B), see technical drawing.
In the case of the TS 8 corner enclosure, an asymmetrical side panel is included in the supply. The number of additionally required asymmetrical side panels depends on the baying variant which is selected.

Material:
Sheet steel, 1.5 mm

Colour:
RAL 7035

Protection category:
IP 55 to EN 60 529/10.91

Supply includes:
Assembly parts.

Hinges

for
TS side panels, screw-fastened, sheet steel
TS side panels, asymmetrical

The 180° opening angle allows unhindered access. May be installed optionally from the inside or outside of the enclosure: Simply replace 3 enclosure panel holders with hinges. Despite the hinge, the protection category of the enclosure is retained.

Material:
Die-cast zinc

Supply includes:
Assembly screws.

Version	Packs of	Model No. TS
RAL 7035	6	**8800.110**
RAL 7032	6	**8800.010**

German utility model no. 298 20 604
US patent no. 6,238,027

Note:
Side panel and door hinges may only be installed on the same enclosure section when using a 180° door hinge (see page 893).

Side panel, plug-type

for TS
Side panel, lockable with 3 options:
- With lock
- Internal latch

Plug-and-play compatibility system: insert side panel into the base, press upwards into the recessed handle, and rotate the two toggle locks – there is no faster way of finishing off an entire enclosure suite at the side.
In addition, the Rittal cable routing components may be attached to the integral top hat rail.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035/RAL 9005

Protection category:
IP 20/NEMA 1

Supply includes:
2 side panels with toggle locks.

Note:
The punched section (with mounting flanges) must be notched for use on the outer level.

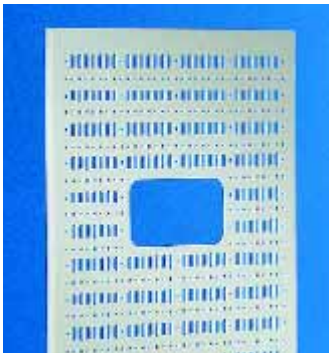
Side panels



Cable management panel

for DK-TS

The ideal, universal routing aid for network enclosures where large quantities of cables and lines are managed. Cutouts for for the attachment of cable shunting rings and nylon loop fasteners. Cable ties are available from the accessories range. With bayed enclosures, the panel may also be used as a partition with cable management facilities.
By attaching to the inner level, cables may be secured inside and out, and may also be used when a single panel is fitted.
The panel is secured to the inner mounting level of TS 8 enclosures using the assembly parts supplied. The cable management panel may be screwed to the outer mounting level on punched sections with mounting flanges.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Supply includes:
Assembly parts.

Divider panel

for TS

For shielding individual enclosure cells. Thanks to the symmetry of the frame system, the divider panel can also be used at the rear. All-round, double fold for stability and to hold the seal. Notches in the corners and half-way up the sides permit the use of angular baying brackets and baying brackets, even with a divider panel fitted. For mounting on the outer mounting level. This leaves the inner level free for further population.

Material:
Sheet steel, 1.5 mm, zinc-plated, passivated

Protection category:
IP 54 to EN 60 529/10.91

Supply includes:
Assembly parts.

Accessories:

Cover with door,
see page 860.
Baying bracket TS 8800.470 for enclosures with fitted divider panel.
see page 866.

Note:
The divider panel may also be fitted to the rear. This allows, e.g. frequency converters for heat dissipation to be installed in a divider panel with the cooling units facing outwards and protected/ finished off with a cover (see page 860).

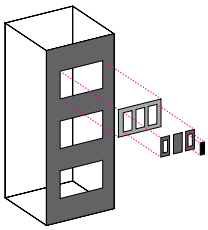
Accessories:

Baying connector TS 8800.490,
see page 864.

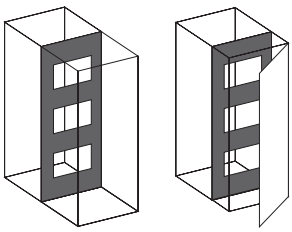
Divider panels for module plates



The divider panel and module plate system

More options:
The cutouts of a divider panel are individually equipped with module plates for 16-pole or 24-pole connectors, with module plates for cable entry and with solid module plates.

Faster assembly:
Usually only part of the total number of connector cutouts are used. Thanks to the new divider panel technique the cutouts do not need to be covered individually. The solid module plate is used instead.
The benefits: Less plates, less screws, less assembly work.



Divider panel

for module plates TS
With cutouts for the installation of module plates for connectors or for cable entry, and also for the entry of busbar systems and other installed equipment. All-round, double fold for stability and to hold the seal. Thanks to the symmetry of the enclosure frame, divider panels may also be fitted at the rear, dimenions permitting.
For mounting on the outer mounting level. This leaves the inner level free for further population.

Material:
Sheet steel, 2 mm, zinc-plated, passivated

Supply includes:
Assembly parts and multi-tooth screws M5 x 12 mm for mounting the module plates.

Note:
Notches in the corners and half-way up the sides permit the use of angular baying brackets and baying brackets, even with a divider panel fitted.

Accessories:

Module plates,
see page 859.
Cover with door,
see page 860.
Baying bracket TS 8800.470 for enclosures with fitted divider panel,
see page 866.

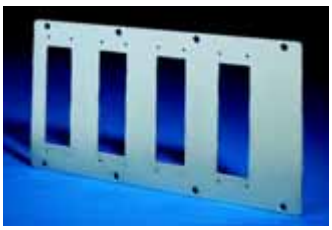
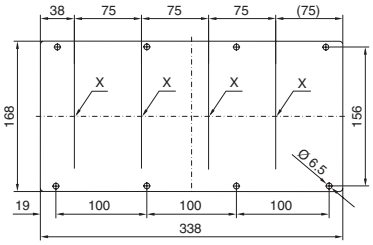
Solid
For sealing unused cutouts. Easily machined for individual cutouts.

Accessories:

Adaptor, cover,
see page 860.
Cable gland for connector cutouts,
see page 860.

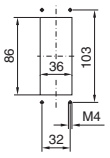


For 16/24-pole connectors
With cutouts to accommodate connectors. In addition to mounting on divider panels, module plates may also be attached to the 25 mm pitch pattern of the enclosure and to the rails of the TS/PS system.

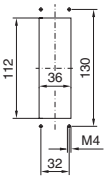


Accessories:

Adaptor, cover,
see page 860.
Cable gland for connector cutouts,
see page 860.

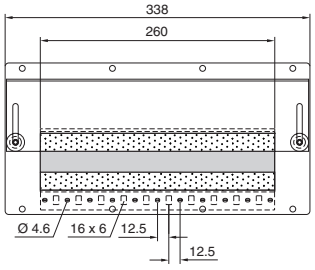


X 16-pole



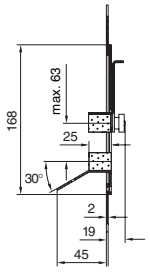
X 24-pole

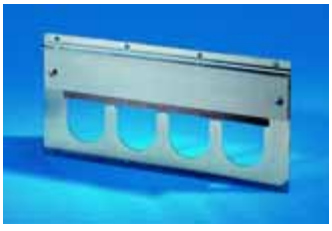
For cable entry
For the entry of pre-assemble cables. Sealed, routing is achieved via adjustable angle brackets with inserted foam cable clamp strip. Attachment bracket, punched, for cable clamping.



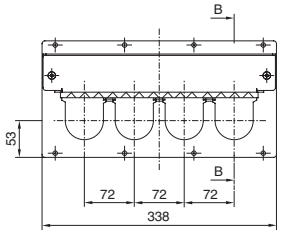
Accessories:

Cable tie for quick assembly SZ 2597.000,
see page 982.



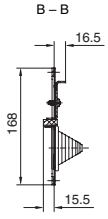


For cable entry grommets
For mounting on the divider panel for module plates TS. Slide the grommets into the cutouts, slide the clamp plate with seal down over them, and screw-fasten.

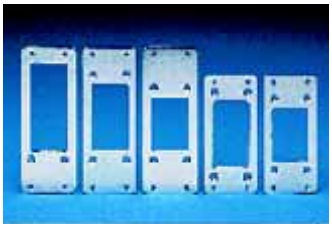


Also required:

Cable entry grommets,
see page 965
or connector grommets,
see page 965.



Module plates



Adaptor

for connector cutouts
For using connectors with varying numbers of poles.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Seal for adaptor and assembly parts.

For reduction	Packs of	Model No. SZ

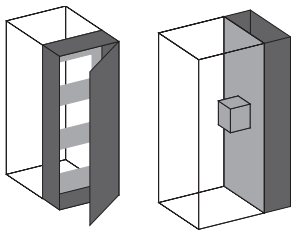
Partition

for DK-TS
For side partitioning of bayed TS server enclosures.
Up to 8 cable glands to the adjacent rack are possible, covered with blanking plates.

Material:
Sheet steel, zinc-plated, passivated

For enclosures		Packs of	Model No. DK
Height mm	Depth mm		
2200	900	1	**7831.715**

Note:
Only available on request for direct mounting on the enclosure.



Cover with door

for TS
To protect and finish off connectors or other installed equipment. 200 mm wide cover, with opening at the top or bottom for cable entry including a cover plate for unused opening.

Material:
Sheet steel
Cover: 1.5 mm
Door: 2.0 mm

Colour:
In textured RAL 7032

Supply includes:
Cover, door with locking rod and double-bit lock insert, 1 cover plate for the top or bottom.

Note:
May also be fitted at the rear to extend the enclosure depth. To cover the resultant gap, we recommend asymmetrical side panels (see page 854). In this way, for example, frequency converters to dissipate heat can be installed in a divider panel (see page 857) with the heat sinks facing outwards and protected/concealed with a cover.

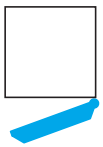
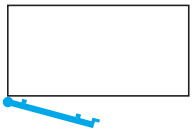
Side panel, asymmetrical



Climate control door

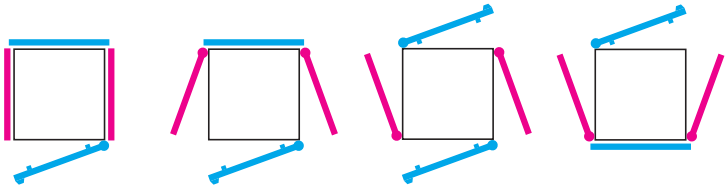
Climate control side panel



Adjacent door

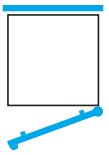
Important:

- Red areas (side panels, hinged and unhinged) must always be opposite one another.
- Blue areas (doors/rear panels) must always be opposite one another.

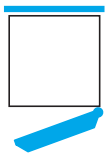


The versatile door and side panel concept also applies to the following baying variants:

. . . infinite possibilities

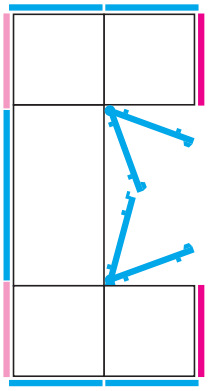


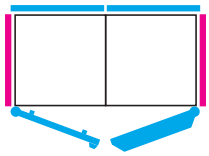
TS 8 standard enclosure

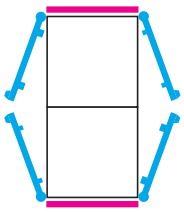


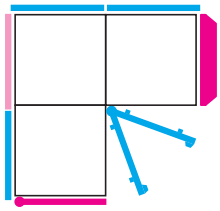
TS climate control enclosure

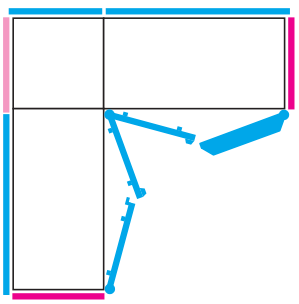
TS 8 corner enclosure

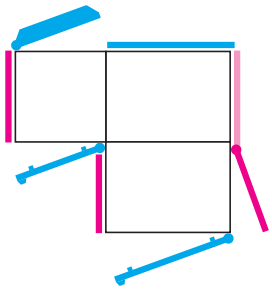


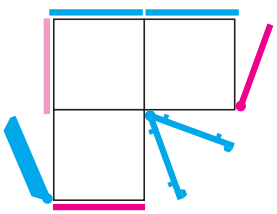




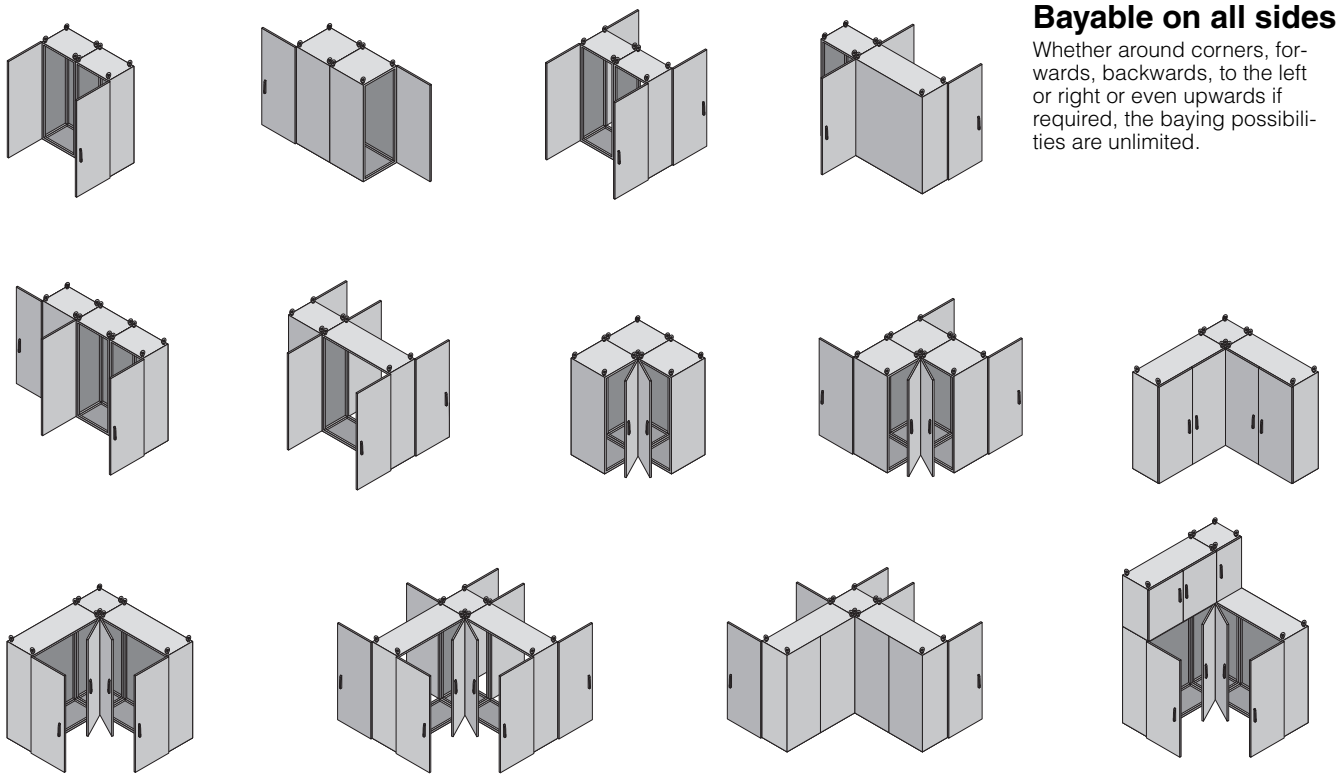






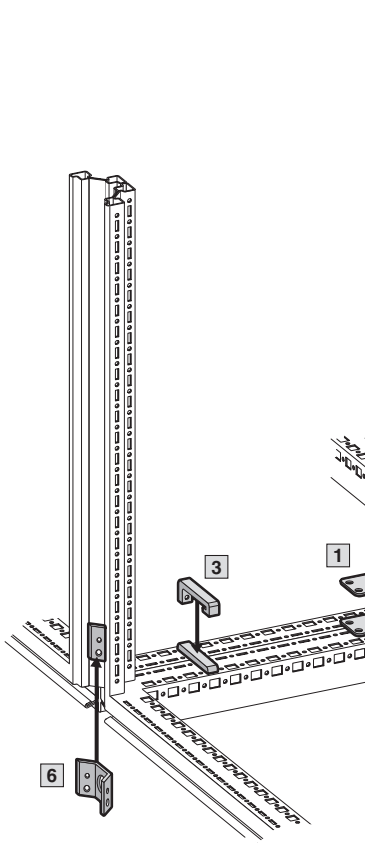


Baying at the installation site



Bayable on all sides

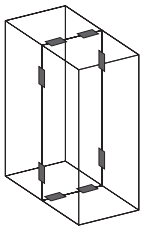
Whether around corners, forwards, backwards, to the left or right or even upwards if required, the baying possibilities are unlimited.



For baying at the installation site or for provisional siting in the workshop

1 Quick-fit baying clamps, one-piece
2 Quick-fit baying clamps, three-piece
3 Baying clamp, horizontal
4 Baying clamp, vertical for TS/TS
5 Baying clamp, vertical for TS/PS
6 Baying connector, external

Notes on the transport of bayed enclosures,
see page 864.



1 Quick-fit baying clamps, one-piece

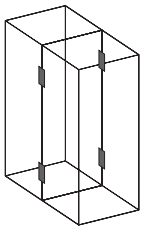
for TS/TS and FR(i)/FR(i)
Simply attach the screws, insert the quick-fit baying clamp, tap in with a hammer and lock.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
6	8800.500

Note:
Only for monting on vertical enclosure sections of FR(i).



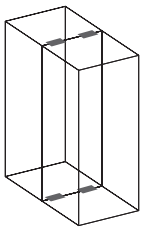
2 Quick-fit baying clamps, three-piece

for TS/TS
Simply locate, connect with the lock plate, and secure.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
6	8800.590



3 Baying clamp, horizontal

for TS/TS, TS/PS and FR(i)/FR(i)
For mounting on the horizontal enclosure sections.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

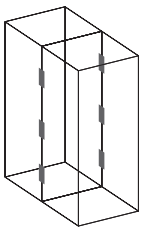
with validity for FR, GB, IT



6 Baying connector, external

for TS/TS
For mounting on the vertical enclosure sections.

Simply position on the outside and screw-fasten either from the inside or outside.

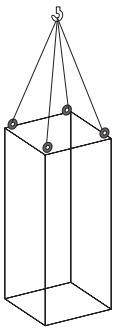
Material:
Sheet steel, zinc-plated, passivated
or stainless steel 1.4301

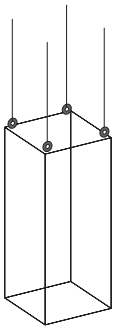
Supply includes:
Assembly parts.

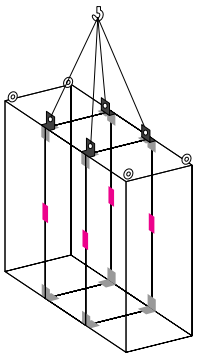
Version	Packs of	Model No. TS
Sheet steel	6	**8800.490**
Stainless steel	6	**8700.000**

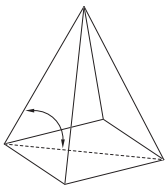
German patent no. 197 37 668

Note on the transport of bayed enclosures









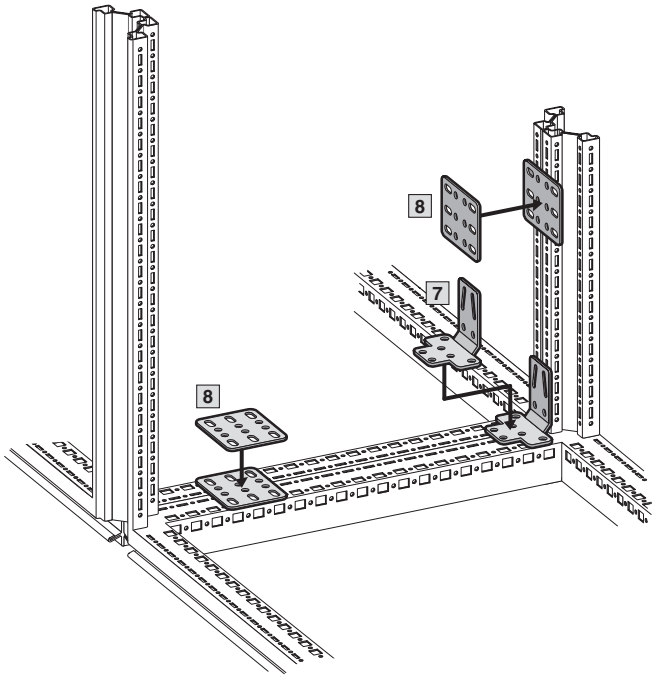
Individual enclosures are reliably transported using the eyebolts included with the supply.
For symmetrical loads, the following maximum permissible loads apply:
at 45° sling angle 4,800 N,
at 60° sling angle 6,400 N,
at 90° sling angle 13,600 N.

For the enclosure combination with angular baying brackets, quick-fit baying clamps and combination angles shown here, the load capacity with a sling angle of 60° is as follows:
for the left enclosure: 7,000 N,
for the middle enclosure: 14,000 N,
for the right enclosure: 7,000 N.

The sling angle between the roof plate and the sling has a significant influence on the total permissible load.
The sling angle must not be less than 45°, and where possible, should be less than 60°.

Note:
For larger baying combinations, we recommend the use of a transport base/plinth, see page 842.

Baying for transport



When transporting bayed enclosures

7 Baying bracket for TS/TS

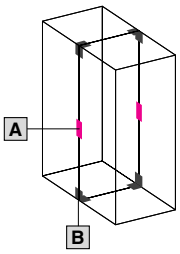
8 Baying bracket for TS/TS and for TS/PS

Note:
- In addition, the outer baying connector (see page 864), can be used.
- When transporting large, heavy enclosure combinations by crane, we additionally recommend the use of combination angles TS 4540.000, see page 866.

Also required:

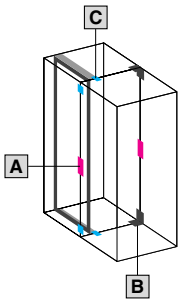
For protection category IP 55: One connector/clamp is required half-way up the enclosure height, see page 863.
Baying clamp, see page 863 – 864.

Notes on the transport of bayed enclosures, see page 864.



A 2 quick-fit baying clamps **TS 8800.500** (see page 863).

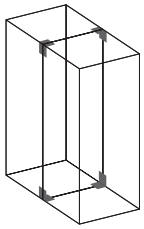
B 4 baying brackets **TS 8800.430** (see page 865).



A 2 quick-fit baying clamps **TS 8800.500** (see page 863).

B 2 baying brackets **TS 8800.430** (see page 865).

C 4 baying brackets **TS 4582.500** (see page 865) if the angular baying brackets cannot be fitted in the foremost installation position due to installed equipment such as large swing frames.



7 Angular baying brackets

for TS/TS

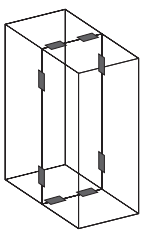
The robust connection when transporting bayed enclosure suites.

Screw-fastening may be optionally
- Horizontally and vertically with 8 screws
- Horizontally with 2 screws and M8 threaded blocks, vertically with 4 screws.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
4	8800.430



8 Baying brackets

for TS/TS and TS/PS

For additional stabilisation, or in cases where:
- Mounting plate brackets
- Swing frames
- Busbar supports

prevent the installation of angular baying brackets.

Material:
Sheet steel, zinc-plated, passivated

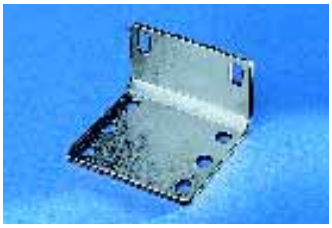
Supply includes:
Assembly parts.

Packs of	Model No. TS
4	4582.500

Accessories:

For mounting on the vertical TS enclosure section: Snap-on nut M8, TS 8800.808, see page 931.

Baying



Angular baying brackets

The alternative to baying bracket TS 4582.500 and for individual interior installations.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Screws M8 x 16 mm.

Packs of	Model No. PS
4	**4582.000**

Also required:

For mounting on:
horizontal TS enclosure section
Captive nut/threaded block M8, see page 936,
vertical TS enclosure section
Snap-on nut M8, TS 8800.808, see page 931.

Combination angle

For optimum distribution of tensile forces during transportation of bayed enclosures by crane.

Material:
Sheet steel, zinc-plated, passivated

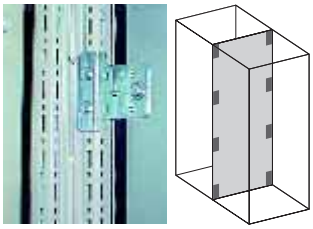
Supply includes:
Assembly parts.

Packs of	Model No. TS
4	**4540.000**

Accessories:

Baying cover,
see page 867.

Notes on the transport of bayed enclosures,
see page 864.



Baying attachment, vertical

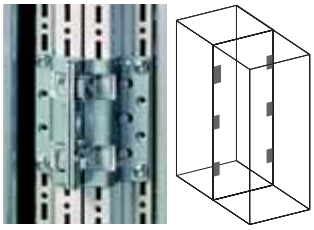
for TS/TS with divider panel
Only suitable for mounting in conjunction with the angle brackets of the divider panel (included with the supply).

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
8	**8800.470**

Note:
May also be used for side or wall attachment/ fastening of enclosures. In such cases, additional holes must be drilled in the side or rear panel.



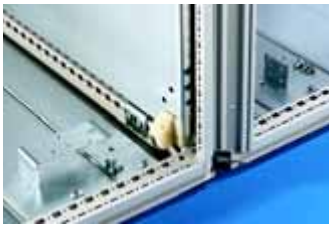
Baying attachment, vertical

for TS/TS
For baying two populated enclosures on the vertical enclosure section.
Simply locate into the vertical TS punchings, secure and connect both brackets by using the hex screws (supplied loose).
Using the fastening bolts, the enclosure is pulled into a defined end position, with a height or side offset of up to ±2 mm.

Packs of	Model No. TS
6	**8800.670**

Material:
Sheet steel 3 mm, zinc-plated, passivated.

Supply includes:
Assembly parts.



Baying clamp, horizontal

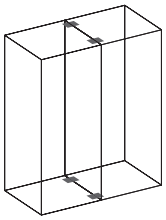
for back-to-back mounting
Two-piece, for in situ assembly of enclosures with mounting plate in the rearmost installation position.

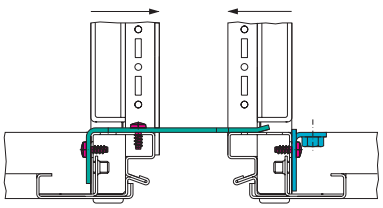
Material:
Sheet steel, zinc-plated, passivated

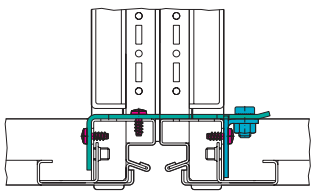
Supply includes:
Assembly parts.

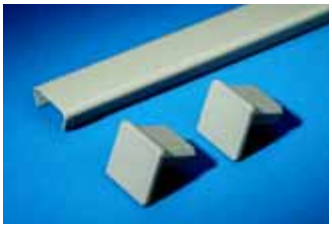
Packs of	Model No. TS
4	**8800.170**

German patent no. 10 157 979









Baying cover, top

A cover with two end caps may additionally be clipped over the seal between the two enclosures. This prevents dirt and liquid from collecting on the baying seal.

Material:
Cover section: Sheet steel, spray-finished or stainless steel 1.4301
End caps: Plastic

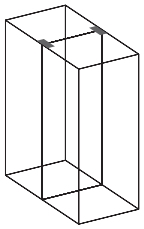
German patent no. 197 37 667
US patent no. 6,312,068
European patent no. 10 12,935
with validity for FR, IT

Note:
May also be fitted in the width with enclosure suites bayed back-to-back.

May also be used in conjunction with dust guard trim, see page 900.



Baying connector, external

for DK-TS/DK-TS with side panels
For retrospective baying of enclosures with side panels.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Packs of	Model No. DK
4	**7824.540**

Compensating panel

for TS
The panel is screw-fastened to the outside of the enclosure frame and serves as an infill panel when baying 2000 mm high enclosures of varying depths.
No seal between the enclosures.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Baying kit

for TE
For connecting individual enclosures into bayed suites at the sides. The enclosures are connected between the base and roof frame.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. TE
1 set	**7000.640**

TS 8 corner enclosures

TS 8 corner enclosures

The corner enclosure and the supplied components will accommodate the various baying options of the TS 8 frame on all outer surfaces. Fitted with a rear panel and an asymmetrical side panel (see page 854, mounted on the l/h (left hand) side), the corner enclosure also permits the option of baying in both the width and depth. The gland plates are aligned parallel to the rear panel. In TS 8 enclosures with a footprint outline, the gland plates may also be rotated through 90°. The baying system is identical to all other TS 8 enclosures.

Material:
Sheet steel, 1.5 mm

Surface finish:
Dip-coat primed, powder-coated on the outside in textured RAL 7035
Gland plates: Zinc-plated

Supply includes:
Enclosure frame with roof, rear panel (on the longest side), asymmetrical side panel, gland plates (divided lengthwise).

Note:
Enclosure without door (TS 8806.512),
see page 149.

Accessories:

Lock system,
see page 881.

Variable door concept

Instead of an enclosure door in a 600 mm/ 800 mm wide and 1800 mm/2000 mm high TS enclosure, climate control doors with integral cooling module may be retrofitted without major assembly work.

Possible alternative:

Climate control doors,
see page 584.

Trim frame

for TS

To conceal the TS 8 front frame in enclosures without a door.

Possible application areas include, for example:
- Studio technology
- Electronic configuration

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

For enclosures		Model No. DK
Width mm	Height mm	
600	2000	**7824.130**
800	2000	**7824.132**

Note:
The trim frame conceals the system punchings in the inner mounting level. The TS punched sections with mounting flange 23 x 73 mm (see page 922) may be used for installation.

Profile blanking frame

for TS

On request, all enclosures in the TS 8 series (see page 138) may be manufactured with a fitted profile blanking frame (design to match the TS glazed door) instead of door(s). For optimum access to installed equipment, trim frame hinged on the right, held by a mechanical snap fastener on the left.

Material:
Extruded aluminium section, die-cast zinc corner pieces, powder-coated

Colour:
RAL 7035

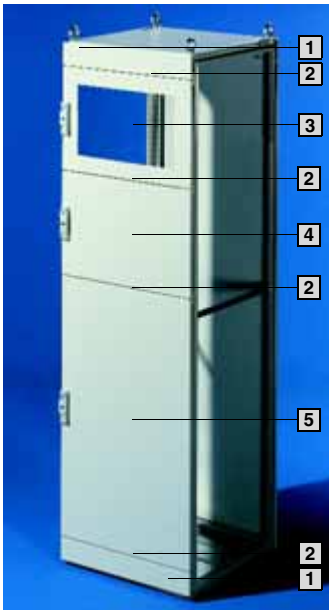
Modular front design for TS 8



Modular front design

for TS 8606.512
WHD 600 x 2000 x 600 mm,
for TS 8806.512
WHD 800 x 2000 x 600 mm
(see page 149)
and all other 600 and 800 mm wide TS 8 enclosures instead of a door or rear panel, insofar as the modular front is positioned in a suite between two enclosures with normal doors. If positioned as a free-standing enclosure or at the end of an enclosure suite, special side panels such as TS 8106.512 (see page 876) are required.
The partial doors with and without viewing panels can be arbitrarily combined with cross members. A trim panel and a cross member are each required a the top and bottom.
The requirements for you individual front design and the considerations which must be taken into account are illustrated on the sample configuration opposite.

Protection category:
With a completed enclosure
IP 55 to EN 60 529/10.91, NEMA 12 is met.

Also required:

1	Trim panels, height 100 mm or trim panel, hinged at the top, height 300 mm
2	Cross member

Accessories:

3	Partial door with viewing window, height 400 mm
4	Partial door without viewing window, height 400 mm
5	Partial door without viewing window, height 1000 mm

1 Trim piece, hinged at the top

for TS
For the installation of control and display components.

Material:
Sheet steel, 2 mm

Supply includes:
Hinges, cam locks with double-bit insert and assembly parts.

Note:
Not in combination with top-mounted module for TS (see page 900).

Side panels for Modular front design

for TS
Attachment on the inside vertical enclosure frame member.
The TS 8106.235 side panel retainers (page 853) could conflict with the partial door fasteners.

Material:
1.5 mm sheet steel

Surface finish:
Dip-coat primed, powder-coated on the outside
Textured RAL 7035.

Protection category:
IP 55 to EN 60 529/10.91

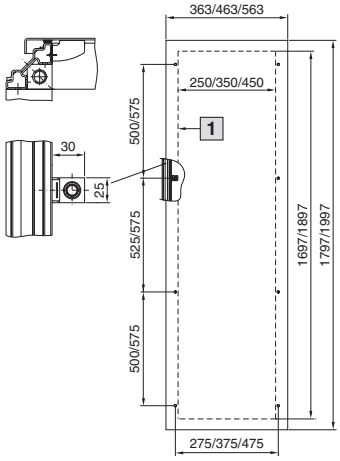
Supply includes:
2 side panels,
16 retainers with automatic potential equalisation.

Note:
Can also be used in enclosures without modular front design!

1 Usable interior area

For enclosure		Model No. TS
Height mm	Depth mm	
2000	600	**8106.512**
2000	800	**8108.512**

For RAL 7032 design, use order extension .212.
Delivery times on request.



Support stay

for trim panel, hinged at the top
5 pitch pattern positions up to a maximum opening of approx. 85°.

Material:
Sheet steel, zinc-plated, passivated.

Packs of	Model No. TS
2	**8801.260**

System windows

To conceal display and operating instruments or cutouts, and to protect against dirt and liquids as well as unauthorised access.

Consisting of the following components:

1. Base frame:
- Easily screw-fastened to the door thanks to modified dimensions (tubular door frame may be used as a drilling template).
- Readily height-adjustable.
- Stabilises the door cutout.
- Conceals the cut edge.
- The rain canopy
  – prevents dirt from landing on the seal,
  – protects the glass from being lifted out,
  – prevents the ingress of dirt and moisture when opening the window.

2. Viewing window:
- Made from single-pane safety glass:
  – high level of resistance to solvents and scratches,
  – anti-static,
  – reduced risk of injury if broken.
- Integral cam lock with double-bit insert, easily exchanged for all standard lock inserts and semi-cylinders in the Ergoform-S lock system (not with FT 2735.500 and .560).
- Hinge with 180° opening angle, easily inserted.

Material:
System windows:
Extruded aluminium sections with die-cast zinc corner pieces and single-pane safety glass.

Surface finish:
Base frame:
powder-coated in RAL 7035.
Hinge and lock section:
natural anodised.

Protection category:
IP 54 to EN 60 529/10.91.

Security lock insert no. 3524 E	**2467.000**[1)]
Push-button insert	**2468.000**
Lock and puch-button inserts, Lock no. 2123 E; No other lock is possible	**2469.000**[1)]

[1)] with 2 keys

Comfort handle

Prepared for ASSA lock system.
Length: 302 mm.

Design	Model No. TS
RAL 7032	**8611.050**
RAL 7035	**8611.280**

Also required:

Handle adaptor for mounting on a TS glazed door, PC-TS bottom door, IW designer door, see page 869.

Security handle

with code

Flexible access opportunities with

- individual 3-digit code without key
  or
- with the master key function via an additional semi-cylinder of 40 or 45 mm to DIN 18 254, irrespective of the code.

Design with	Model No. DK
Comfort handle TS, FR(i)	**7200.800**
Ergoform-S handle	**7200.810**

Accessories:

Lock and push-button inserts,
see page 882.

Adjacent door locking

for TS, CL

For optimum operation of the adjacent door from the outside if the handle on the inside is difficult to access due to swing frames or 482.6 mm (19″) installed equipment. Retrospective conversion of the adjacent door is easily achieved using the supplied drilling template.
The handle on the inside is no longer required.

Supply includes:
Assembly parts.

Packs of	Model No. TS
1	**8611.370**

Accessories:

Standard double-bit lock insert may be exchanged for 27 mm lock inserts, version A,
see page 888.

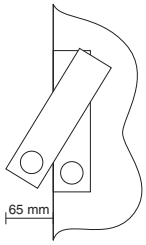
Swivel handle

for sheet steel door TS, CL

With lock insert, lock no. 3524 E.
The use of semi-cylinders is not possible.
Length: 150 mm.

Note:
When used in a bayed enclosure suite, the hinges must be on the same side.

Design	Model No. DK
RAL 7035	**7829.300**



Lock systems

Locking bar latch to CNOMO[1)]

To fit all locking bars in TS doors and glazed doors with standard lock or comfort handle.
The latch prevents the locking bars from moving when the door is open.
For mounting on the bolt of the bar guide.

[1)] CNOMO is a specification by the French automobile industry. For safety reasons, it must not be possible to lock the handle whilst the door is open.

Packs of	Model No. TS
10	**8611.210**

Also required:

For CNOMO[1)]
6.5 mm triangular insert TS 8611.220,
see page 881.

Spring washer

When dismantling the TS or CL locking rods the spring washers cannot be used again.

Material:
Spring steel, zinc-plated, passivated

Packs of	Model No. TS
100	**8800.070**

Assembly tool

for spring washers
For simple pressing-on of the spring washers via inlet ring magnets.

Packs of	Model No. TS
1	**8800.270**

Mini-comfort handle

for use in all 3-part EL enclosures
Prepared for the installation of lock inserts and for the installation of commercially available 40 or 45 mm semi-cylinders, and of lock and push-button inserts.

Material:
Die-cast zinc

Colour:
RAL 7035

Design	Model No. DK
For lock inserts[1)]	**7705.110**
For semi-cylinder[2)]	**7705.120**

Accessories:

[1)] Lock inserts,
see page 881.
[2)] Lock and push-button inserts,
see page 882.

The Ergoform S lock system

The unlocked handle folds down forwards and is swivelled to open the lock.

Material:
Die-cast zinc

Surface finish:
Powder-coated

Ergoform standard

Prepared for the installation of semi-cylinders with a total length of 40 or 45 mm (to DIN 18 254) and all 27 mm lock inserts, version A, see page 888.

Cam locks

Housing made of die-cast zinc, nickel-plated

	Model No. SZ
With double-bit insert[1)]	**2520.000**
With lock insert, lock no. 3524 E	**2530.000**

[1)] exchangeable for lock inserts, Version C, see page 888.

Housing of fibre-glass reinforced polyamide, also as a replacement for compact enclosures AE.

	Model No. SZ
With double-bit insert[1)]	**2420.000**
With lock insert, lock no. 3524 E	**2430.000**

[1)] exchangeable for cylinder inserts, Version B, see page 889 and 27 mm lock inserts, version A, see page 888.

Housing of fibre-glass reinforced polyamide, also as a replacement for compact enclosures AE.

With lock no. E1.
Only for use with **VW, SEAT, Audi, Skoda Auto.**
Supplied without key.
Other lock systems available on request.

Colour	Model No. SZ
RAL 7032	**2540.000**
RAL 7035	**2540.500**

Entirely of stainless steel 1.4301.
For AE compact enclosures, stainless steel (with cam lock).

	Model No. SZ
With double-bit insert	**2304.000**

Stainless steel design 1.4404 (AISI 316L) available on request.

Lock inserts

Note:
The universal lock systems allows the installation of a suitable handle to suit almost any application or customer specification. The relevant product ordering page shows which handles can be fitted into each particular assembly.

Lock systems

Lock cover

for padlocks or multiple locks
For retrospective mounting on all compact enclosures AE, of sheet steel and with cam lock.

Material:
Die-cast zinc, nickel-plated, passivated

Packs of	Model No. SZ
1	**2493.000**

Multiple lock

for 6 cam locks
The the ideal solution in cases where individual access for several persons is required for maintenance and repair purposes.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. SZ
2	**2493.500**

Lock cover

prepared for lead seal
For all enclosure types with Rittal-specific locks, such as AE, EB and AP.

Material:
Polyamide

Colour	Packs of	Model No. SZ
RAL 7035	2	**2476.000**

German registered design no. M 92 07 062

Security lock

Fitted to doors, to protect against contact with live electrical equipment whilst the main switch is ON.

Function:
- Locks the door when the main switch is ON.
- Mains power (voltage) is only enabled whilst the door is closed.
- Monitoring of the lock magnet via an additional closing contact.

Supply includes:
Lock, actuator, angle bracket, assembly parts.

Connection voltage for lock magnet	Model No. SZ
230 V AC 11 VA	**2416.000**
24 V DC 8 W	**2418.000**
120 V AC 8 VA	**2419.000**

Also required:

For twin-door enclosures (for the overlapping door, for the message “enclosure door closed”), Rittal door-operated switch PS 4127.000, see page 956.

Enclosure key

For lock inserts (one double-bit key is supplied with every enclosure).

Design	Model No. SZ
Double-bit key no. 5	**2531.000**
Security key no. 3524 E	**2532.000**
7 mm triangular	**2545.000**
8 mm triangular	**2546.000**
7 mm square	**2547.000**
8 mm square	**2548.000**
Daimler key	**2521.000**
Fiat key	**2308.000**

Universal enclosure key

Double-bit, 8 mm square, 8 mm triangular (also for 7 mm inserts), with integral screwdriver.

Packs of	Model No. SZ
1	**2549.000**

Spare key

for QuickBox/FR(i)

Spare key for standard lock no. 12321.

Packs of	Model No. QB
2	**7526.050**

Quick-release fastener

for QuickBox

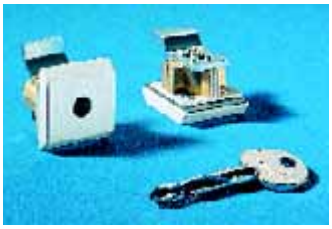
The quick-release fastener provides optimum access, even when used in problem areas. To facilitate locking, the quick-release fastener is screw-fastened to the mounting bracket at the front. This enables the QuickBox to be locked even when the fasteners of the sides are opened, allowing the enclosure cover to be attached and removed easily.

Packs of	Model No. QB
2	**7502.220**

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Supply includes:
2 mounting brackets, mounting material and quick-release fasteners



Lock “15”

For retro-fitting in all FM/fibre-optic small distributors (Zeiss-Ikon “15”).
For cross-bit keys.

Colour:
RAL 7035

Lock	Packs of	Model No. DK
“15”	2	**7059.035**

Extended delivery times.

Key “15”

Cross-bit key for security lock (Zeiss Ikon “15”).
Two keys are required for a small distributor.

Key	Packs of	Model No. DK
“15”	1	**7059.100**

Extended delivery times.

Lock systems

1

Door locking for bayed suites

For extending the door locking of **commercially available main switches** to bayed suites TS. Adjacent door cannot be opened until the main door has been opened.

The main switch can be positioned anywhere in the suite; its function is independent from the door hinge position.
Subsequent locking of the adjacent doors in the suite is possible: they are thus automatically included in locking operation.

2

1 Operating mechanism
(Fitted in the enclosure with main switch and additionally in every fourth adjacent enclosure)

	Model No. TS
Operating mechanism	**4912.000**

2 Adjacent door locking
(Installation in adjacent enclosure)

	Model No. TS
Adjacent door locking	**4911.000**

3

3 Interconnecting rods
To extend locking from the main enclosure to the adjacent enclosures of a bayed suite. An interconnecting rod corresponding to the width of the enclosure is required for each adjacent enclosure.

For enclosure width mm	Packs of	Model No. TS
600	10	**4916.000**
800	10	**4918.000**
1200	10	**4920.000**

Isolator door locking (USA version)

For safety locking of enclosures and bayed suites according to USA specifications, only in conjunction with **the following types of main switches:**

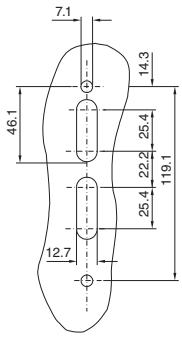
- Allen Bradley 1494 V-H1 (actuating lever)
- Square D 9422 A1
- ITE Siemens Max-Flex series/FHOH (only available in the USA)
- General Electric TDA Typ 1 and 2.

For assembly, a main door lock plus adjacent cubicle latch mechanisms are required, together with interconnecting rods to match the bayed enclosures.

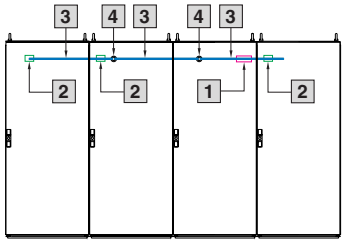
Note!
On configuration of bayed suites, it must be noted that the isolator main enclosures can only be attached to the right side (USA version).

Main door locking	Model No. TS
for TS	**8611.310**

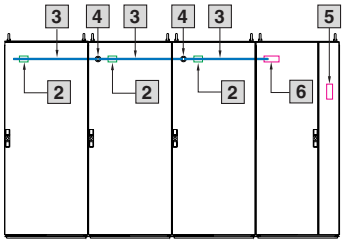
Cutout for main switch



Door locking for TS bayed suites (commercially available main switches)



Isolator door locking (USA version)



1 Operating mechanism, installation in enclosure with main switch

2 Adjacent door locking, installation in adjacent enclosure

3 Interconnecting rod

4 Connection component (included in the supply of interconnecting rod)

5 Main door lock (for isolator door locking, USA version)

6 Operating mechanism, installation in the main enclosure (included in the supply of the main door lock pos. 5)

Hinges 130°

for ES
For retrofitting a sheet steel door instead of the rear panel.

Material:
Die-cast zinc

Supply includes:
Assembly screws.

Packs of	Model No. PS
6	**4190.000**

Note:
Lock components for frame should be ordered separately:

Packs of	Model No. ES
8 sets	**4167.000**

Hinges 130°

for TS
For retrofitting a sheet steel door instead of the rear panel.

Material:
Die-cast zinc

Supply includes:
Assembly screws.

Packs of	Model No. TS
4	**8800.020**

Also required:
Lock components for frame TS 8800.040,
see page 869.

Hinges 180°

for TS, CL
For retrospective conversion of sheet steel doors with 130° hinges.

One-man assembly:
- Exchange the hinge parts on the frame side for 180° hinges (4 screws).
- Drill the door at the pre-marked points.
- Screw-fasten the hinge parts onto the door.
- Locate the door.
- Press in the captive hinge pins.

Material:
Die-cast zinc

Supply includes:
Assembly screws.

Version	Packs of	Model No. TS
RAL 7035	4	**8800.190**
RAL 7032	4	**8800.030**
RAL 8019	4	**8800.230**
Matt nickel-plated	4	**8701.180**

Note:
Door assemblies such as the comfort handle may restrict the door opening angle.

The hinge pins may only be actuated and the door removed with the door open.
The hinge cannot be dismantled from the outside with the door closed (access protection).

Hinges 180°

for TS bayed enclosure suites with comfort handle
In TS bayed enclosure suites with comfort handle for semi-cylinder, the following door opening angles may be achieved:
Sheet steel door: max. 180°
Glazed door: max. 140°

Material:
Die-cast zinc

Colour:
RAL 7035/RAL 9005

Supply includes:
Assembly screws.

Version for	Packs of	Model No. TS	
		RAL 7035	RAL 9005
Sheet steel door	4	**7824.520**	**7824.522**
Glazed door	4	**7824.525**	–

Note:
- The protection category of the enclosure may be reduced.
- Not for divided doors.
- Door hinge remains the same within a bayed enclosure suite.
- Not suitable for use with TS designer glazed doors.

Rear panel bracket

For:
- Premium Panel
- Premium Line KL, from height 200 mm

For fitting on the inside, so that there are no exterior surfaces where substances could accumulate and pose a potential threat to hygiene. Holds the rear panel against the enclosure when it is flipped down; easily removed if required.

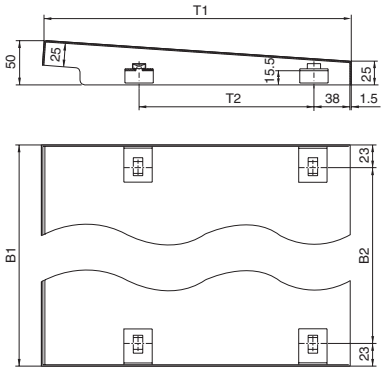
Rain canopies

for AE
Reliable protection for outside siting – with water run-off to the rear. Easily retro-fitted.

Supply includes:
Assembly parts.

Note:
For outdoor siting, we generally recommend a rain canopy above the enclosure or the gap between the door or screw-fastened rear panel and the enclosure, in order to protect against water and UV radiation.
The tests of IP protection categories for water protection (2nd code number to EN 60 529) cannot be compared with an enclosure sited outdoors or under similar conditions.
Upon request, rain canopies of sheet steel, stainless steel or aluminium can also be produced for other enclosures.



B = Width
T = Depth

Accessories:

Condensate discharge,
see page 852.

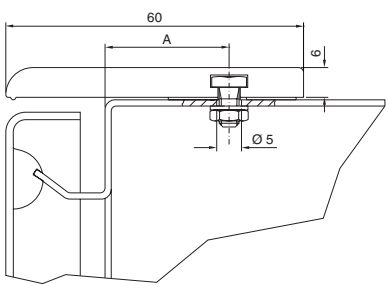
Dust guard trim

for AE, AK, EB, KL and BG
To protect against deposits on the upper edge of the door and between the enclosure and the door/lid. Cut the door protection strip to length according to the enclosure width. Drill the enclosure and mount the strip using the adhesive strips and screws.

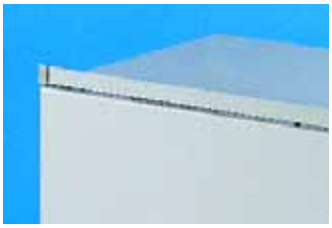
Material:
Plastic, UV-resistant

Colour:
Similar to RAL 7024

For enclosure	Length mm	A mm	Model No. SZ
AE	1200	25	**2426.500**
AK		15	
KL, EB, BG		20.5	



Roof



Dust guard trim

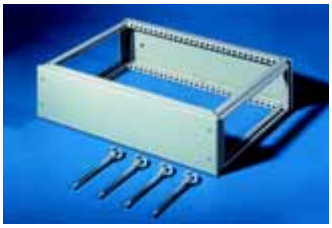
for TS, ES, FR(i)
To protect against dust deposits on the upper edge of the door and between the door and upper horizontal enclosure section. The dust guard trim provides space to accommodate texts or company logos.

Colour:
RAL 7035

Supply includes:
Clear plastic strip for text labels (Height 29.5 mm).

Length mm	Model No. SZ
600	**2424.100**
800	**2425.100**
1000	**2427.100**
1200	**2426.100**

Note:
Also suitable for use in conjunction with baying cover top,
see page 867.



Top mounting module

for TS, FR(i)
As a cable chamber for cable infeed from above or for power distribution with busbar systems across bayed enclosures. The TS cover plate is used as standard to finish off at the top. The enclosure height is increased by 200 mm with the top mounting module fitted.
The top baying cover cannot be fitted. Installation accessories for top and bottom, see diagram and explanations below.

Material:
Sheet steel, 1.5 mm

Surface finish:
Spray-finished in textured RAL 7035/RAL 7032

Protection category:
IP 55 to EN 60 529/10.91
Complies with NEMA 12
(in conjunction with side panel for top mounting module, see page 901).

Roof plate

for cable entry, two-piece
for TS, FR(i)
In exchange for the standard roof. Equipped with a sliding angular bracket in the rear section. Rubber cable clamp strip on both sides for attaching cable bundles and bunched cables.
Thanks to the symmetrical design of the TS 8 frame, side cable entry can also be achieved by rotating the roof plate.
The two-piece design additionally allows easy retro-fitting, by simply removing the front part of the plate for retrospective cable entry.
For active ventilation, a fan mounting plate may be fitted in the front section of the enclosure (only for TS, not in conjunction with the 482.6 mm (19″) mounting frame). To this end, the roof plate must be raised by at least 20 mm with spacers.

Material:
Sheet steel

Colour:
RAL 7035

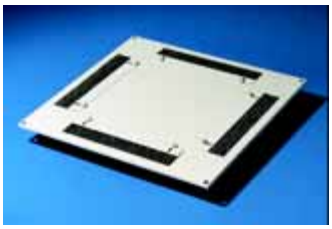
Detailed drawing,
available on the Internet.



Roof plate

for cable entry on all sides
for TS, FR(i)
The roof plate has sliding plates for cable entry on all four sides, and therefore allows individual selection of cable routing tailored to the specific requirements. After cable entry, the sliding plate is closed again as far as possible, and the rubber cable clamp strips supplied loose then seal the cable entry area.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

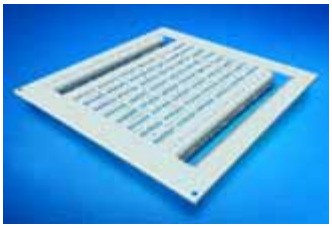
Roof



Cable management roof plate

for TS, FR(i)
In exchange for the standard roof plate. Thanks to the rounded side cutouts, large quantities of cables may be routed into the rack whilst preserving the bend radii. The roof has system punchings for the attachment of cables with nylon tape or cable ties.

Material:
Sheet steel

Colour:
RAL 7035

For enclosures		Model No. DK

Roof plate, vented

for TS, FR(i)
In exchange for the standard roof.

Variant 1:
72 mm high roof plate, all-round vent slots, optionally with clamp strip for cable entry. The two-piece design with cable entry allows easy retro-fitting, by simply removing the front part of the plate. The cables are held in position via a guide at the side.

Material:
Sheet steel

Colour:
RAL 7035

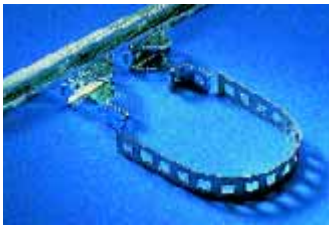
For mounting on a wall or panel.

Material:
Stainless steel 1.4301

Packs of	Model No. CS
4	**9765.120**



Pole clamp

For reliable, convenient fastening to round or square poles.

For pole diameter/size:
Ø from 40 to 190 mm
□ from 50 to 150 mm

Material:
Mounting angles, clamping section:
Sheet steel, zinc-plated, passivated
Clamping strap: Stainless steel 1.4301

For KL, EB, BG, AE, KS

Supply includes:
2 mounting angles, 600 mm long,
4 clamping sections,
2 clamping straps,
4 clamping brackets,
4 screws and nuts M8
for attachment to the enclosure.

Packs of	Model No. SZ
1 set	**2584.000**

For CS wall-mounted enclosures

Supply includes:
4 clamping sections,
2 clamping straps,
4 clamping brackets.

Packs of	Model No. CS
1 set	**9765.125**

Enclosure connectors

adjustable
Between Command Panels, terminal boxes, compact enclosures
and
horizontal or vertical surfaces.
Pre-mount the connector halves on both sides, screw together and secure with a locking screw, and/or adjust the angle of rotation.

Rotation range:
±105° with 7.5° stepped increments.

Material:
Die-cast zinc, powder-coated

Colour:
RAL 7035

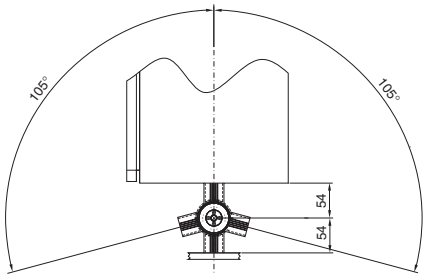
Supply includes:
Assembly parts for both sides.

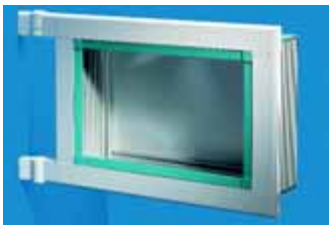
Packs of	Model No. CP
1 set	**6016.200**

Note:
The locking screws may be exchanged for standard, commercially available clamping levers (M10 x 50 mm).

Also required:

Cross-brace for door,
see page 895.





Frame connector

adjustable
Between the Command Panel VIP 6000 with wide front frame
and
horizontal or vertical surfaces.
Pre-mount the connector halves on both sides, screw together and secure with a locking screw, and/or adjust the angle of rotation.

Rotation range:
±105° with 7.5° stepped increments.

Material:
Die-cast zinc, powder-coated

Colour:
RAL 7035

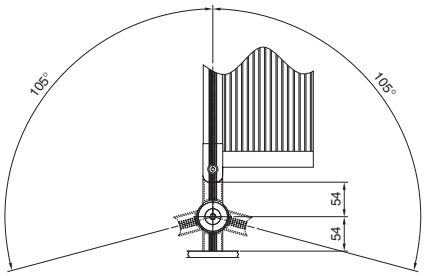
Supply includes:
Assembly parts for both sides.

Packs of	Model No. CP
1 set	**6016.100**

Note:
The locking screws may be exchanged for standard, commercially available clamping levers (M10 x 50 mm).

Also required:

Cross-brace for door,
see page 895.



Wall mounting

Wall mounting bracket

vertically hinged
Between the Compact Panel
and
horizontal or vertical surfaces.

Rotation range:
180° adjustable on a 7.2° pitch pattern.

Material:
Wall mounting bracket: Sheet steel
Locking screw: Steel with plastic knurled handle

Supply includes:
Locking screw and assembly parts for mounting on the Compact Panel.

Packs of	Model No. CP
1 set	**6341.000**

Console

for wall mounting, for RNC
With space for optimum cable routing in the wall area.

Mounting plates

Mounting plate attachment

For additional clamping and to reduce potential vibration of the mounting plate. Select according to mounting position, installation type and enclosure.

Material:
Sheet steel, zinc plated, passivated

Supply includes:
Assembly parts.

For TS
Installation options:
- Side, at half height in conjunction with mounting plate infill
- In the penultimate position
- Set forward (supplied state)

Advantage:
No impairment to the mounting surface, but mounting is only possible from the enclosure rear.

Packs of	Model No. TS
10	8800.630

Accessories:

Mounting plate infill,
see page 912.

For TS
Installation options:
- Side
- Rear, flush with enclosure frame

Advantage:
No impairment to the mounting surface, but mounting is only possible from the enclosure rear.

Packs of	Model No. TS
10	8800.610

For TS
Installation options:
- Side
- Rear, flush with enclosure frame
- Set forward on a 25 mm pitch pattern

Advantage:
No impairment to the mounting surface.
May optionally used for attachment or screw fastening.

Packs of	Model No. TS
10	8800.090

Also required:

Punched section with mounting flange 17 x 73 mm for the inner mounting level,
see page 921 (with Fig. 3).

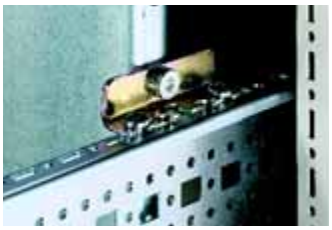
1

2

1 Mounting plate screw-fastened in the rearmost installation position.

2 Mounting plate screw-fastened from the rear in the rearmost installation position.

3 Mounting plate in a set forward position, either attached or screw-fastened (not shown).



3

For TS
Installation options:
- Side
- Rear, flush with enclosure frame

Slide over the plate at the side and secure with screws. Additionally, the mounting plate may be drilled and screw-fastened at the rear C-edge.

Packs of	Model No. TS
10	8800.050

Mounting plate attachment

For additional clamping and to reduce potential vibration of the mounting plate. Select according to mounting position, installation type and enclosure.

Material:
Sheet steel, zinc plated, passivated

Supply includes:
Assembly parts.

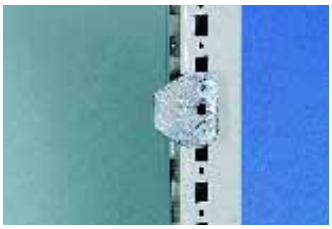
For TS, ES
Installation options:
- All-round
- Set forward on a 25 mm pitch pattern

Slide in between the bar and plate from below or above or from the side, and secure with screws.

Packs of	Model No. TS
10	4593.000

Also required:

Support strip (with TS for inner level), see page 924 or
punched section with mounting flange (with TS for inner level), illustration see page 921 or
punched rails and punched sections, see page 925.



For TS, ES
Installation options:
- On the top and bottom of the mounting plate (with ES all-round)
- Rear, flush with enclosure frame

Screw in the clip behind the plate and secure with screws.

Packs of	Model No. TS
10	4576.000

Installation kit

For mounting plates TS, back-to-back
Thanks to a minimum distance between the two mounting plates, a maximum installation depth is achieved for installed equipment on both sides.

Material:
Sheet steel, zinc-plated, passivated

Note:
Build height front and rear
with central installation =
(enclosure depth minus 48 mm) : 2
Example:
TS 8806.521 = Depth 600 mm
Build depth = 2 x 276 mm

Packs of	Model No. TS
1 set	8800.280

Rittal service:

Enclosures with 2 mounting plates (mounted in the centre unless otherwise specified) and door(s) on both sides may be ordered as complete units.
Model No.: TS 8xxx.521

Hinge attachment

for mounting plate TS, ES

In enclosures with width 600 and 800 mm.
Hinge pin with adjusting screws
– May be unlatched by hand for installation/ removal
– Secured via a screw

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
1 set	8800.810

Also required:

Two PS support rails according to the enclosure width, see page 927.

Mounting plates

Mounting plate infill

for TS
For a continuous mounting surface in bayed suites where the mounting plate is set forward.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure height mm	Model No. TS
1800	**4590.700**
2000	**4591.700**
2200	**4592.700**

Mounting plate adjustment bracket

for KS
Infinitely adjustable.
Other equipment can also be installed in this way, instead of the mounting plate.

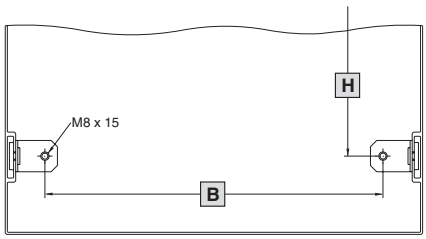
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosures KS	Packs of	Model No. KS
1423.600, 1432.600 1434.600, 1444.600 1446.600, 1448.600 1449.600, 1466.600 1467.600	4	**1481.000**
1453.600, 1454.600 1468.600, 1469.600 1479.600, 1480.600 1400.600	4	**1491.000**

B Enclosure width:
– 76 mm (KS 1481.000)
– 104 mm (KS 1491.000)

H Enclosure height:
– 150 mm



B = Width

Cross-brace for mounting plates

for TS, CL, ES
Additional horizontal rigidity for vibration resistance and/or stabilisation of wide mounting plates. This brace may also be used as an attachment aid for heavy components.

Material:
Sheet steel, zinc plated, passivated

Supply includes:
2 sections,
4 clamps,
4 grub screws M10 x 16 mm.

For enclosure width mm	Model No. TS
1200	**4333.120**
1600	**4333.160**
1800	**4333.180**

Other widths available on request.

Transport handles for mounting plates

for TS, CL, ES
Suitable for use in any position of the side C-fold.
Benefits include:
- Can be used by people of different heights
- Optimised force transmission
- Easy handling

Packs of	Model No. SZ
2	**2415.500**

Partial mounting plates

for TS, CL, CS Toptec

For

- Universal interior installation, also in conjunction with punched sections with mounting flanges and support strips. Defective assemblies are quickly and easily replaced
- Additional mounting levels

Partial mounting plates are fastened directly onto the vertical enclosure sections with the inner mounting level using the assembly parts supplied loose. In this mounting position (in both the width and the depth) they form one level with TS punched sections with mounting flanges 17 x 73 mm and TS support strips for the inner mounting level.

Material:
Sheet steel, 2.5 mm, zinc-plated, passivated

Supply includes:
Assembly parts.

Accessories:

TS punched section with mounting flange 17 x 73 mm for the outer mounting level, see page 921.
TS support strip, see page 924.
Hinge attachment, see page 914.
Self-tapping screws, SZ 2487.000, see page 937.
Adaptor for CS Toptec, width 650 mm, see page 916.

For installation in									Size mm	Packs of	Model No. TS

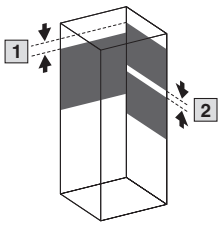
[1] Also suitable for installing in
- PC enclosures based on TS behind the lower front door
- IW enclosures, height 900 and 1000 mm

[2] In conjunction with adaptor CS 9765.195 may also be installed in 650 mm wide/deep CS Toptec, see page 916.

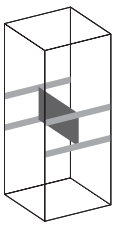


When **installing around corners** due to collision between the assembly components

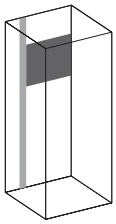
1 At least 75 mm (adjustable on a 25 mm pitch pattern).

Maximum space utilisation

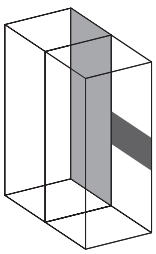
2 1 mm (adjustable on a 25 mm pitch pattern).



Set forward installation position
Quickly and easily achieved wtih four TS punched sections with mounting flanges 17 x 73 mm for the outer mounting level, see page 921.



Partial installation
Partial utilisation of the enclosure depth or width is also possible. In this example, using a PS punched section without mounting flange 23 x 73 mm, see page 925.



Continuously flush
In bayed enclosures, the partial mounting plate is in the rearmost position flush with the standard mounting plate. This facilitates continuous component mounting.

Mounting plates

Hinge attachment

for partial mounting plate TS

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. TS
1 set	**8614.100**

Also required:

Depending on the installation position
1 Divider kit for swing frame, small,
for enclosure width
600 mm, Model No. SR 2377.860,
800 mm, Model No. SR 2377.880,
see page 994.
2 PS punched section without mounting flange
23 x 73 mm according to the enclosure depth,
see page 925.
Support brackets TS 8800.330,
see page 933.

Side installation:
In conjunction with hinge, for side panel,
see page 854, for an enclosure depth of
600 or 800 mm, side installation is identical to
installation parallel to the front.

Support rail, locatable

for TS, CM, CL, PC-TS

To fit:
- Internal mounting behind the mounting compartment, small, of the PC enclosure,
- Mounting on the vertical TS enclosure section,
- Mounting in CM, CL on a rail for internal installation.

Integral 25 mm pitch pattern of holes
To accommodate:
– Mounting plate, small
– PS punched section without mounting flange via support brackets PS
as a second mounting level if due to an installed:
– Mounting plate infill
– Cable duct, vertical
no punched sections or other assemblies can be mounted in the depth.

Static load: max. 15 kg

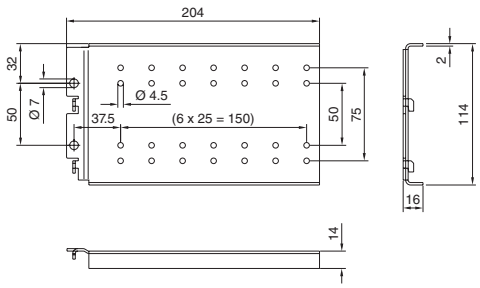
Material:
Sheet steel, 2.0 mm,
Zinc-plated, passivated

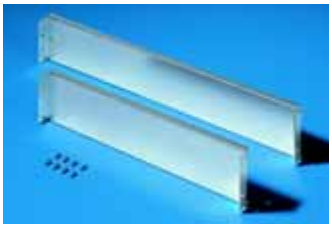
Supply includes:
Assembly parts.

Packs of	Model No. TS
1 set	**8612.200**

Accessories:

PS punched section without mounting flange, see page 925.





Mounting plate, small

For external mounting on:
- Support rail TS, locatable, depth-adjustable on a 25 mm pitch pattern,
- Punched sections with mounting flanges, attached to the outer mounting level.

Material:
Sheet steel, 1.5 mm,
Zinc-plated, passivated

Supply includes:
Assembly parts.

Enclosure width mm	Packs of	Model No. TS

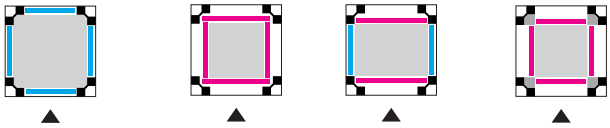
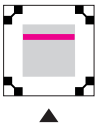
Overview of TS installation systems

Clearance width
Depending on attachment, the following values apply to the clearance between the mounting levels:
- Outer mounting level = Enclosure width and depth minus 42 mm
- Inner mounting level = Enclosure width and depth minus 88 mm

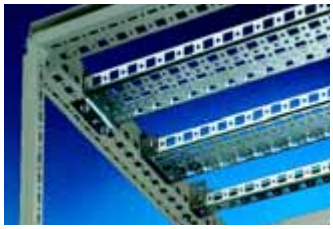


External level | Internal level | External and internal level | PS-compatible installation

Cover installation



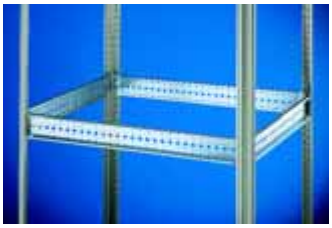
Installation with:
- PS punched section with mounting flange
- PS punched section without mounting flange
- PS punched rail in three mounting variants
- TS punched rails
- TS punched sections without mounting flanges
- TS punched sections with mounting flanges



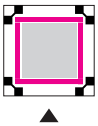
TS 8 rails for the outer level

- TS punched sections with mounting flanges
- TS mounting bar
- TS punched rail

Benefits:
- Largest clearance width
- May be installed directly, on one level all round



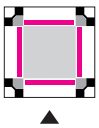
TS 8 rails, PS rail for the inner level



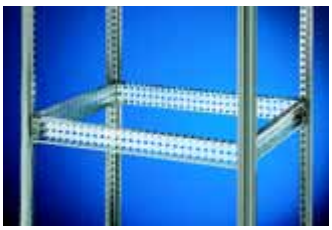
- TS punched sections with mounting flanges
- TS mounting bar
- PS punched section without mounting flange, with support bracket TS

Benefits:
- Use of a second level
- Height-offset mounting all-round

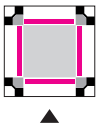
With adaptor rail for PS compatibility



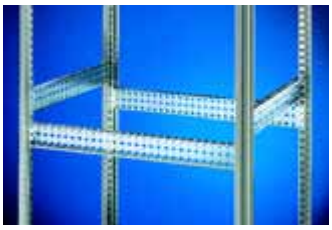
On one level all round with:
- PS punched section without mounting flange, with support bracket PS
- PS punched rail with angle bracket, mounting bracket or support bracket PS



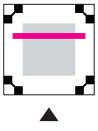
With adaptor rail for PS compatibility



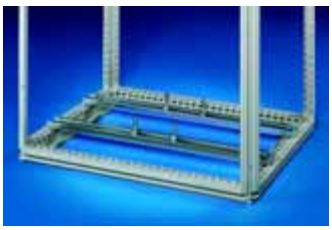
Height-offset in the width and depth with:
- PS punched section with mounting flange
- PS punched rail with mounting bracket
- TS punched rail

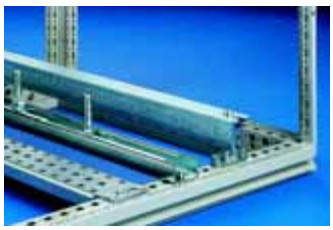


Base installation

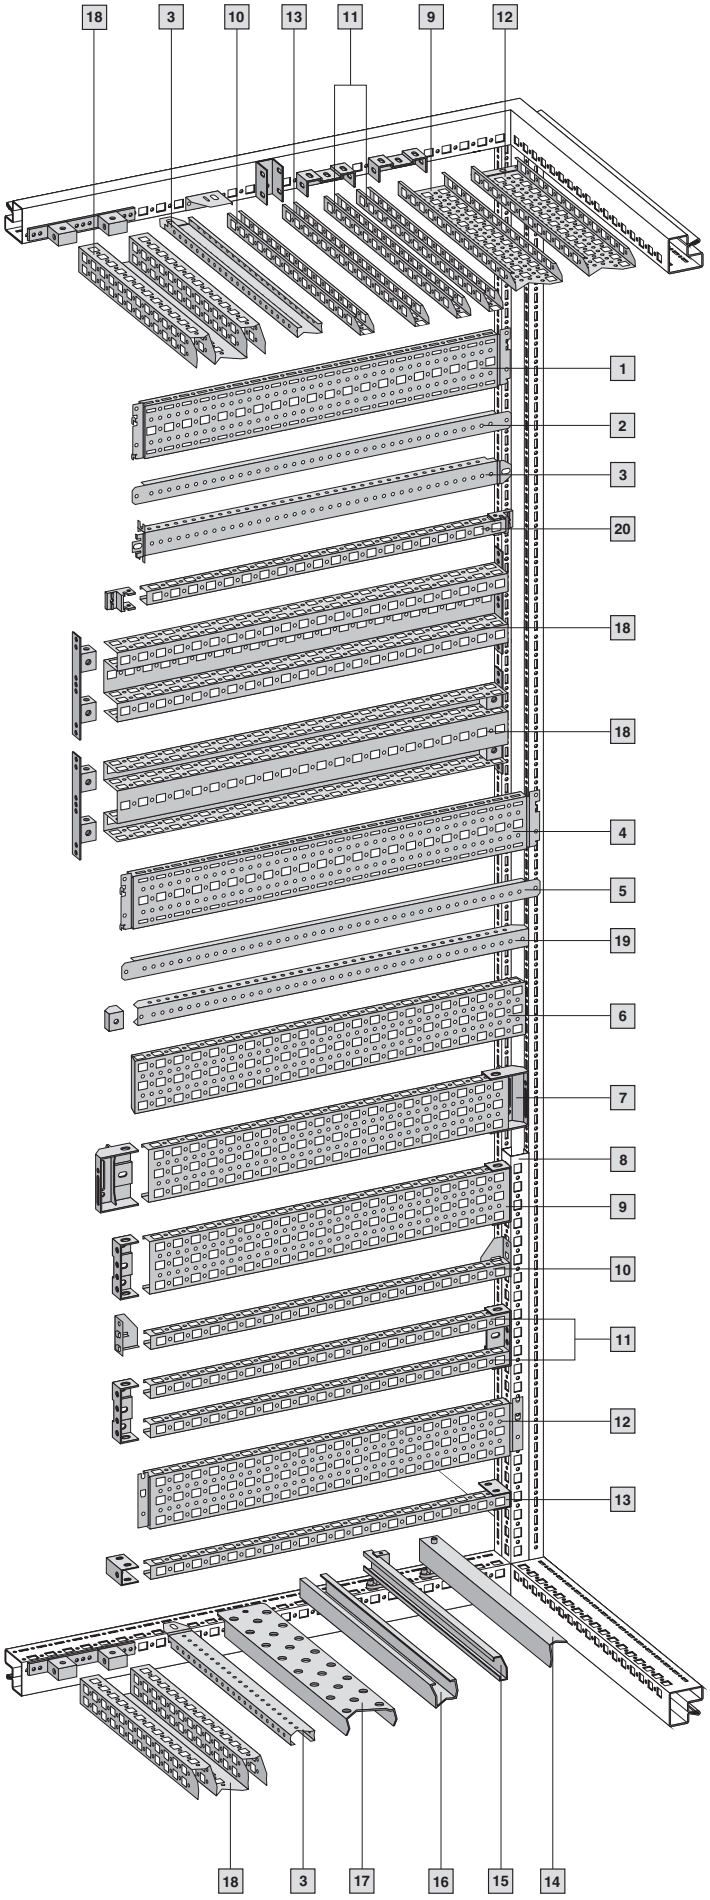


Installation with:
- Cable clamp rails
- C rails 30/15 with bracket/spacer
- System support rails
- Support rail
- TS punched rails





Rail systems



Cover installation

Punched sections and rails may be mounted on the horizontal enclosure sections in both the width and depth.

Installation accessories	Page
1 TS punched section with mounting flange, 17 x 73 mm for the outer level	921
2 TS support strip for the outer level	924
3 TS punched rail 18 x 38 mm[1] for the ● outer level ● horizontal enclosure sections ● adaptor rail for PS compatibility	923

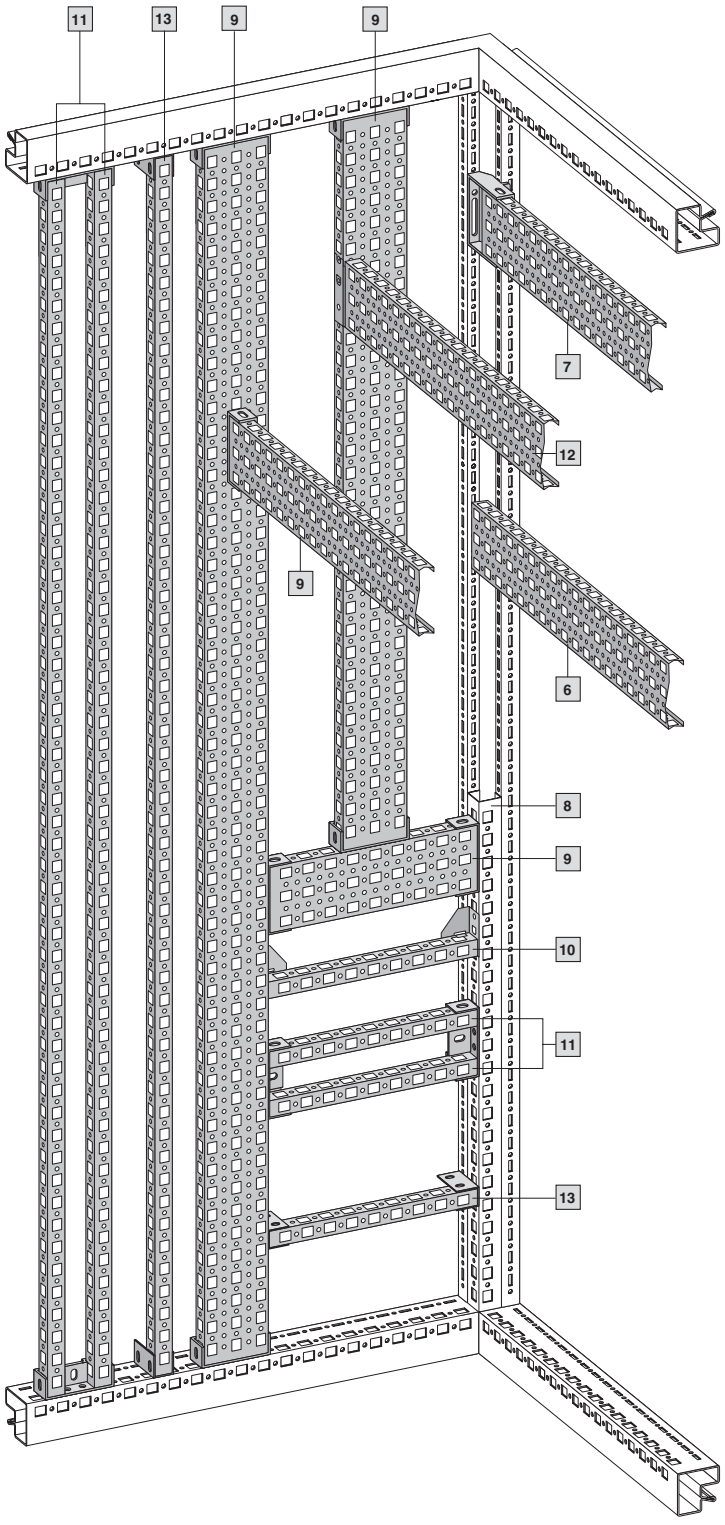
17 Support rail	927
18 TS punched sections without mounting flanges, 45 x 88 mm	922
19 TS punched rail 25 x 38 mm with snap-on nut	923
20 PS punched rail 23 x 23 mm with mounting bracket TS	925

[1] Two TS punched rails 18 x 38 mm are included in the supply of enclosures with a mounting plate. After installing the mounting plate, the TS punched rail may be inserted, as shown here.

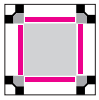
Base installation

Punched sections and rails may be mounted on the horizontal enclosure sections in both the width and depth.

Attachment may be made at any point in the TS 8 enclosure space. Not only with horizontal rail installations directly between the TS sections, but by combining vertical and horizontal rails, any given mounting level in the width, height and depth may be achieved.

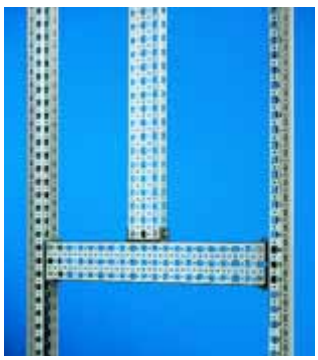


Vertical mounting levels – PS-compatible



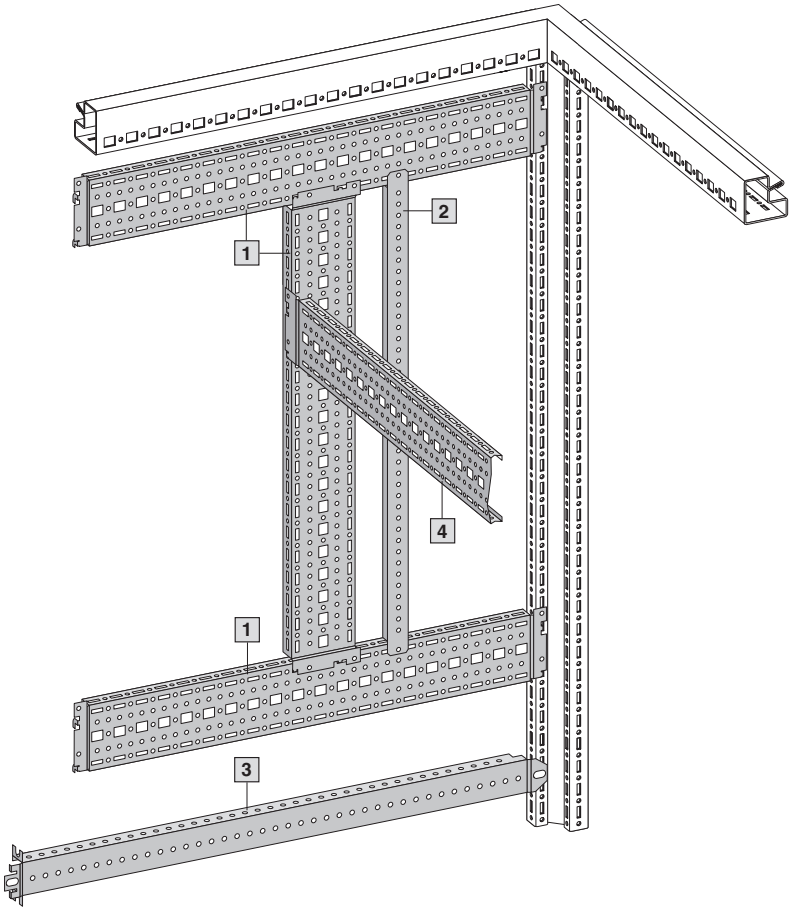
The basis for a second mounting level across the entire enclosure height is quickly achieved, e.g. with two PS punched sections without mounting flanges 23 x 73 mm **9.** Between these two sections, configuration may be achieved with PS punched rails **10, 11** and **13,** with PS punched sections without mounting flanges **9** and PS punched sections with mounting flanges **12.** When using the adaptor rail for PS compatibility **8,** installation is easily achieved across a suitable sub-height, or with suitable enclosure dimensions, across a sub-width or sub-depth.

Installation accessories (Consecutive numbering in accordance with diagram on page 918)	**Page**
6 TS punched section with mounting flange, 23 x 73 mm for the inner level	921
7 PS punched section without mounting flange, 23 x 73 mm with support bracket TS (alternatively with one or two punched rails 23 x 23 mm)	925
8 Adaptor rail for PS compatibility	924
9 PS punched section without mounting flange, 23 x 73 mm with support bracket PS	925
10 PS punched rail 23 x 23 mm with angle bracket	925
11 PS punched rails 23 x 23 mm with support bracket PS (alternatively with one or two punched rails 23 x 23 mm)	925
12 PS punched section with mounting flange 23 x 73 mm	926
13 PS punched rail 23 x 23 mm with mounting bracket PS	925



If PS punched rails or PS punched sections without mounting flanges are installed vertically on roof or base frames, a PS rail is also required for horizontal sub-division.

Rail systems

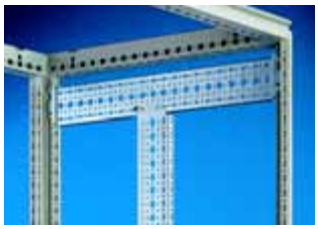


Vertical outer mounting level

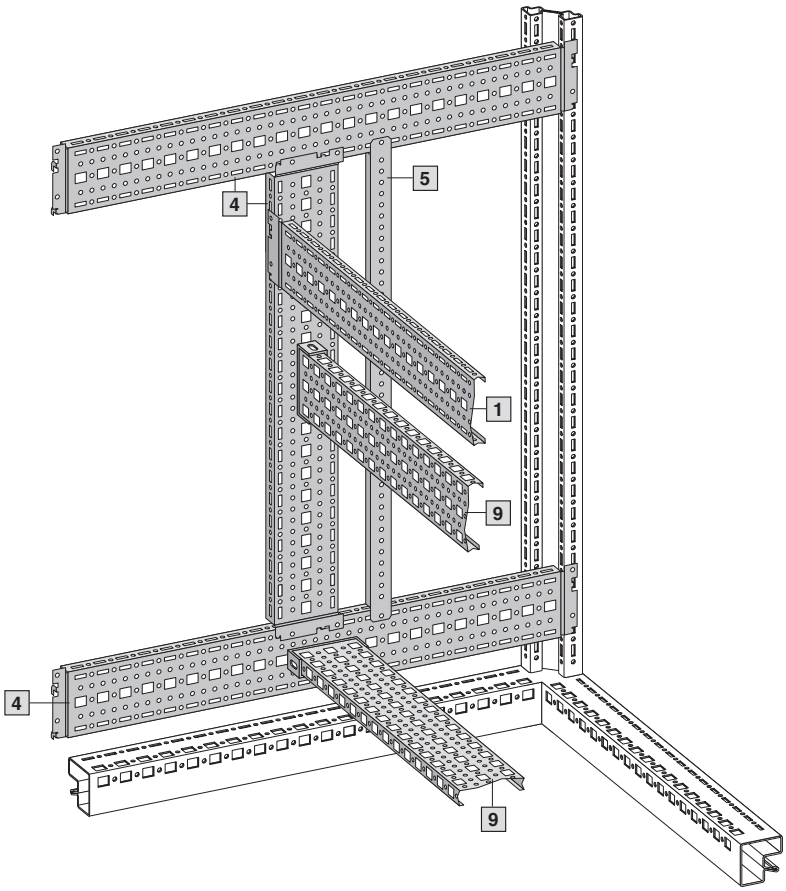
Optimum space utilisation and super-fast assembly by mounting the TS punched section with mounting flange directly onto the outer level of the TS 8 vertical section. Simply snap into position and secure!

Installation accessories (Consecutive numbering in accordance with diagram on page 918)	**Page**
1 TS punched section with mounting flange, 17 x 73 mm for the outer level	921
2 TS support strip for the outer level	924
3 TS punched rail 18 x 38 mm[1] for the ● outer level ● horizontal enclosure sections ● adaptor rail for PS compatibility	923
4 TS punched section with mounting flange, 17 x 73 mm for the inner level	921

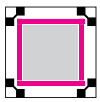
[1] Two TS punched rails 18 x 38 mm are included in the supply of enclosures with a mounting plate. After installing the mounting plate, the TS punched rail may be inserted, as shown here.



German patent no. 196 47 802



Vertical inner mounting level



Separate utilisation of the inner level of the TS 8 vertical section, irrespective of the outer level, creates additional opportunities. Even in one enclosure, all installation systems may complement one another perfectly for brand new, customer-specific solutions. Endless possibilities! Simply snap into position, secure, and voila! Super-fast assembly by mounting the TS punched section with mounting flange directly onto the inner level of the TS 8 vertical section.

Installation accessories (Consecutive numbering in accordance with diagram on page 918)	**Page**
1 TS punched section with mounting flange, 17 x 73 mm for the outer level	921
4 TS punched section with mounting flange, 17 x 23 mm for the inner level	921

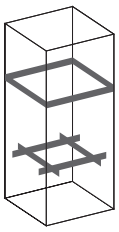
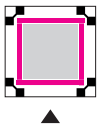
German patent no. 196 47 802





TS punched section with mounting flange, 17 x 73 mm

depth-variable for mounting frames for DK-TS, FR(i), TE
For designing flexible interior installation, and/or to accommodate additional built-in components.
The punched sections with mounting flanges may be located in the enclosure depth between two mounting frames. An additional screw fastening secures the unit.
The depth variability of the rails facilitates flexible adaptation of their length to the existing attachment distance between the two 482.6 mm (19″) mounting frames. An additional punched section centre piece may be slid flexibly along the rail in the depth and secured to slots. This facilitates flexible attachment at any point between the mounting frames in the enclosure depth.

19″ distance between levels mm	Packs of	Model No. TE

TS punched section without mounting flange, 45 x 88 mm

Heavy top-mounted equipment mounted directly on the internal surfaces (e.g. roof) is supported. Mounted on the side or rear, the enclosure can then be screw-fastened securely to the machine. The twin profile with 11 rows of holes offers numerous additional opportunities for interior installation.

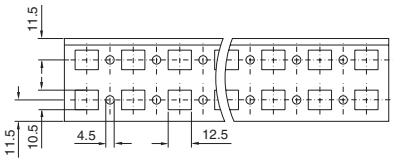
Installation options:
- On the vertical and horizontal TS enclosure section

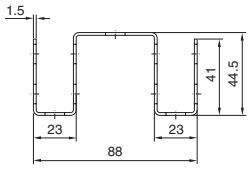
Material:
Sheet steel, zinc-plated, passivated.

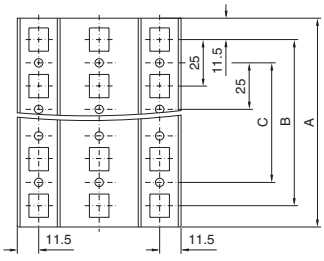
Supply includes:
Assembly parts.

For enclosure width/depth mm	Packs of	Model No. TS
500	2	**8612.650**
600	2	**8612.660**
800	2	**8612.680**

Side punchings







For enclosure width/depth mm	A	B	C
500	398	375	350
600	498	475	450
800	698	675	650

TS punched rail 25 x 38 mm

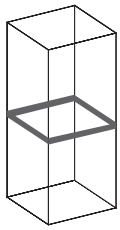
For heavy installations, with attachment holes.

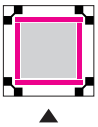
Installation options:
- On the vertical TS enclosure section

With 9 mm round holes all round on a 25 mm pitch pattern, for the configuration of:
- Support rails, see page 927
- System support rails, see page 926
- C rails 30/15, see page 928
- Cable clamp rails (right angle section), see page 979
- Own assemblies

Material:
Sheet steel 3.0 mm, zinc-plated, passivated

Supply includes:
Assembly screws.





For enclosure width/depth mm	Packs of	Model No. TS
400	2	**8612.740**
500	2	**8612.750**
600	2	**8612.760**
800	2	**8612.780**

Also required:

Snap-on nut M8, TS 8800.808,
see page 931.

Note:
In conjunction with the snap-on nut, particularly well-suited for dynamic connections.

TS punched rail 18 x 38 mm

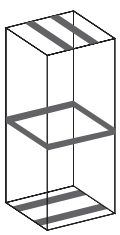
Simply locate and secure with a screw. The location system makes assembly and dismantling easier. It only needs to be secured on one side, but may be secured on both sides if required.

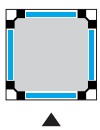
Installation options:
- On the vertical TS enclosure section
  – On the outer mounting level
- On the horizontal TS enclosure section

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly screws.

Note:
In enclosures with a mounting plate, 2 punched rails are already included with the supply.





For enclosure width/depth mm	Packs of	Model No. TS
400	4	**8612.240**
500	4	**8612.250**

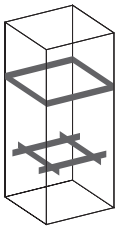
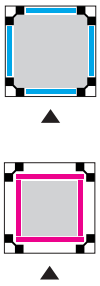
German patent no. 197 37 673
European patent no. 0 940 067
with validity for FR, GB, IT, SE
US patent no. 6,145,943
Chinese patent no. ZL 971 995 32.X
Australian patent no. 725 979

Accessories:

Screws,
see page 937.
Cable tie for quick assembly SZ 2597.000,
see page 982.
Cable clamps,
see page 981.

Rail systems





TS support strips

Installation options:
- On the vertical and horizontal TS enclosure section
  - On the outer mounting level, all-round, at the same height
  - On the inner mounting level, all-round, height-offset
- On the tubular door frame TS, CL, ES
- On the perforated door strip CM
- On the ES system punchings, in the enclosure depth

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly screws.

For the outer mounting level

For enclosure width/depth mm	Length mm	Packs of	Model No. TS

Adaptor rail

for PS compatibility
Installation in the vertical TS enclosure sections (across the entire enclosure height or in sub-sections) to create compatibility with:
- PS punched rail 23 x 23 mm
- Punched section without mounting flange, 23 x 73 mm
- PS punched section with mounting flange, 23 x 73 mm

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly screws.

German patent no. 19 647 781
European patent no. 0 939 990
with validity for FR, GB, IT, SE
US patent no. 6,206,494
Australian patent no. 727 880
Chinese patent no. ZL 971 997 31.4

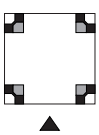
For enclosure height mm	Packs of	Model No. TS
1800	4	**8800.380**
2000	4	**8800.300**
2200	4	**8800.320**

Accessories:

Screws,
see page 937.

Possible alternative:

Snap-on nut,
see page 931.



TS assembly block

Installation in the vertical TS enclosure sections for mounting PS-compatible individual components.

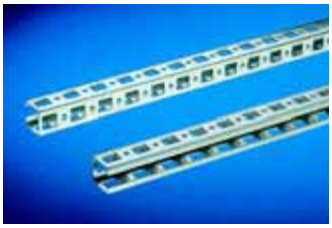
Material:
Die-cast zinc

Supply includes:
Assembly screws.

Packs of	Model No. TS
4	**8800.310**

Possible alternative:

Snap-on nut,
see page 931.



TS punched rails 23 x 23 mm

Installation options:

- On the vertical enclosure section
  - Directly via support brackets TS
  - Via adaptor rail for PS compatibility in conjunction with angle brackets, mounting brackets or support brackets PS
- On the horizontal enclosure section
  - Directly via angle brackets, mounting brackets or support brackets PS

Material:
Sheet steel, zinc-plated, passivated

Support brackets PS/TS,
see page 933.

Accessories:

Screws,
see page 937.
Cable tie for quick assembly SZ 2597.000,
see page 982.
U nuts,
see page 936.

Rail systems

PS punched section with mounting flange, 23 x 73 mm

Variable, with 5 rows of holes for universal skeleton structures or partial assembly. Simply locate into the system punchings and secure.

Installation options:
- On the vertical TS enclosure section
  – Via adaptor rail for PS compatibility
- On the horizontal TS enclosure section
- On the ES system punchings, in the enclosure depth

Material:
Sheet steel, zinc-plated, passivated

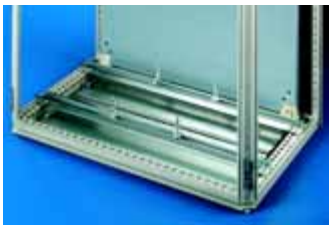
Supply includes:
Assembly screws.

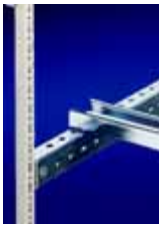
Installation in enclosure width/depth TS mm	Packs of	Model No. PS
400	4	**8800.640**
500	4	**8800.650**
600	4	**4364.000**
800	4	**4365.000**
1000	4	**4373.000**
1200	4	**4367.000**

Installation in enclosure depth ES, AP universal console, CS modular enclosures mm	Packs of	Model No. PS
400	4	**4369.000**
500	4	**4370.000**
600	4	**4371.000**
800	4	**4372.000**

Also required:

Adaptor rail for PS compatibility
(when mounting on the vertical TS enclosure section), see page 924.





System support rails

For heavy installed equipment such as transformers. T-head screw and slot in the support rail for any mounting position.

Installation options:
- On the vertical TS enclosure section
  – Via snap-on nut TS 8800.808 (Fig. left)
  – Via adaptor rail for PS compatibility
  – Offset in the height, via TS punched rail 25 x 38 mm (Fig. right)
- On the horizontal TS enclosure section
  – In the width
  – In the depth (without mounting plate)
- On the ES system punchings, in the enclosure depth

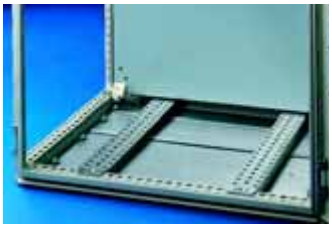
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
2 system support rails (45 x 25 mm),
4 T-head screws M12 x 60 mm,
and assembly parts.

For enclosure width mm	Packs of	Model No. PS
600	2	**4361.000**
800	2	**4362.000**
1000	2	**4347.000**
1200	2	**4363.000**

Accessories:

Width divider e.g. for the installation of 2 system support rails (for 600 mm width) in 1200 mm wide enclosures,
see page 850.
Snap-on nut M8, TS 8800.808,
see page 931.
Adaptor rail,
see page 924.
TS punched rail 25 x 38 mm
see page 923.



Support rails

For heavy installations, with attachment holes. Particularly suitable for the installation of base isolators.

Installation options:

- On the vertical TS enclosure section
  - Via snap-on nut TS 8800.808 (Fig. left)
  - Via adaptor rail for PS compatibility
  - Offset in the height, via TS punched rail 25 x 38 mm (Fig. right)
- On the horizontal TS enclosure section
  - In the width
  - In the depth
- On the ES system punchings, in the enclosure depth

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure width/depth mm	Packs of	Model No. PS
400	4	**4394.000**
500	4	**4395.000**
600	4	**4396.000**
800	4	**4398.000**

Accessories:

Snap-on nut M8, TS 8800.808,
see page 931.
Adaptor rail,
see page 924.
TS punched rail 25 x 38 mm
see page 923.

Support rails TS 35/15

to EN 50 022
for TS, ES

Mounting on the TS vertical section via snap-on nut M8, TS 8800.808, see page 931, assembly block see page 924 or adaptor rail, see page 924.

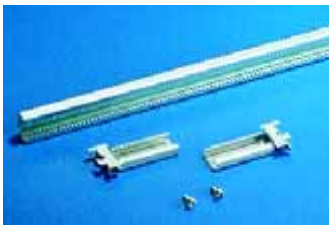
Cable clamps, see page 981.
Support bracket or spacer, see page 934.
Quick-assembly block, see page 934.
Snap-on nut M8, TS 8800.808, see page 931.
Adaptor rail, see page 924.

Possible alternative:

Rail for EMC shielding bracket and strain relief, see page 957.



C rails

for DK-TS, CS Toptec

For direct mounting on the vertical enclosure section.
Thanks to the universally designed attachment piece, the C rails may optionally be attached to the inner or outer level of the TS 8 frame.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure width/depth mm	Length mm	Packs of	Model No. DK
400	298	4	**7828.040**
500	398	4	**7828.050**

System adaptor

for FR(i)

By using the system adaptor, the principle of two TS 8 attachment levels within this enclosure system is easily achieved. This supports the integration of all rail systems which are attached to the outer enclosure level, and therefore offers a diverse choice of installation options. The inner attachment level may be emulated by simply rotating the system adaptor, and therefore creates the requirements for perfect cable management and completely flexible interior installation. Rail systems attached between the front and rear frame section must be 200 mm shorter than the external enclosure dimensions.

1 Installation position, outer level

2 Installation position, inner level

Packs of	Model No. FR(i)
8	**7856.760**

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Snap-on nut TS

Metric thread for vertical TS enclosure section. To install, insert into slot and clip into position. The snap-on nut is then secure. By tightening the screw, it is securely tightened against the section, and potential equalisation is automatically created.

Installation options:

- On the vertical TS enclosure section
  - with metric thread M6 or M8
  - the alternative to metal screws
  - particularly well-suited for dynamically loaded connections.

Material:
Precision-cast stainless steel

Thread	Packs of	Model No. TS
M6	20	**8800.806**
M8	20	**8800.808**

German patent no. 101 49 599

Accessories:

Allen screw M6 x 12 or M8 x 12,
see page 937.

1

2

3

4

5

Accessories for interior installation

1 Support rails,
see page 927

2 Cable clamp rails,
see page 979

see page 928

4 System support rails,
see page 926

5 TS punched rail 25 x 38 mm,
see page 923

Adaptor bracket TS

For external mounting of

- System lights
- Cable duct

on the vertical TS enclosure section.

Material:
Sheet steel, zinc plated, passivated

Supply includes:
Assembly screws.

Packs of	Model No. TS
6	**8800.360**

Assembly components

Mounting bracket TS

Offers variable mounting opportunities for the mounting angle 23 x 23 mm.
E.g. for supporting external surfaces or creating an additional internal level.

Material:
Die-cast zinc

Supply includes:
24 metal screws BZ 5.5 x 13 mm.

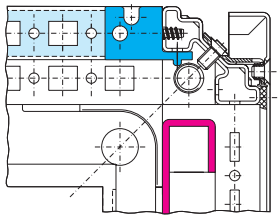
Packs of	Model No. TS
24	**8800.370**

Accessories:

U nuts for punched rails (recommended: M6), see page 936.

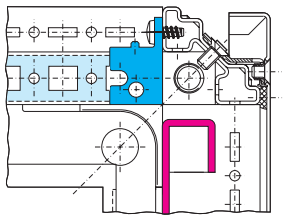
Installation options:
- On the vertical TS enclosure section
  – flush with the outer edge of the enclosure or
  – flush with the enclosure clearance width.

1



1 Support of the external surfaces with two mounting options:
- Without mounting plate (photo)
- With mounting plate (drawing)

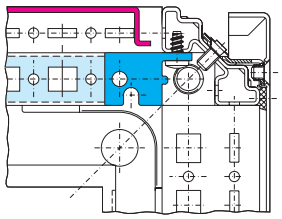
2



Two installation options for the inner mounting level:

2 If there is no divider panel fitted.

3



3 With a divider panel fitted, with or without mounting plate in a set forward position.

Mounting bracket PS

For variable attachment of punched rails 23 x 23 mm.

Installation options:
- Optionally flush with:
  – Outer enclosure edge or
  – Enclosure clearance width
- On the vertical TS enclosure section via
  – Adaptor rail for PS compatibility
  see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Die-cast zinc

Supply includes:
1 set =
1 mounting bracket,
1 screw M6 x 12 mm,
1 cage nut M6.

Packs of	Model No. PS
24 sets	**4182.000**

Also required:

U nuts for punched rails (recommended): M6, see page 936.
Multi-tooth screws M6 x 12 mm, see page 937.

Angle bracket PS

For quick attachment of punched rails 23 x 23 mm.

Installation options:
- On the vertical TS enclosure section via
  – Adaptor rail for PS compatibility
  see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Sheet steel, zinc plated, passivated

Supply includes:
1 set =
1 angle bracket, left,
1 angle bracket, right,
2 screws BZ 5.5 x 13 mm.

Packs of	Model No. PS
12 sets	**4181.000**

Also required:

U nuts for punched rails (recommended): M6, see page 936.
Multi-tooth screws M6 x 12 mm, see page 937.

Support bracket TS

For fastening
punched sections without mounting flanges 23 x 73 mm or
punched rails 23 x 23 mm.

Installation options:
- On the vertical and horizontal TS enclosure section
  – on a 25 mm pitch pattern
  – in 2 mm increments

Material:
Die-cast zinc

Supply includes:
1 set =
1 support bracket,
1 stay,
3 screws BZ 5.5 x 13 mm.

Packs of	Model No. TS
6 sets	**8800.330**

German patent no. 199 37 892

Also required:

U nuts for punched rails (recommended): M6, see page 936.
Multi-tooth screws M6 x 12 mm, see page 937.

Support bracket PS

For fastening
punched sections without mounting flanges 23 x 73 mm or punched rails 23 x 23 mm.

Installation options:
- On the vertical TS enclosure section via
  – Snap-on nut TS 8800.806, see page 931, or
  – Adaptor rail for PS compatibility
  see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Die-cast zinc

Supply includes:
1 set =
1 support bracket,
2 countersunk screws,
2 serrated lock washers.

Packs of	Model No. PS
24 sets	**4183.000**

Also required:

U nuts for punched rails (recommended): M6, see page 936.
Multi-tooth screws M6 x 12 mm, see page 937.
Adaptor rail for PS compatibility (when mounting on the vertical enclosure section), see page 924.

Assembly components

Support bracket or spacer

For fastening C rails, punched rails or cable clamp rails (angle section). On the sides, to accommodate square sections or tubes (Ø 20 mm).
Attachment points with M8 thread.

Installation options:
- On the vertical TS enclosure section via
  – Snap-on nut TS 8800.808, see page 931, or
  – Adaptor rail for PS compatibility see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Die-cast zinc

Supply includes:
1 set =
1 bracket or spacer,
2 screws M8 x 16 mm,
2 spring lock washers,
2 captive nuts M8,
2 serrated lock washers,
2 screws.

Packs of	Model No. TS
6 sets	4199.000

Accessories:

Angle piece TS 4134.000, see page 934.

Quick-assembly block

For a variety of installation options.

Installation options:
- On the vertical TS enclosure section via
  – Snap-on nut TS 8800.808, see page 931, or
  – Adaptor rail for PS compatibility see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Die-cast zinc

Supply includes:
12 quick-assembly blocks,
12 threaded blocks M8,
24 screws M8 x 12 mm,
24 square nuts M8.

Packs of	Model No. TS
12	4133.000

German patent no. 42 33 205

Angle piece

For assembling punched rails and mounting surfaces with a 45° incline.

Installation options:
- On the vertical TS enclosure section via
  – Snap-on nut TS 8800.806, see page 931, or
  – Adaptor rail for PS compatibility see page 924
- On the horizontal TS enclosure section
- On enclosures and rails with square system punchings 12.5 x 10.5 mm.

Material:
Angle pieces: Die-cast zinc
Insulating pieces: Plastic

Supply includes:
1 set =
1 angle piece,
1 insulating piece,
1 insulating screw and
2 assembly screws,
1 threaded block M6.

Packs of	Model No. TS
12 sets	4134.000

Universal bracket

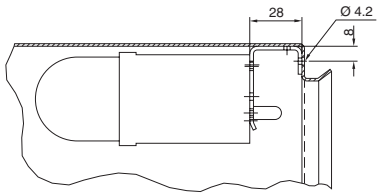
For installing
- Enclosure lights in
  – Compact enclosures AE and AK
  – Console systems AP
- Door-operated switches in
  – Compact enclosures AE
  – Console systems AP
- Cable conduit holder SZ 2593.000 and SZ 2591.000 in
  – Compact enclosures AE
  – Console systems AP
- Support rails for terminals in
  – Operating housings and command panel housings with door.

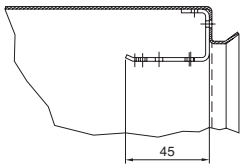
Mounting screws are concealed when the door is closed. Existing holes for mounting blocks or hinges may be used with AE.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. SZ
6	**2373.000**



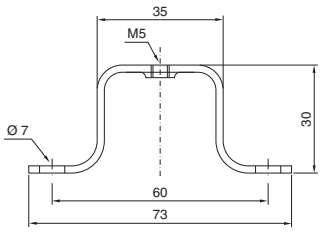


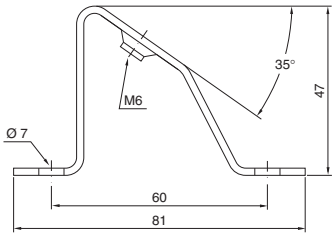
Rail mounting bracket

for individual rail mounting.

Material:
Sheet steel, zinc-plated, passivated

Mounting bracket	Packs of	Model No. SZ
Flat	20	**2365.000**
Inclined	20	**2366.000**





Mounting block

for AE

As an accessory for additional interior installation, e.g. mounting of cable ties, PS punched rails, top hat rails and C rails (e.g. for a second pair of mounting angles).

Supply includes:
Assembly parts.

Packs of	Model No. SZ
20	**2574.000**

Assembly components

U nuts

For
- Punched rail 23 x 23 mm
- Punched section without mounting flange, 23 x 73 mm
- Punched section without mounting flange, 45 x 88 mm
- Punched section with mounting flange, 23 x 73 mm

For mounting punched rails and punched sections without mounting flanges on angle brackets, mounting brackets and support brackets, we recommend U nuts with M6 thread (PS 4179.000).

Thread	Packs of	Model No. PS
M4	20	**4119.000**
M5	20	**4157.000**
M6	20	**4179.000**
M8	20	**4180.000**

Accessories:

Multi-tooth screws M6 x 12 mm, (for PS 4179.000), see page 937.

Cage nuts/threaded blocks

Installation options:
On enclosures and rails with square system punchings 12.5 x 10.5 mm, for example on:
- TS enclosure section
  – vertical, via adaptor rail for PS compatibility
  – horizontal, direct
- ES enclosure body, all-round
- Punched rails 23 x 23 mm
- Punched sections without mounting flanges, 23 x 73 mm
- Punched sections without mounting flanges, 45 x 88 mm
- Punched sections with mounting flanges, 23 x 73 mm

Possible alternative:

On the vertical TS enclosure section TS snap-on nut, see page 931.

Cage nuts
The compression spring designed as an insertion aid ensures reliable, mechanical and electrical connection in the system punchings.

Thread	Packs of	Model No. TS
M6	50	**4164.000**
M8	50	**4165.000**

Threaded blocks
With snap-off insertion aid, die-cast zinc.

Thread	Packs of	Model No. TS
M6	50	**4162.000**
M8	50	**4163.000**

Cage nuts
The nuts are inserted from the same side as screw-fastening takes place. Consequently, attachment points in the same height or width may also be used around corners.
The spring cage also ensures electrical connection in the system punchings.

Thread	Packs of	Model No. TS
M6	50	**8800.340**
M8	50	**8800.350**

German patent no. 198 60 434

Spring nut M5

For
- Optipanel from an installation depth of 100 mm
- VIP 6000 from an installation depth of 185 mm

The spring ensures reliable protection against unintentional displacement.
Other interior installation, e.g. with mounting bracket PS 4597.000 (see page 930).

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. CP
50	**6108.000**

Threaded inserts M6

for KS
For securing installed equipment to the moulded bosses in the door and in the enclosure rear panel.
Screw length available for insertion: 8 mm.

Packs of	Model No. KS
20	**1482.000**

Multi-tooth screws

M6 x 12 to fit:
- Snap-on nut (TS 8800.806)
- U nuts for punched rails (PS 4179.000)
- Cage nuts (PS 4164.000)
- Threaded blocks (TS 4162.000)

M6 x 12 to fit:
- Snap-on nut (TS 8800.808)

Multi-tooth screws

For the round holes 4.5 mm diameter in the enclosure section, punched rails and punched sections without mounting flanges.

Self-tapping screws

For the round holes 4.5 mm diameter in the enclosure section, punched rails and punched sections without mounting flanges.

Self-tapping screws

Mark, drill and tighten in a single operation using electric or pneumatic tools.

For metal thickness: 0.8 – 3 mm
Length: 16 mm
Usable length: 9.5 mm
Width across flats: 8 mm

Multi-tooth drive for optimum transmission of torques, an extended tool life and increased safety and reliability when tightening and loosening screw connections.

Type of screw	Dimensions mm	Packs of	Model No. SZ
Multi-tooth screws	M6 x 12 M8 x 12	300 300	**2504.500** **2504.800**

Self-tapping screws	ST 4.8 x 16	300	**2487.000**

Assembly components

TS adaptor for wiring systems

Adaptior rail
for the Lütze LSC wiring system.

Supply includes:
1 set =
6 adaptor rails,
24 spring lock washers,
24 screws BZ 5.5 x 13 mm.

Note:
Mounting parts for the LCS wiring system not included with the supply.

For enclosure depth mm	Packs of	Model No. TS
400	1 sets	**8800.140**
500		**8800.150**
600		**8800.160**
800		**8800.180**

Installation kit
for the Moeller MR 25 wiring system.

Supply includes:
1 set =
2 mounting brackets,
4 mounting rails,
including assembly parts.

For enclosure depth mm	Packs of	Model No. TS
400	1 sets	**8800.240**
500		**8800.250**
600		**8800.260**

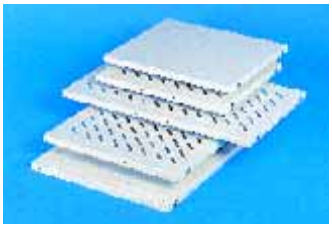
Kit

for separate frame TS
Every TS 8 frame is easily converted to a rack suitable for dismantling. To this end, the frame sections in the roof and base frame are separated, optionally in the width or depth. The four connection components are inserted into the frame section and screw-fastened. The external dimensions of the frame remain unchanged.

Supply includes:
Assembly parts.

Note:
The IP water protection of the enclosure system is lost once the frame is separated.

Packs of	Model No. DK
4	**7829.400**



Component shelf for frame attachment

Enclosure width 600 mm or between two 482.6 mm (19″) mounting frames

Maximum depth of component shelves with enclosure frame attachment = Enclosure depth minus 100 mm.

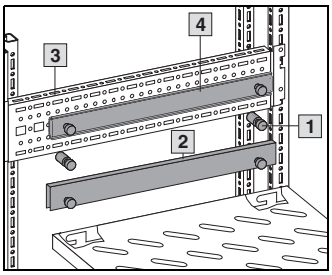
Technical specifications:
Mounting bolts or mounting rails may be installed on a 25 mm pitch pattern in the enclosure depth. Mounting hole for handles provided.

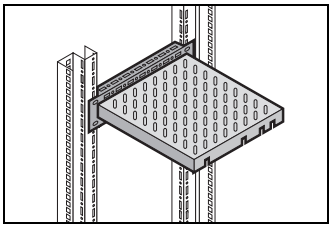
Load capacity:
50 kg/100 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.





1 Fastening bolts
2 Mounting rails
3 Divider kit
4 Telescopic slides

Also required:

TS punched section with mounting flange, 17 x 73 mm, as divider kit for component shelves, see page 949.
For FR(i) plus system adaptor, see page 930.

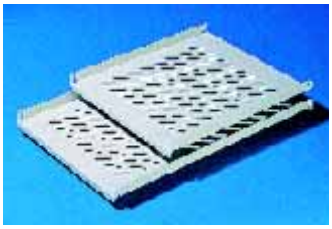
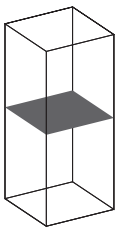
800	900	**7828.890**
800	1000	**7828.800**

Note:
Combined use with vertically divided doors is not possible.
Not suitable for combination with telescopic slides.





Component shelf, static installation

for PC-ES

For direct mounting on the enclosure frame. Simply locate into the 4 screws, tighten, and voilà!

Load capacity:
40 kg surface load, static

Material:
Sheet steel

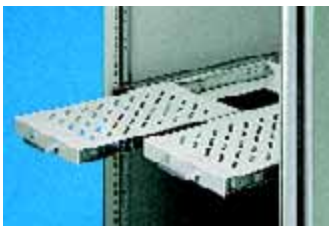
Colour:
RAL 7035

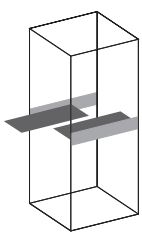
Supply includes:
Assembly parts.

For enclosures		Support area		Model No. PC
Width mm	Depth mm	Width mm	Depth mm	
600	650	510	555	**4619.660**
600	850	510	755	**4619.680**

Accessories:

Mounting bolts for slotted component shelves DK 7115.000,
see page 953.





Component shelf, two-piece

with telescopic extension and handles for TS, FR(i)

For attaching to the enclosure frame. The component shelves can be pulled out independently of one another on telescopic slides.

Load capacity:
25 kg surface load per shelf, static

Material:
Sheet steel

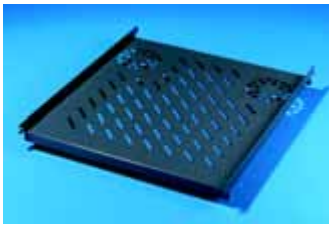
Colour:
RAL 7035

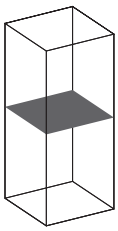
For enclosure width mm	Dimensions of component shelf			Packs of	Model No. DK
	Width mm	Depth mm	Height mm		
600	220	500	35	2	**7183.205**
800	320	500	35	2	**7183.215**

Also required:

TS punched section with mounting flange 17 x 73 mm for the inner mounting level,
see page 949.
For FR(i): TS punched section with mounting flange for the outer mounting level plus system adaptor FR(i),
see page 930, as divider kit for component shelves.

Component shelves for frame attachment





Component shelf, static installation

for TS, PC-TS, IW
prepared for fan expansion kit
For direct mounting on the vertical TS enclosure section. Simply located into 4 pre-fitted screws and secure.

Load capacity:
40 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7015

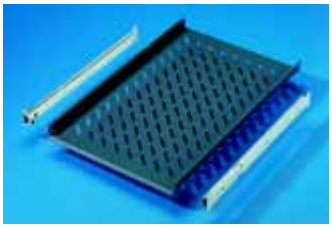
Supply includes:
Assembly parts.

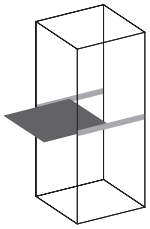
For enclosures		Support area		Model No. PC
Width mm	Depth mm	Width mm	Depth mm	
600	600	507	550	**8800.900**
600	800	507	750	**8800.910**

[1] For enclosures without a mounting plate.

Accessories:

Fan expansion kit DK 7980.000,
see page 652.





Component shelf, pull-out

for TS, PC-TS, IW
For direct mounting on the vertical TS enclosure section.

Load capacity:
40 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7015

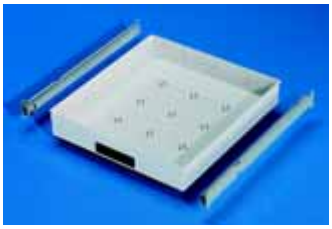
Supply includes:
2 telescopic slides.

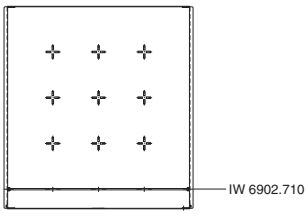
For enclosures[1]		Support area		Model No. IW
Width mm	Depth mm	Width mm	Depth mm	
600	600	465	545	**6902.960[2]**
600	800	465	745	**6902.980**

[1] For enclosures without a mounting plate.
[2] May also be installed in 800 mm deep enclosures based on TS (pull-out rear attachment).

Also required:

When installing more than one pull-out component shelf/drawer tray, we recommend that for reasons of work safety to DIN EN 349, a drawer extension lock should be used, see page 952.





Drawer tray

pull-out
For enclosures with TS frame construction in series IW, PC-TS, DK.
Width 600 mm and depth 600 – 800 mm.
Individual sub-division is possible via the use of cross members.
Tray height: 83 mm

Load capacity:
40 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
2 telescopic slides.

Note:
Suitable for installation in all enclosures, without mounting plate, with W x D 600 x 600/800 mm based on TS (rear attachment of telescopic slides extendible).

When sub-dividing the drawer tray, one cross member is always needed for the entire width (IW 6902.710).

Packs of	Model No. IW
1	**6902.700**

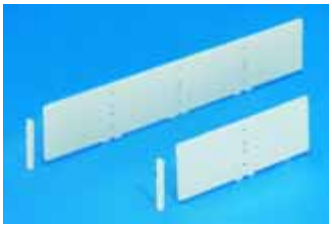
Also required:

When installing more than one pull-out component shelf/drawer tray, we recommend that for reasons of work safety to DIN EN 349 a drawer extension lock should be used, see page 952.

Accessories:

Cross members,
see page 943.

Component shelves for frame attachment



Cross members

for drawer tray
For individual sub-division.

Material:
Aluminium, 3 mm

Colour:
RAL 7035

Supply includes:
Plastic holder.

For subdivision in	Packs of	Model No. IW
the full width	4	**6902.710**
half the width	6	**6902.720**

Note:
When sub-dividing the drawer tray, one cross member is always needed for the entire width (IW 6902.710).

Telescopic slides

For location into the vertical TS frame section. Additional punched sections are not required. Fully extendible.

Load capacity:
40 kg per pair

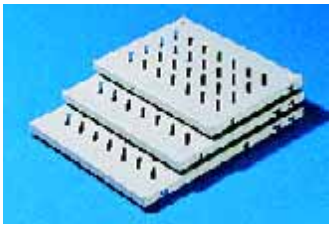
Material:
Sheet steel, zinc-plated, passivated

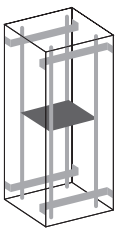
Supply includes:
Assembly parts.

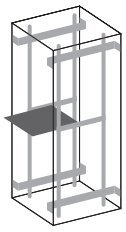
Packs of	Model No. IW
2	**6902.800**

Note:
Suitable for installation in all enclosures, without mounting plate, with W x D 600 x 600/800 mm based on TS (rear attachment of telescopic slides extendible).

Component shelves for attachment to the 482.6 mm (19″) frame







Component shelf, 482.6 mm (19″) installation

For enclosures with two 482.6 mm (19″) mounting levels.

Depending on their depth, the component shelves have several attachment points, so the distance between the 482.6 mm (19″) mounting angles is variable within certain limits. Each component shelf secured in this way can be retrospectively upgraded to full withdrawal using telescopic slides. For this purpose, the telescopic slides are screw-fastened in place of the spacers.

Load capacity:
50 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Note:
For installation in one 482.6 mm (19″) level:
In conjunction with 3 U side parts, mounting on only one 482.6 mm (19″) level is possible.
30 kg surface load, static.

Also required:

Adaptor for L-shaped mounting angles TS, see page 950.
Divider kit, depth-variable, for installation on mounting frames and L-shaped mouning angles, see page 949.

Accessories:

Telescopic slides, see page 951.
Cable support, hinged, see page 951.
Side parts 3 U, see page 950.

Possible alternative:

Component shelf, heavy duty, for 482.6 mm (19″) population, see page 945 – 946.

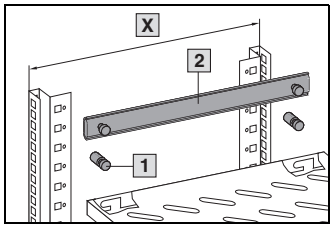
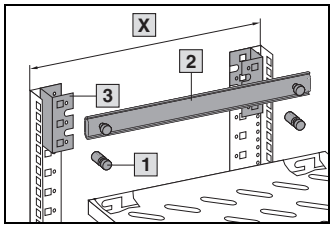
Component shelf version in RAL 7032 available on request.

1 Spacers
2 Telescopic slides
3 Adaptor
4 Divider kit, depth-variable
X Distance between levels

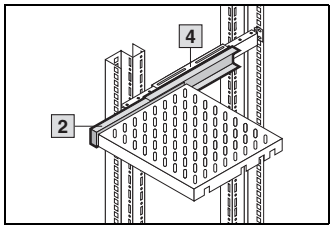
Note for installation in network enclosures based on TS, cranked mounting angle:
The component shelves are mounted on the sides of the 482.6 mm (19″) cranked mounting angle with spacers on a U pitch pattern.



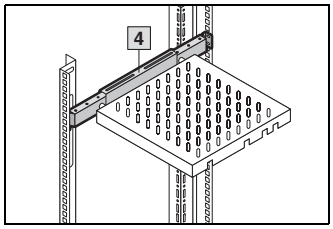
Note for installation in network enclosures based on TS, L-shaped mounting angle:
If L-shaped mounting angles are used, adaptor DK 7827.300 is required.



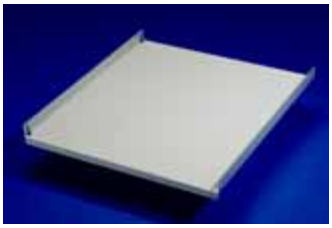
Note for installation between two mounting frames or L-shaped mounting angles:
May be mounted directly on the 482.6 mm (19″) system punchings using the depth-variable divider kit.

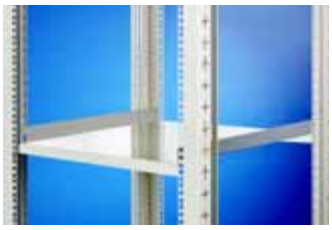


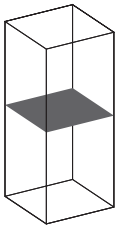
Note for installation between mounting angles and mounting frames:
May be mounted directly on the 482.6 mm (19″) system punchings using the depth-variable divider kit.



Component shelves for attachment to the 482.6 mm (19″) frame







Component shelf, static installation

on the 482.6 mm (19″) mounting frame
The component shelf is attached directly to the front and rear 482.6 mm (19″) mounting frame.

Load capacity:
30 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

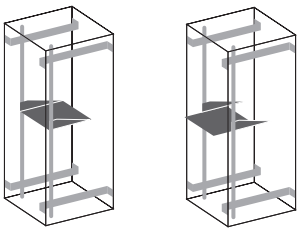
Accessories:

Telescopic slides (100 kg) for 482.6 mm (19″) component shelf, see page 951.



Component shelf 2 U

482.6 mm (19″)
Suitable for installation in all enclosures with only one 482.6 mm (19″) mounting level and all swing frames with flange mounting, 482.6 mm (19″).

Load capacity:
25 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

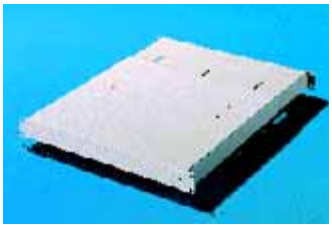
Width mm	Depth mm	Model No. DK
390	300	**7148.035**

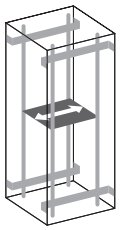
To order the version in RAL 7032, please add extension .000 to the Model No.
Delivery times available on request.

Accessories:

Telescopic slides for component shelves, see page 951.
Handles, see page 953.

Component shelves for attachment to the 482.6 mm (19″) system punchings





Component shelf, 1 U, depth-variable

482.6 mm (19″)
For mounting between the front and rear 482.6 mm (19″) levels. The component shelf is infinitely depth-adjustable from 488 mm to 750 mm.

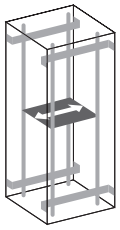
Load capacity:
50 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Distance between levels mm	Model No. VR
488 – 750	**3861.580**

Note:
Not suitable for combination with telescopic slides.



Component shelf, 1/2 U, depth-variable

482.6 mm (19″)
This space-saving component shelf is screw-fastened to the front and rear 482.6 mm (19″) mounting angles. It is infinitely depth-adjustable and may be fitted independently from the enclosure.

Load capacity:
50 kg surface load, static

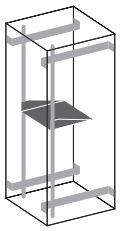
Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Distance between levels mm	Model No. DK
400 – 600	**7063.710**
600 – 900	**7063.720**

Note:
Not suitable for combination with telescopic slides.



Component shelf 1 U, static installation

482.6 mm (19″)/535 mm (metric)
The ideal support surface for small active components such as modems or mini-hubs in 482.6 mm (19″) or metric levels.

Load capacity:
10 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Component shelf depth mm	Model No. DK	
	482.6 mm (19″)	Metric
140	**7119.140**	**7119.155**

Also required:

Cage nuts,
see page 1020.
Screws,
see page 1019.

Component shelves for attachment to the 482.6 mm (19″) system punchings

Component shelf 1 U, static installation

42 HP (1/2 19″)
The ideal support surface for small active components such as modems or mini-hubs.

Material:
Sheet steel

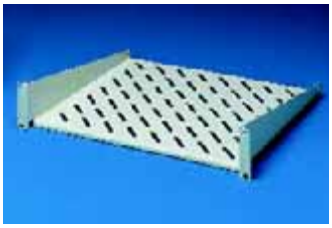
Colour:
RAL 7035

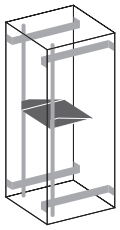
Note:
Combination with telescopic slides is not possible.

Component shelf depth mm	Model No. DK
140	**7502.600**

Also required:

Cage nuts,
see page 1020.
Screws,
see page 1019.





Component shelf 2 U, static installation

482.6 mm (19″)/535 mm (metric)
If only one 482.6 mm (19″) or metric mounting level is available for mounting a component shelf, this variant offers a particularly cost-effective solution.

Load capacity:
25 kg surface load, static

Material:
Sheet steel

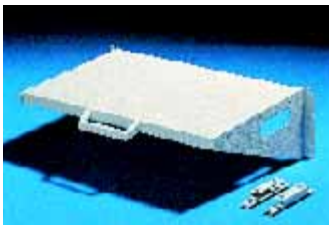
Colour:
RAL 7035

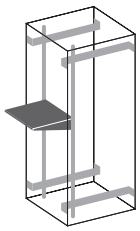
Note:
Combination with telescopic slides is not possible.

Component shelf depth mm	Model No. DK	
	482.6 mm (19″)	Metric
250	**7119.250**	**7119.255**
400	**7119.400**	**7119.455**

Also required:

Cage nuts,
see page 1020.
Screws,
see page 1019.





Utility table

for location in the 482.6 mm (19″) level
The utility table may be attached directly between the 482.6 mm (19″) mounting angles without any additional assembly work. The utility table has a height of 3 U and a support area of 450 x 295 mm; it can be used as a support for measuring devices or splicing equipment during maintenance and wiring work.

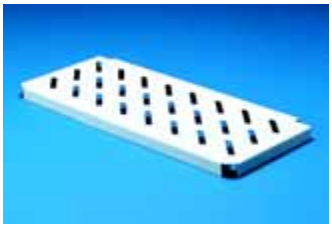
Material:
Sheet steel

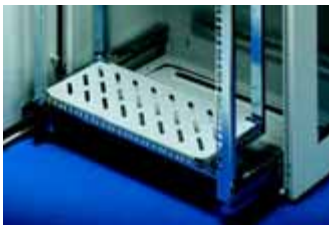
Colour:
RAL 7035

Supply includes:
Assembly parts.

Support surface mm	Model No. DK
450 x 295	**7183.100**

Component shelves for attachment to the 482.6 mm (19″) system punchings/divider kits





Shelf

for AE with pull-out frame
The vented shelf is inserted into the pull-out frame of wall-mounted distributor DK 7644.000 and may additionally be screw-fastened. In this way, an additional support surface can be created with very little effort. Cage nuts may be clipped into the punchings of the frame, even after the shelf has been inserted.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Width mm	Depth mm	Model No. DK
430	195	**7644.400**

TS punched section with mounting flange, 17 x 73 mm

as divider kit for component shelves
Simply locate and secure. One pack is sufficient for 2 component shelves.

Load capacity:
100 kg surface load, static

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

710 – 1000	100 kg	**7063.890**

[1)] Only in conjunction with 500 mm deep component shelves

Accessories:

Telescopic slides,
see page 951.

Divider kits for component shelves

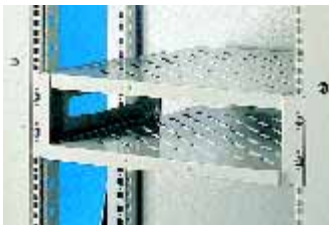
Adaptor for L-shaped mounting angles

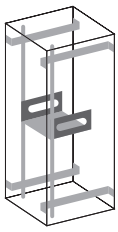
for TS network enclosures
For mounting component shelves and slide rails on L-shaped mounting angles.

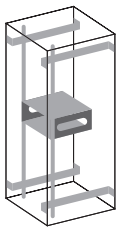
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. DK
4	**7827.300**







Side parts 3 U

for static installation of component shelves, 482.6 mm (19″)
For the attachment of component shelves to a single pair of 482.6 mm (19″) mounting angles. The component shelves are screw-fastened to the 3 U side part.
Either one or two component shelves may be secured.

Load capacity:
30 kg surface load, static

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
2 side parts.

Note:
Combination with telescopic slides is not possible.

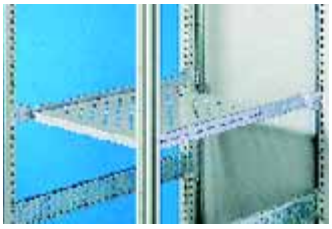
To order the version in RAL 7032, please add extension .000 to the Model No.
Delivery times available on request.

Accessories:

Component shelves, 482.6 mm (19″),
see page 944.



Divider kit

for component shelves and drawers, 482.6 mm (19″) installation in TS
For installation between the front and rear adaptor sections or adaptor pieces, 482.6 mm (19″) in 600 mm wide enclosures.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure depth mm	Packs of	Model No. TS
500	1 set	**8800.550**
600	1 set	**8800.560**
800	1 set	**8800.580**

Max. depth of component shelves = Enclosure depth – 100 mm

Also required:

Mounting angles, 482.6 mm (19″),
see page 1003.
Adaptor pieces 482.6 mm (19″),
see page 1004.

Accessories for component shelves

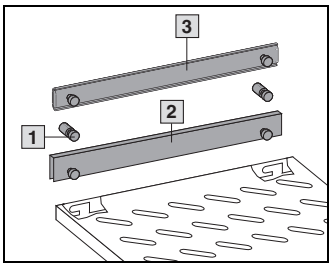
Telescopic slides

for component shelves
Fixed component shelves are easily retro-converted to full withdrawal. For this purpose, the existing fastening bolts or mounting rails (heavy-duty version) are exchanged for the telescopic slides.

Technical specifications:
For installation and locking on a 25 mm pitch pattern in the enclosure depth.

Load capacity:
50 kg/100 kg per set

Material:
Sheet steel, zinc-plated, passivated



For component shelf depth mm	Packs of	Model No. DK

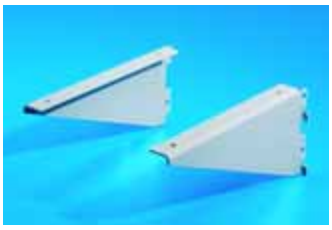
2 Mounting rails
3 Telescopic slides

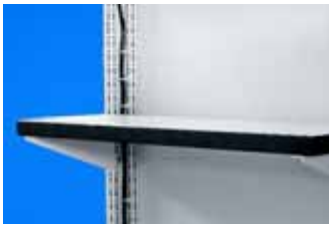


Bracket, locatable

for shelves
Simply locate into the vertical TS section. May be additionally secured with screws.
Support surface for shelves: 200 mm.

Material:
Sheet steel

Colour:
RAL 7035



Packs of	Model No. IW
3 pairs	**6902.690**

Cable support

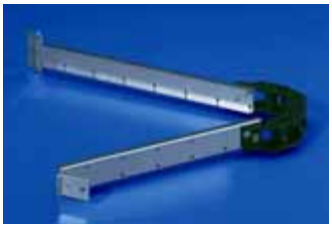
hinged, with clamp
For secure routing of connection cables from the component shelf to the clamping point.
The attachment may be released on both sides thanks to clamps.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosure depth mm	Model No. DK
< 600	**7163.500**
> 600	**7163.550**

Accessories for component shelves



Cable support

hinged, with anti-kink device and clamp
For secure routing of connection cables from the component shelf to the clamping point. Kink-free cable routing in the central part via mobile chain links. The attachment may be released on both sides, thanks to clamps.

Material:
Sheet steel, zinc-plated, passivated; plastic.

Supply includes:
Assembly parts.

For enclosure depth mm	Model No. DK
< 600	**7163.560**
> 600	**7163.565**

Drawer extension lock

for 600 mm wide enclosures based on TS 8
To increase work safety.
In conjunction with the stay, prevents simultaneous extension of up to 5 drawer trays or pull-out component shelves and thereby ensures stability.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
PS punched section with mounting flange 23 x 73 mm (to match the enclosure height) and assembly parts.

For enclosure height mm	Packs of	Model No. IW
900	1 set	**6902.730**
1000	1 set	**6902.740**

Note:
When installing more than one extendible component shelf/drawer tray, we recommend using the drawer extension lock for work safety reasons.
For installation in taller enclosures, one PS punched section with mounting flange 23 x 73 mm (to match the enclosure height) is required.

Accessories:

Stay for drawer extension lock.

Contact cutter

The contact cutter enables EMC-compatible preparation of the contact point e.g. for earthing straps.
Plastic-bound abrasive with guide pin for round system punchings.
With location point for drill, grinder etc.

	Model No. SM
For frame section	**2414.000**
For earthing bolts[1)]	**2414.500**

[1)] not necessary with TS 8

Contact paint

Contact paint prevents the corrosion of conductive, unprotected contact points.

Contents:
12 ml

Packs of	Model No. SZ
1	**2415.000**

Earthing

Earth straps

For configuring a reliable earthing connection with perfect contact.

- With ring terminals in M6 and M8 to match the earthing screw
- Length-optimised and ready to install

For	Door/lid	Enclosures
KL, EB, AE 1032.XXX, AE 1035.XXX	M6	M6
AE, AP	M6	M8
TS, ES, PC, AP universal console, KE	M8	M8

M8	16	300	10	**2412.316**
M8	25	300	10	**2412.325**

Assembly parts

For fastening the earth straps and earthing braids to:

- Horizontal TS enclosure sections
- RS rail system
- ES system punchings

Size	Packs of	Model No. SZ
M6	10 set	**2570.000**
M8	10 set	**2559.000**

Also required:

For mounting on the horizontal TS enclosure section:
Captive nut,
see page 936.

Contact washers

Toothed contact washers facilitate secure PE conductor connection. As a result, there is no need to manually strip paint in the connection area.

Size	Packs of	Model No. SZ
M5	100	**2343.000**
M6	100	**2334.000**
M8	100	**2335.000**

Central earthing point

For connecting
- Earth straps
- Earthing braids

to the vertical and horizontal enclosure profile.
The connection bracket is connected to the enclosure frame with 2 screws and is securely contacted.
Earth connection is carried out via the threaded bolt M8 x 20 mm.

Material:
Sheet steel, zinc-plated, passivated.

Supply includes:
1 connection bracket,
2 screws BZ 5.5 x 13 mm,
2 serrated washers,
1 nut M8,
1 contact washer M8,
1 washer.

Packs of	Model No. DK
1	**7829.200**

Earthing plate

For installation in:
- Command Panel
- VIP 6000
- Optipanel
- TS
- ES

One earthing cable can be screw-fastened to the threaded bolt and can be distributed to up to 8 components via 6.3 mm flat-pin connectors.

Supply includes:
Assembly parts.

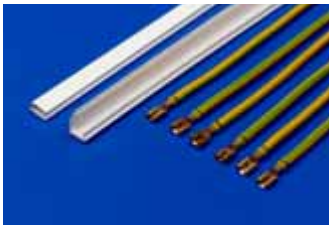
Packs of	Model No. SZ
1	**2570.500**

Complete earthing kit

for DK-TS
To DIN EN 60 950/VDE 0805, Ø 4 mm^2,
$I_{max.}$ 40 A.
For system-compatible earthing of all enclosure parts on the enclosure frame according to VDE.
The earth conductors are pre-assembled ready for connection with connectors and cut to the right length.

Supply includes:
Assembly parts.

Packs of	Model No. DK
1 set	**7829.150**



Complete earthing kit

for TE
To DIN EN 60 950/VDE 0805, Ø 4 mm^2,
$I_{max.}$ 40 A.
For system-compatible earthing of all enclosure parts on the enclosure frame according to VDE.
The earth conductors are pre-assembled ready for connection with connectors and cut to the right length.

Supply includes:
Assembly parts.

Packs of	Model No. TE
1 set	**7000.675**

Earthing

Earthing kit

for TC Rack

For star earthing. With the pre-assembled earth conductors, star potential equalisation is easily integrated.

Supply includes:
Earthing cables 4 mm², to DIN EN 60 950/ VDE 0805, $I_{max.}$ 40 A.
Assembly parts for earthing leads, earth rail.

Packs of	Model No. DK
1 set	**7277.000**

Earthing kit

for QuickBox

Earth straps in the appropriate lengths to match the enclosure depth are included in the earthin set, for earthing all enclosuore panels on the wall mounting part. The earth strap is a fast-end connector which is quickly disconnected and conveniently accessible when the door is open.
In this way, the enclosure cover can be removed completely.

Supply includes:
Assembly parts.

For enclosure depth mm	Packs of	Model No. QB
300/400	5	**7502.240**
500/600	5	**7502.260**

PE busbar

695 mm long PE busbar with pre-fitted screws, including terminal clamps up to 6 mm² (fine wire conductors), 10 mm² (single wire or multi-wire conductors) and main terminal clamp up to 35 mm².

Packs of	Model No. SZ
1	**2364.000**

Accessories:

Rail mounting bracket,
see page 935.

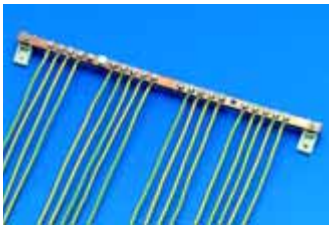
Earth rail, horizontal

Potential equalisation rail

Current carrying capacity approx. 200 A.

Supply includes:
Earth rail made from E-Cu 57 to DIN 1759, DIN 40 500, 15 x 5 mm,
20 connection points with M5 screws,
2 earth connections 25 mm²,
2 isolators, including assembly parts.

Length mm	Packs of	Model No. DK
450	1	**7113.000**



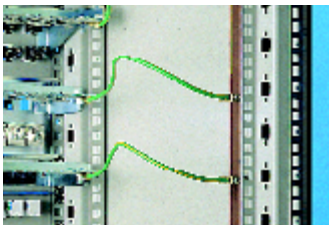
Earthing set, pre-assembled

for DK-TS

For star earthing. With the pre-assembled earth conductors on a potential equalisation rail, star potential equalisation is easily integrated into network enclosures.

Supply includes:
Earthing leads 6 mm²,
2 isolators, including assembly parts.

For TS enclosures up to W x H x D mm	Packs of	Model No. DK
800 x 2000 x 800	1 set	**7829.100**
800 x 2200 x 1000	1 set	**7829.110**



Earth rail, vertical

Potential equalisation rails
for network enclosures. Easily fitted to the 25 mm DIN pitch pattern of distributors or to the 482.6 mm (19″) mounting angles. The supplied earth conductors facilitate star earthing of the cable clamp straps in the patch panels.
The earth terminals are fully adjustable.
Current carrying capacity of rail approx. 200 A.

Supply includes:
Earth rail made from E-Cu 57 to DIN 1759, DIN 40 500, 15 x 5 mm, 16 conductor connection clamps 2.5 – 16 mm^2, 15 earthing leads 6 mm^2, L = 500 mm, including assembly parts.

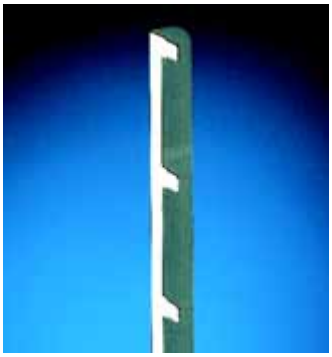
For enclosure height mm	Length mm	Packs of	Model No. DK
800	600	1 set	**7541.000**
1000	800	1 set	**7542.000**
1200	1000	1 set	**7543.000**
1400	1200	1 set	**7544.000**
1600	1400	1 set	**7545.000**
1800	1600	1 set	**7546.000**
2000	1800	1 set	**7547.000**
2200	2000	1 set	**7548.000**

Expansion kit

for earth rail, vertical
For system-compatible expansion of the star earthing on the vertical potential equalisation rail.

Supply includes:
Earthing leads 6 mm^2, pre-configured, with ring terminals and wire end ferrules. L = 500 mm, with earth terminals 2.5 – 16 mm^2, including assembly parts.

Packs of	Model No. DK
10	**7549.000**



Vertical potential equalisation rail

with 6.3 mm flat-pin connector
Rail for mounting parallel to the mounting angle. With a short cable connection, any 482.6 mm (19″) device (e.g. patch panel) may be held at the same potential by connecting the flat-pin connector.

Material:
Sheet steel, zinc-plated, passivated.

Supply includes:
Potential equalisation rail, pre-assembled connection cable 350 mm, connection cable with 6.3 mm flat-pin connector and lugs with 6 mm drilled hole, including assembly parts.

For enclosure height mm	Packs of	Model No. DK
1800	1 set	**7548.200**

ESD connection point

During maintenance or conversion work on the enclosure, dangerously high potential differences can occur. To protect sensitive electronic components, this standardised connection point (push-button) provides potential equalisation. The connection point is directly conductively connected to the enclosure frame via two screws.

Material:
Sheet steel

Supply includes:
Assembly parts.

Packs of	Model No. DK
1	**7752.950**

Cable entry

Cable entry plates

for
- Cable entry grommets
- Connector grommets

instead of segments of the standard divided gland plates.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Suitable for installation in TS, CM, CL and PC enclosures based on TS

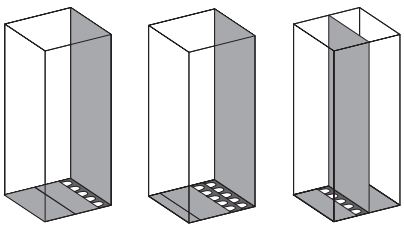
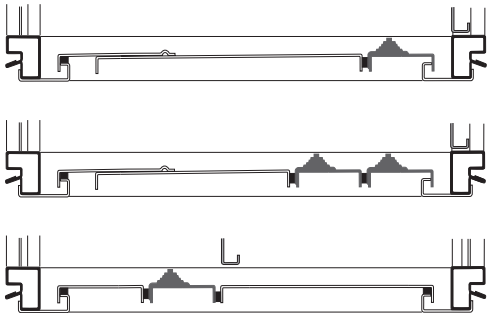
800	8	2	**8700.800**
1200	6	4	**8700.120**

Three examples from a wide range of possibilities
The diagrams show three TS examples for the positioning of cable entry plates instead of segments of the three-piece gland plates supplied as standard. This facilitates positioning to fit the mounting plate.
Thanks to the enclosure symmetry, where dimensions permit, cable entry plates may also be inserted in the enclosure depth, right and left, analogous to the gland plates.





Cable entry grommets

In conjunction with the cable entry plate, simple and fast sealing of cables inserted in the base area of enclosures.

Material:
Body: Polypropylene
Cover: Thermoplastic elastomer

Protection category:
IP 55 subject to correct mounting.

Cables per grommet	max. Ø mm	Packs of	Model No. PS

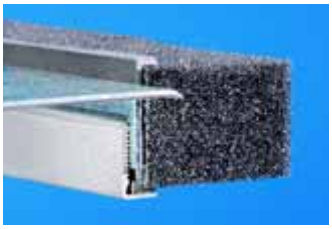
Italian patent no. 0 127 3503
French patent no. 2 716 583



Section for cable entry

for TS, CM, CL

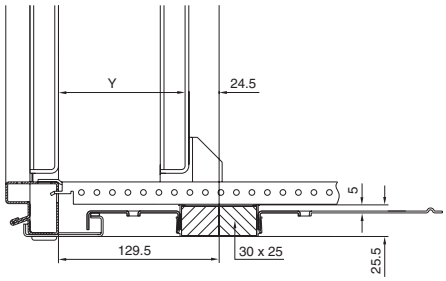
For mounting on top of the gland plates already in the enclosure. The better alternative to the foam rubber cable clamp strip, thanks to:

- Easier mounting
- Full-surface support
- High level of sealing of cables inserted into the enclosure.

Material:
Extruded aluminium section,
seal PU foam,
cross-section: 30 x 25 mm

Protection category:
IP 55 subject to correct mounting.

For Enclosure width mm	Packs of	Model No. TS
600	2	**8802.060**
800	2	**8802.080**
1000	4	**8802.100**
1200	4	**8802.120**



Y = Mounting plate depth-adjustable
on a 25 mm pitch pattern (final pitch 30 mm).

Foam rubber cable clamp strip

For sealing the cable entry between the gland plates. Particularly suitable for identical cable cross-sections.

Material:
Seal PU foam,
cross-section: 30 x 30 mm

Protection category:
IP 55 subject to correct mounting.

Packs of	Model No. SZ
3 m	**2573.000**

Gland plates

EMC gland plates

see page 958.

Plastic cable gland plates

With prepunched PG holes for cable glands.
Used for sealing standard gland plates.
Temperature range:
suitable for use from –40°C to +70°C.

Gland plate

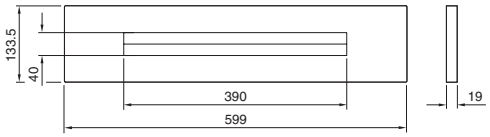
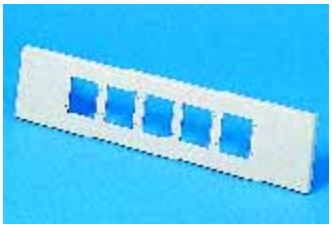
with brush insert, for EL
Multi-folded and welded gland plate with foamed-in seal and plastic brush inserts for simple cable entry.

Material:
1.5 mm sheet steel

Colour:
RAL 7035

Packs of	Model No. DK
1	7705.035





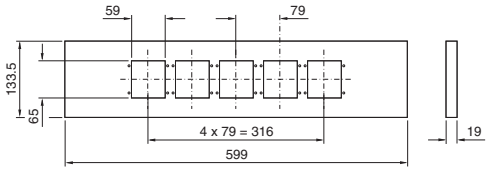
Gland plate

for PG segments, for EL
Multi-fold and welded gland plate with foamed-in seal and cut-outs for PG segments.

Material:
1.5 mm sheet steel

Colour:
RAL 7035

Packs of	Model No. EL
1	**2235.005**



PG segments

for EL
Plastic segments with pre-punched, knock-out holes for cable glands.
Suitable for retrospective screw-fastening to gland plate EL 2235.005.

Material:
ABS, self-extinguishing to UL 94-V0

Colour:
RAL 7035

Brush strip

For individual instalation of enclosure panels, gland plates and panels. Cut-outs for cable routing at any given positions in the side panel, rear panel, doors, roof and gland plate may be finished off attractively by simply attaching the brush strip.

Packs of	Model No. DK
2 m	**7072.200**

Technical specifications:
Bristle length: 30 mm
Plastic sheathing: 18 mm
Snap-on surface: 10 mm
Maximum cut-out height: 38 mm

Edge protector

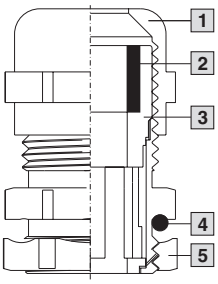
For covering sharp edges of cut-outs. Provides protection from injuries and prevents damage to inserted cables. The edge protector is suitable for material thicknesses of approx. 1.0 – 2.0 mm, and may be cut to length individually.

Material:
Plastic PVC

Colour:
Black

Packs of	Model No. DK
10 m	**7072.100**

Cable gland



Cable gland, brass

Benefits:

- Because the gland and lock nut are sold together in a single pack, this saves additional ordering work and storage locations.
- Clamping membranes for even tightening and strain relief which protects the cables.
- Insulation thanks to plastic insert.
- Optimum seal on the connection thread, thanks to O-ring.
- The lock nut cuts automatically into the spray-finish, thereby creating a conductive connection.

1 Top-hat nut
2 Neoprene seal
3 Plastic insert
4 O-ring
5 Lock nut

Size	Cable diameter mm	Packs of	Model No. SZ
M12 x 1.5	3 – 6.5	15	**2411.800**

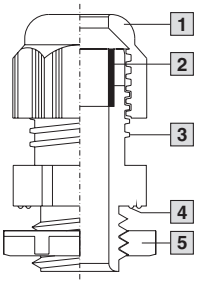
M50 x 1.5	27 – 38	2	**2411.860**
M63 x 1.5	34 – 44	1	**2411.870**

Material:
Nickel-plated brass, neoprene seal

Protection category:
IP 68 (5 bar, 30 min.) to EN 60 529/10.91

Approval:
VDE tested to EN 50 262



Cable gland, polyamide

Benefits:

- Because the gland and lock nut are sold together in a single pack, this saves additional ordering work and storage locations.
- Clamping membranes for even tightening and strain relief which protects the cables.
- Spray-moulded sealing lip ensures an optimum seal against the enclosure.
- Trapezoid thread for secure screw-fastening of the top-hat nut.

1 Top-hat nut
2 Neoprene seal
3 Trapezoid thread
4 Sealing lip
5 Lock nut

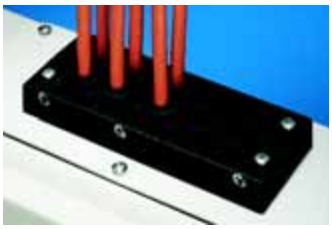
Cable gland



Connector gland

modular
For pre-assembled cables with connectors.
For mounting on 24-pole or 16-pole connector cutouts in:
- Module plates for TS divider panel
- Metal gland plates

Material:
Plastic to UL 94-V0

Protection category:
IP 54, provided the correct connector grommet is selected.

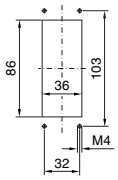
Supply includes:
Assembly parts.

Note:
Temperature range: –40°C to +120°C

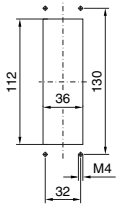
For Cutouts	For number of connector grommets	Model No. SZ
24-pole	10	**2400.700**
16-pole	8	**2400.710**

Accessories:

Module plates for TS divider panel,
see page 859.
Metal gland plates,
see page 969.



16-pole



24-pole

Connector grommets

To seal cables in conjunction with the connector gland and option of strain relief via cable ties.

Material:
Thermoplastic rubber

Protection category:
IP 54, provided the correct connector grommet is selected.

For cable diameter	Packs of	Model No. SZ
5 – 6 mm	10	**2400.720**
6 – 7 mm	10	**2400.730**
7 – 8 mm	10	**2400.740**

Solid	10	**2400.800**

Connector gland

for connector cutouts (24-pole)
For the entry of 2 pre-assembled cables in the connector cutout, without dismantling the connector.
For cable diameter from 8 – 36 mm.

Material:
Plastic
Clamp terminals: Sheet steel, zinc-plated, passivated

Supply includes:
1 set =
2 half-shells, including seals,
with fastening clamp.

Packs of	Model No. SZ
1 set	**2400.000**

Connector gland

For pre-assembled cables with connectors.
- For material thickness of up to 4 mm.
- Strain relief of the pre-assembled cables can be achieved with cable ties.

Material:
Plastic

Colour:
RAL 9005

Protection category:
IP 65 subject to correct mounting.

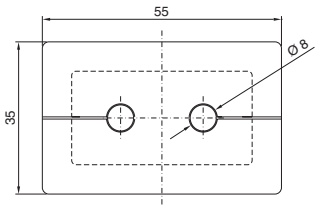
Supply includes:
Assembly parts.

To fit	Packs of	Model No. SZ
2 cables up to Ø 8 mm	1	**2400.300**
3 cables up to Ø 6 mm	5	**2400.500**

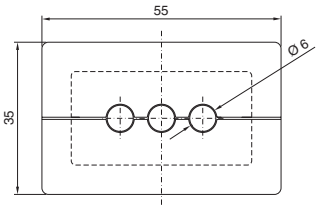
German patent no. 199 08 657

Rittal service:

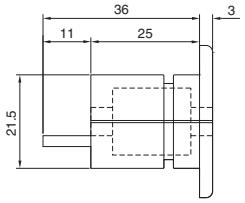
The cutouts may be made by our service centres.

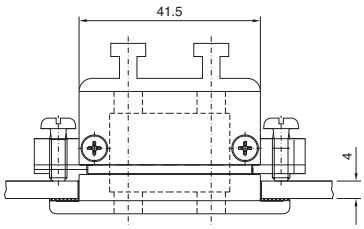


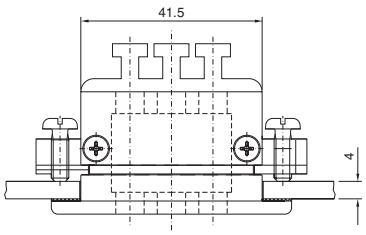
SZ 2400.300



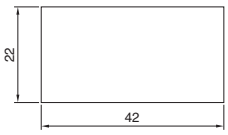
SZ 2400.500







Mounting cutout



Adaptor plate

for connector entry

To fit
- IW worktop, prepared for turntable or enclosure attachment
- Operating housing with mounting cutout CPL, round
- Surfaces.

With 4 studs M6 x 45 mm.

Material:
Sheet steel, zinc-plated, passivated.

Supply includes:
Seal and assembly parts.

Packs of	Model No. IW
1	**6902.660**

Also required:

Connector gland
SZ 2400.300 or SZ 2400.500,
see page 975.

Cable gland

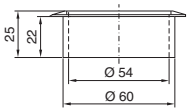
Cable gland

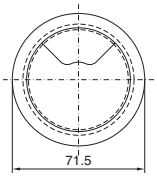
for IW worktops
To fit drilled holes 60 mm. For the entry of cables with pre-assembled connectors, the rotating flap and cover are easily removed.

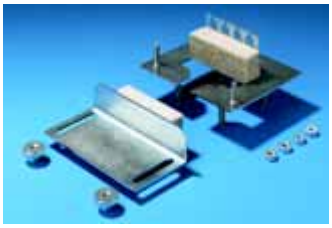
Material:
Plastic

Colour:
RAL 7035

Packs of	Model No. IW
1	6902.770







Cable gland module

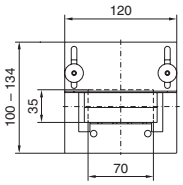
CP-L, Ø 130 mm
Use with the support arm cutout CP-L, round, only with enclosures mounted on the wall, for sealed cable entry. May also be mounted retrospectively with the cables already inserted.
Fitted with T-heads for cable clamping. Particularly well-suited to cables with identical cross-sections.

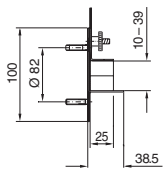
Material:
Sheet steel, zinc-plated, passivated.

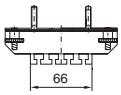
Supply includes:
Assembly parts.

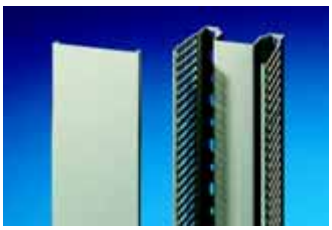
Packs of	Model No. CP
1 unit	6052.500

Note:
Mounting cutout CP-L, Ø 130 mm,
see page 190.









Cable duct

for vertical TS profile

For direct mounting on the vertical enclosure section.

Width 50 mm,
for assembly on a vertical enclosure section in the area of the side panel.

Width 100 mm,
for assembly on two bayed enclosure profiles in the baying area. Baying brackets and baying clamps which have already been fitted can be covered over with the cable duct.

The nominal break points of the members are also oriented towards combination with the cable ducts for mounting plates; in addition a further nominal break at the level of the mounting plate enables direct insertion into the cable duct.

The cable duct fastening points are co-ordinated with the TS system hole pattern; elaborate drilling, as in the case of DIN ducts, is dispensed with.

Width mm	Height mm	Packs of	Model No. TS
50	1600	8 sets	**8800.570**
50	1800	8 sets	**8800.520**
100	1600	4 sets	**8800.540**
100	1800	4 sets	**8800.510**

Technical specifications:
Depth: 80 mm
Length:
- 1,600 mm (for enclosure height 1,800 mm)
- 1,800 mm (for enclosure height 2,000 mm)

can be shortened for other enclosure sizes.
Member width: 5.5 mm
Slot width: 4.5 mm

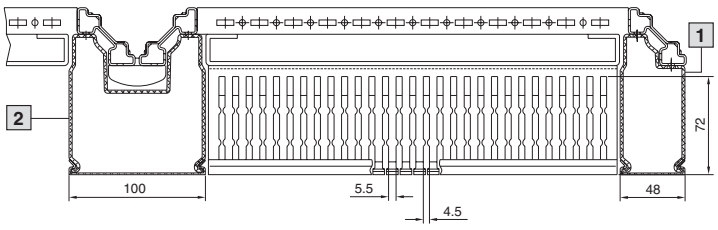
Material:
Hard PVC, hardly inflammable, self-extinguishing, temperature-resistant to +60°C.

Colour:
Similar to RAL 7030

Supply includes:
1 set =
1 cable duct with cover.

Accessories:

Plastic rivet for attachment,
see page 978.



1 TS 8800.570/TS 8800.520
2 TS 8800.540/TS 8800.510

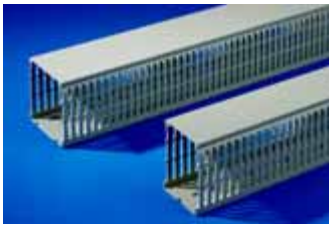
Cable management



Cable duct

for mounting plate

- To fit the cable ducts for vertical TS profiles. If the TS mounting plate is installed in the rearmost position, the horizontally mounted cable ducts are flush with the vertical ones.
- For external mounting on surfaces

Technical specifications:
Depth 80 mm
Length:
- Sized to the width of the TS, CL and ES mounting plates
- 2,000 mm

Bar width: 5.5 mm
Slot width: 4.5 mm

Material:
Hard PVC, hardly inflammable, self-extinguishing, temperature-resistant to +60°C

Colour:
Similar to RAL 7030

Supply includes:
1 set =
1 cable duct with cover.

Accessories:

Plastic rivet for attachment,
see page 978.

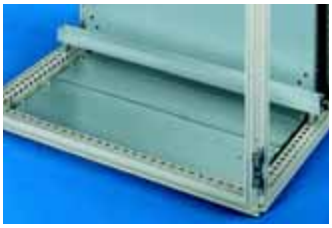
Plastic rivet

Easily mounted with a standard commercially available blind rivet tool.
For fastening the cable ducts in the
- TS system hole pattern
- Drilled hole Ø 4.5 mm

Packs of	Model No. TS
100	**8800.530**



Cable clamp rails

Right angle section
For strain relief with cable entry. Depth-variable mounting on a 25 mm pitch pattern on the horizontal enclosure section or in side base/plinth trim panels with assembly bolts.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For TS, ES, PC, AP universal console, base/plinths

Enclosure width mm	Length mm	Packs of	Model No. PS

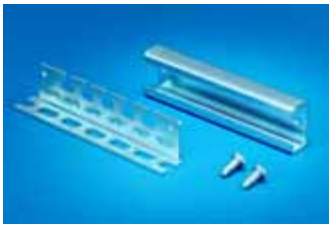
46 – 50	25	**2360.000**

Possible alternative:

Rail for EMC shielding bracket and strain relief,
see page 957.

Cable management



Cable clamping bracket

For installing in the operating housing with mounting cutout CP-L and CP-XL.
Cable clamping optionally via:

- Cable clamps
  or
- Cable tie SZ 2597.000
- Commercially available cable ties.

Bracket height = 25 mm with fitted C rail 40 mm.

Material:
Sheet steel, zinc-plated, passivated.

Supply includes:
C rail
and screws.

Packs of	Model No. CP
1 set	**6052.000**

Accessories:

Cable clamps,
see page 981.
Cable ties,
see page 982.

C rails

may be found under rail systems
from page 928.

Cable clamp rails

see page 983.

Combination rails

For cable clamping and routing.
Cables and leads can be fastened to the hammer heads top and bottom with cable ties. In addition, the C section of the combination rail will accommodate cable clamps with inserts.

Material:
Aluminium

Supply includes:
Assembly parts.

For Enclosure depth mm	Length mm	Packs of	Model No. QB
300/400	200	6	**7502.302**
500/600	400	6	**7502.304**

For Enclosure width mm	Length mm	Packs of	Model No. QB
600	400	6	**7502.304**

Accessories:

Cable ties,
see page 982.
Cable clamps,
see page 981.

Cascade cable routing

for frame attachent
for DK-TS, FR(i)
Professional cable routing system for cascading of cables in several levels of the enclosure depth. The cables are attached to the C rail by means of clamps. Suitable for installation on the inner enclosure level.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
6 mounting brackets and 3 C rails, including assembly parts.

For Enclosure width mm	Packs of	Model No. DK
600	3	**7831.570**
800	3	**7831.571**

Accessories:

TS punched section with mounting flange for the inner or outer attachment level,
see page 921.
PS punched section without mounting flange for vertical mounting in the enclosure frame,
see page 925.
Cable clamps,
see page 981.

Cable clamps

for C rails
For attaching the cables to the C rails.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Plastic insert.

For Cable diameter mm	Packs of	Model No. DK

Cable conduit and cable conduit holder

For secure cable routing e.g. from the enclosure or mounting plate to the door. Option of attaching the cable conduit holder tailored to system punchings TS and to 482.6 mm (19″) pitch pattern with no drilling required.
Attachment facility for standard commercially available cable ties is provided on the cable conduit holder, so that cables may be attached upon entry to/exit from the cable conduit.

Material:
Cable conduit: Polythene
Cable conduit holder: Polyamide

Cable conduit holder:
German patent no. 37 60 110
European patent no. 0 257 367
with validity for DE, ES, FR, GB, IT
US patent no. 4,779,828

Cable conduit

Internal Ø mm	Packs of	Model No. SZ
16	25 m	**2595.000**
29	25 m	**2589.000**
36	25 m	**2596.000**
48	25 m	**2590.000**

Cable conduit holder

For cable conduit Ø mm	Packs of	Model No. SZ
16	20	**2593.000**[1)]
29	20	**2591.000**[1)]
36	20	**2594.000**
48	20	**2592.000**

[1)] Installation in compact enclosures AE with universal bracket SZ 2373.000,
see page 935.

Cable management

Cable fastening

For professional, secure fastening of cables and conduits.

For fastening:
- Slide into the mounting rail 23 x 23 mm
- screw-fasten onto the round punchings of the enclosures, as well as all punched rails and punched sections.

As the fastening attachments are bayable, several fastening attachments, even those of different sizes, can be assembled using just 2 screws.

Material:
Polyamide

For Cable diameter from – to mm	Packs of	Model No. PS
6 – 9	50	**4319.090**
9 – 12	50	**4319.120**
12 – 16	50	**4319.160**
16 – 20	50	**4319.200**

Also required:

Posidrive raised countersunk screw M5 x 12 mm, SZ 2488.000, for screw-fastening to the round system punchings,
see page 937.

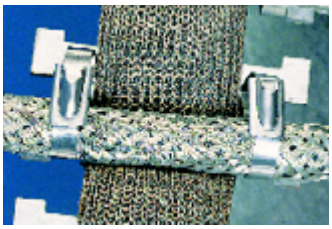
Accessories:

Punched rail 23 x 23 mm,
see page 925.

Cable ties

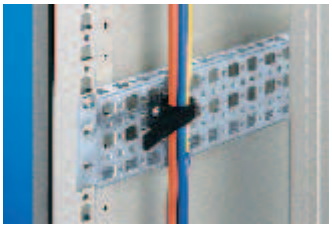
The super-fast solution for fastening cables to the enclosure profile or mounting system parts. Simply clip into the round system punchings.

Length mm	Packs of	Model No. SZ
150	100	**2597.000**



Metal cable ties

see page 958.



Nylon loop

With the nylon loop, secured cables are easily released, allowing individual cables to be added or removed. Ideal for sensitive data cables (fibre-optic/Cu), as it avoids indentations on the cable sheathing.
In addition, the nylon loop may be screw-fastened to the round system punchings.

Colour:
Black

Width mm	Length mm	Max. cable diameter mm	Packs of	Model No. DK

16	300	90	10	**7072.240**

Also required:

Screw SZ 2486.500 for screw-fastening to the round system punchings,
see page 937.

Cable tie fastener

for round system punchings and VIP 6000

For all commercially available cable ties up to a tie width of 4.8 mm.

Simply insert into the round system punchings or into the screw channel, and secure by hammering down the split rivet.

Material:
Polyamide 6.6

Packs of	Model No. CP
100	**6059.000**

Cable tie fastener

for Optipanel

For secure cable routing of all standard commercially available cable ties up to a tie width of 4.0 mm.

Secured in the T channel by rotating through 45°.

Material:
Polyamide 6.6

Packs of	Model No. CP
100	**6059.500**

Cable clamp rails

for TS and 482.6 mm (19″) mounting frames
The cables may be attached to the cable clamp rails with cable ties or nylon tapes. The cable clamp rails are simply located onto the frame section and may be additionally secured with a screw.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Accessories:

Cable ties, see page 982.
Nylon loop, see page 982.

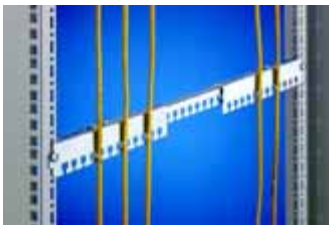
Cable management



Cable clamp rails, depth-variable

for TS and 482.6 mm (19″) mounting frames
For strain relief of the routed cables. The cables may be attached to the cable clamp rails with cable ties or nylon tapes.
The cable clamp rails may be located directly on a 482.6 mm (19″) mounting frame horizontally at the rear or in the enclosure depth between two mounting frames. An additional screw-fastening secures the unit.
The depth variability of the rails facilitates flexible adaptation of their length to the existing attachment distance between the two 482.6 mm (19″) mounting frames.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

19″ distance between levels mm	Packs of	Model No. DK
445 – 695	4	**7858.160**
620 – 1015	4	**7858.162**

Accessories:

Cable ties,
see page 982.
Nylon loop,
see page 982.

Shunting ring, plastic

For flexible cable routing, in two materials and three size variants.
Option of mounting to the 482.6 mm (19″) enclosure and swing frame profile of the data distributor, to the system strips of FM distribution enclosures, to all patch panels, to the Rittal Data Rack and all components on a 25 mm DIN pitch pattern.

Polyamide version:
Infinitely variable mounting thanks to a longitudinal slot. The shunting ring DK 7218.035 may also be used on 1 U patch panels.

Colour:
RAL 7035

Material	Dimensions mm	Packs of	Model No. DK
Polyamide	70 x 44	10	**7218.035[1)]**
Polyamide	105 x 70	10	**7219.035[1)]**
Polycarbonate	95 x 50	10	**7228.035**

[1)] German patent no. 44 13 124

Polycarbonate version:
Variable mounting. With 45° attachment the cable shunting ring may be attached to a 1 U panel.

Colour:
RAL 7035

Possible alternative:

Cable management panel, 482.6 mm (19″), 1 U,
see page 989.

Cable shunting ring

For flexible, system-compatible cable routing at the side of the 482.6 mm (19″) mounting frame.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Dimensions mm	Packs of	Model No. DK
120 x 80	10	**7111.900**
120 x 60	10	**7111.000**
80 x 37	10	**7112.000**

German patent no. 38 13 002

Cable management

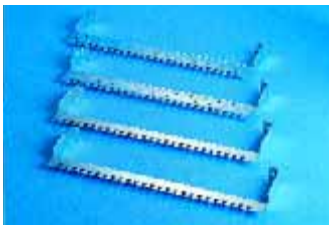
Shunting ring

To accommodate large quantities of cables. Shunting ring for side attachment to 482.6 mm (19″) sections and 482.6 mm (19″) mounting frames in 800 mm wide network enclosures. The ring is attached asymmetrically, with $^{1}/_{3}$ in front and $^{2}/_{3}$ behind the 482.6 mm (19″) front mounting angle. In this way, even large quantities of cables can be effectively managed.

Material:
Round steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Dimensions mm	Packs of	Model No. DK
300 x 90	4	**7220.600**



Cable clamp straps

for patch panels
To provide strain relief of incoming or outgoing data cables. Optionally available with spring brackets for accommodating and contacting the cable screen. Connection to the patch panel is by means of bolts on the panel itself.

Material:
Sheet steel 2 mm, zinc-plated, passivated

Supply includes:
Assembly parts.

Design	Model No. DK
Without cable screen contact	**7610.000**
With spring clips for contacting the cable screen	**7611.000**

Rail spacing brackets

for patch panels
For fastening punched rails PS 4170.000 with 2 U nuts PS 4179.000, as cable clamps or cable routing directly behind the panel.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. DK
12	**7110.000**

Extended delivery times.

Accessories:

Mounting rails,
see page 925.
Sliding nut M6,
see page 936.

Cable management

Fibre-optic shunting rings

The inner body is grooved, and fibre-optic shunting or jumper cables can be inserted into these. A rubber ring holds different fibre-optic cables with diameters of up to 4.5 mm. Strain relief and bending radius are ensured. Length: 120 mm.

Material:
Plastic

Colour:
Outside: RAL 7035
Inner body: Black

Supply includes:
2 shunting rings,
2 rubber rings,
baying kit,
including mounting accessories.

Assembly:
The supplied mouting brackts are suitable for universal use; the fibre-optic cables can be routed to the patch panel in all directions in various mounting positions:

1

2

3

4

1 At the side, directly on the patch panel

2 In front of the patch panel

3 At the side next to the patch panel

4 Behind the patch panel

Packs of	Model No. DK
2	**7116.500**

German patent no. 196 48 489
German patent no. 196 48 490

Possible alternative:

Fibre-optic cable management panel 482.6 mm (19″) 1 U,
see page 992.

Cable route

For cable routing between two 482.6 mm (19″) mounting angles in bayed enclosure suites (enclosure width 800 mm, mounting angles fitted centrally). Suitable for L-shaped and cranked mounting angles.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Packs of	Model No. DK
1	**7827.050**

Surplus cable holder

For fastening at the rear area of the enclosure, or at the side of network enclosures. The surplus cable holder can be attached to all depth stays or to punched sections and rails with a 25 mm pitch pattern – mounting dimension 150 mm. Units may also be fastened to each other.

Material:
Sheet steel

Colour:
RAL 7035

W x H x D mm	Model No. DK
280 x 151 x 75	**7220.500**

Cable management

Cable management duct

for TS

For side cable routing. The cable management duct is attached to 482.6 mm (19″) mounting angles at the sides of the 800 mm wide TS network enclosure. For this purpose, the mounting angles must be mounted on installation brackets. Thanks to the removable front trim panel equipped with quick-release fasteners, cables can also be retrospectively removed or added.

Dimensions:
W x D: 95 x 94 mm

Material:
Sheet steel, spray-finished

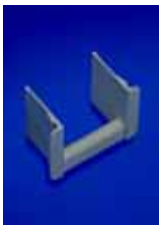
Colour:
RAL 7035

Supply includes:
Assembly parts.

U	For enclosure height mm	Model No. DK
31	1600	**7827.333**
36	1800	**7827.338**
40	2000	**7827.342**
45	2200	**7827.347**

Also required:

Installation brackets TS for mounting angles, see page 1009.



Cable routing components

for FR(i)

For snap-fastening into the vertical frame channel.

Type 1:
With horizontal bar for attaching the cables in the frame channel.

Type 2:
Additionally with semi-circular bead for kink-free cable entry and exit.

Type	Packs of	Model No. DK
1	10	**7218.100**
2	10	**7218.105**

Material:
Polycarbonate

Colour:
RAL 7035

Expansion kit

horizontal cable management
for FR(i)

Allows the enclosure frame to be extended in the depth by approximately 100 mm. The space thereby acquired may be used for horizontal cable management between bayed enclosures.

Expansion kit

Packs of	Model No. FR
1 set	**7856.740**

Note:
Combination of the extension kit with divided doors is not possible.

Material:
Sheet steel, spray-finished

Colour:
RAL 7035

Supply includes:
1 set =
8 spacer supports, including assembly parts.

Trim panels

Enclosure height mm	Packs of	Model No. FR
2000	2	**7856.743**
2200	2	**7856.746**

Note:
Upon request, trim panels may be inserted on the outer sides of the bayed enclosure suites to protect the enclosures against unauthorised access.

Cable management

Mounting/cable management panel

for QB 3 U, 6 U with vertical 482.6 mm (19″) level

For structured cable routing or for mounting small components or distributors (such as hubs, switches etc.). The cable management panel is easily fitted in the front of the rear panel from the front.

Material:
Sheet steel

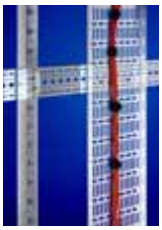
Colour:
RAL 7035

Supply includes:
Assembly parts.

Packs of	Model No. QB
1	**7502.270**

Accessories:

Nylon loop, see page 982.
Cable ties, see page 982.



Cable route

Universal cable tray. Ideal for network enclosures with large quantities of cable.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Width mm	Length mm	Packs of	Model No. DK
150	1700	1	**7858.150**
200	1700	1	**7858.152**
300	1700	1	**7858.154**

Accessories:

Nylon loop, see page 982.
Cable ties, see page 982.

Cable glands

for fibre-optic technology

The standard sizes PG 7 and PG 13.5 have a slotted inner seal. This allows super-easy cable entry. Ideal for routing break-out cables, as this eliminates unnecessary bending of the fibre-optic cables.

Material:
Cable gland: Brass, nickle-plated
Inner seal: Soft PVC insert

Fibre-optic cable glands	Packs of	Model No. DK
PG 7	12	**7455.010**
PG 13.5	12	**7455.030**

Cable management panel 1 U

42 HP (1/2 19″)
for RNC, RiCase
For horizontal cable routing.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Tray and 5 shunting rings.

U	Model No. DK
1	**7502.610**

Entry panel 1 U

42 HP (1/2 19″)
for RNC, RiCase
For system-compatible entry of patch cables which complies with the minimum bending radii. Cutout approximately 227 x 30 mm.

Material:
Sheet steel

Colour:
RAL 7035

Packs of	Model No. DK
2	**7870.730**

Cable management panel, 482.6 mm (19″), 1 U

482.6 mm (19″)
For horizontal management of the patching cables with 5 cable shunting rings, supplied loose.

Cable routing 482.6 mm (19″)

Cable management panel, 2 U

482.6 mm (19″)
The cable routing chamber has cutouts from above, into which the patch cables can be inserted. The cable management panel is equipped with a flap and quick-release fasteners at the front, for optimum access to the cables. From the rear, the cables can be inserted via a cutout with brush strips. With accommodation facility for cable clamp straps DK 7610.000 or DK 7611.000.

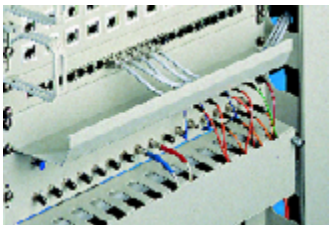
Material:
Sheet steel

Colour:
RAL 7035

U	Depth mm	Model No. DK
2	85	**7158.035**

Accessories:

Cable clamp straps,
see page 985.



Cable routing channel

482.6 mm (19″)
To hold the patching cables.

Material:
Sheet steel

Colour:
RAL 7035

U	Depth mm	Model No. DK
1	85	**7149.135**
3	100	**7149.035**

Other versions available on request.

Cable management panel, 2 U

To accommodated fibre-optic and copper cables. Fibres from the patch panels are placed into the tray via openings and may be distributed at the sides. Rounded openings protect the cable sheathing.

Material:
Sheet steel

Colour:
RAL 7035

U	Model No. DK
2	**7269.135**

Cable management duct, horizontal

482.6 mm (19″)

The duct facilitates concealed, simple cable routing of large quantities of cables to equipment within the 482.6 mm (19″) attachment level. Large cutouts ensure convenient, kink-free cable routing to the cables top and bottom.
For simple handling, the entire front panel may be removed via quick-release fasteners. After attaching the cables, these are held in position via nylon ties, whilst the duct may be resealed.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
5 nylon loops.

U	Model No. DK
2	**7158.100**
3	**7158.150**

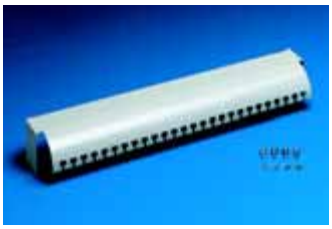
Cable tray, 2 U

For side routing and distribution of fibre-optic and copper cables. In this way, cables inserted into the roof area may be routed at the side of the mounting angles in the upper section of the rack. Depth 85 mm.

Material:
Sheet steel

Colour:
RAL 7035

U	Model No. DK
2	**7269.235**



Copper and fibre-optic cable management panel

The panel is attached between the cranked 482.6 mm (19″) mounting angles. The fibres are routed via the panel; minimum bend radii are maintained.
The hammer heads provide strain relief for individual cables.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

U	Model No. DK
2	**7269.335**

Other versions available on request.

Fibre-optic cable management panel, 2 U

482.6 mm (19″)

This panel supports routing of the fibre-optics whilst observing the minimum bend radii within horizontal and vertical cable management.

Material:
Sheet steel

Colour:
RAL 7035

U	Model No. DK
2	**7116.560**

Cable routing 482.6 mm (19″)

Fibre-optic cable management panel, 1 U

482.6 mm (19″)
The four fibre-optic cable shunting rings integrated into the front permit optimum management of up to 48 fibres.

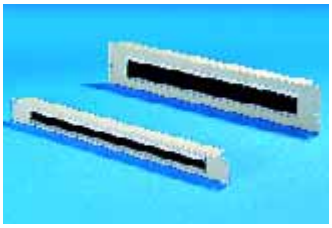
Material:
Panel: Sheet steel
Ring: Plastic

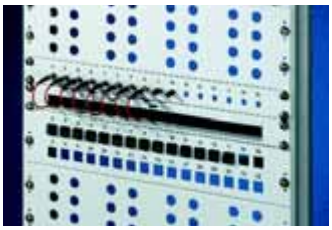
Colour:
Panel: RAL 7035
Cable shunting rings on the outside: RAL 7035
Black interior

U	Model No. DK
1	**7256.035**

Possible alternative:

Fibre-optic support guide DK 7116.500,
see page 986.





Cable entry panel

482.6 mm (19″)
Cutout 390 x 40 mm (2 U) or 390 x 20 mm (1 U) with brush insert. With accommodation facility for cable clamp straps DK 7610.000 or DK 7611.000.

Material:
Sheet steel

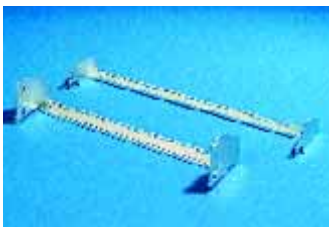
Colour:
RAL 7035

U	Model No. DK
1	**7140.535**
2	**7150.535**

Other versions available on request.

Accessories:

Cable clamp straps,
see page 985.



Cable routing across the 482.6 mm (19″) mounting level

There is a choice of five different cable clamping systems for system-compatible cable routing in 482.6 mm (19″) systems with one or two pairs of mounting angles:

C rail
for fastening across all 482.6 mm (19″) mounting angles.

Cable clamp rails
for fastening across all 482.6 mm (19″) mounting angles, for cable ties.

Cable clamp straps for large swing frames, and Data Rack,
the cable clamp straps are mounted on the frame at the rear, whilst the cables are clamped 250 mm behind the 482.6 mm (19″) mounting angles.

Cable clamp straps for DK-TS mounting angles,
with side lugs suspending from the cranked 482.6 mm (19″) mounting angles. Cable clamping is via cable ties.

Cable clamp strap for Rittal TC Rack,
for fastening across all 482.6 mm (19″) mounting angles, for cable ties.

Material:
Sheet steel, zinc-plated, passivated

C rail	Depth in mm	Model No. DK

Data Rack, and large swing frame	250	**7016.120**
DK-TS mounting angles	100	**7016.130**
TC rack mounting angles	100	**7875.400**[1)]

Packs of 6
[1)] Extended delivery times.

Also required:

With L-shaped TS mounting angles,
adaptor DK 7827.300 is additionally required,
see page 950.

Swing frame, small

for 600 mm and 800 mm wide TS enclosures
For mounting 482.6 mm (19″) equipment.
The front mounting situation, at the top or bottom of the enclosure frame, is achieved with the divider kit. The installation accessories required for other installation variants are described separately (see page 994).
With 800 mm wide enclosures, central or side-offset installation is possible.

Technical specifications:
Torsionally stiff frame, welded from rectangular tube and triple folded support section.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Cam with double-bit lock insert and parts for attaching to the divider kit.

Also required:

Divider kit for swing frame, small,
see page 994.

Accessories:

PS punched section without mounting flange
see page 925.
Support bracket TS,
see page 933.
Lock inserts, type D,
see page 888.
Plastic handle, type C,
see page 886.

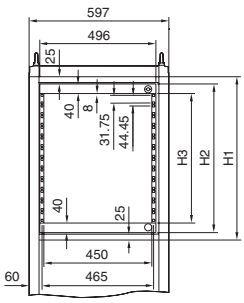
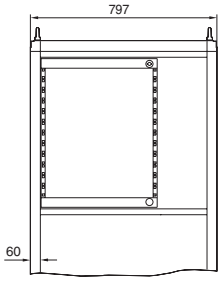
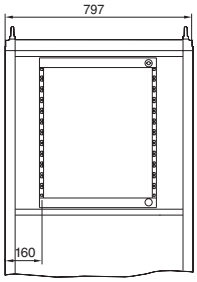
For 600 mm wide enclosures



For 800 mm wide enclosures optionally side or central

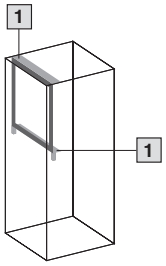




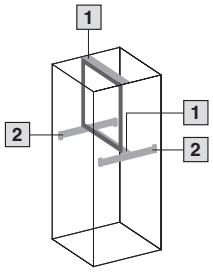
Swing frame

5 examples for TS

Partial installation in 600 and 800 mm wide enclosures,
in the foremost or rearmost position.

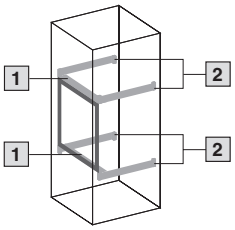


Front

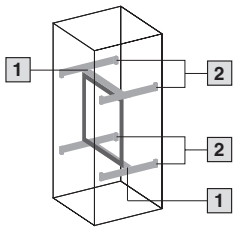


Set back

Partial installation, centre
in 600 and 800 mm wide enclosures.



Front



Set back

Also required:

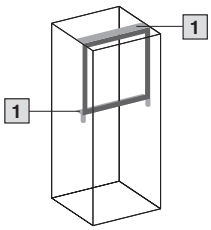
Depending on the installation position:

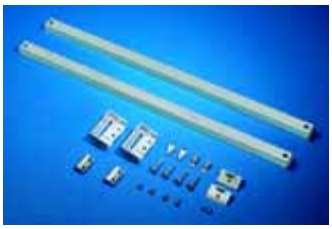
1 Divider kit for swing frame, small.

2 PS punched section without mounting flange 23 x 73 mm according to the enclosure depth in conjunction with 4 support brackets TS 8800.330 (2 included with the supply of the divider kit).

Note:
Height compensation between the 25 mm pitch pattern of holes in the enclosure and the height units of the swing frame is achieved by the support brackets TS (two are included with the supply of the divider kit).

Side installation
With an enclosure depth of 600 or 800 mm, side installation of a small swing frame is identical to installation parallel to the front.
For access to the swing frame we recommend the hinges for the TS side panel,
see page 854.





Divider kit

for swing frame, small, or hinge attachment for partial mounting plate in TS 8.

Material:
Cross member: Sheet steel, passivated
Support bracket TS: Die-cast zinc

Supply includes:
2 cross members,
including assembly parts.

Enclosure width mm	Model No. SR
600	**2377.860**
800	**2377.880**

Accessories:

Depending on the installation position
(see above):
Support brackets TS 8800.330,
see page 933,
and PS punched sections without mounting flanges to match the enclosure depth,
see page 925.

Divider kit

for swing frame, small in ES, AP universal console

Enclosure width mm	Packs of	Model No. SR

Accessories:

Depending on the installation position:
Support brackets PS 4183.000,
see page 933,
and PS punched sections without mounting flanges to match the enclosure depth,
see page 925.

Swing frame, large

without trim panel
for TS, ES, AK, AP universal console
For mounting 482.6 mm (19″) equipment.
The installation accessories required for other installation variants are described separately (see page 996).

Technical specifications:
Torsionally stiff frame, welded from rectangular tube and triple folded support section.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
2 cams with double-bit lock insert and parts for attaching to the divider kit.

Note:
If the enclosure height is not fully utilised by the swing frame, additional mounting accessories – see page 996 – will be required.

Also required:

Divider kit for swing frame, large,
see page 996.

Accessories:

Depending on the installation position:
TS punched section with mounting flange, 23 x 73 mm,
see page 922.
TS punched rail 18 x 38 mm,
see page 923.
Punched sections with mounting flanges,
see page 926.
Width divider,
see page 850.
Lock inserts, type D,
see page 888.

Height units	22 U	31 U	36 U	40 U	45 U
Model No. SR	**2322.700**	**2331.700**	**2336.700**	**2340.700**	**2345.700**

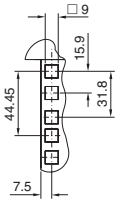
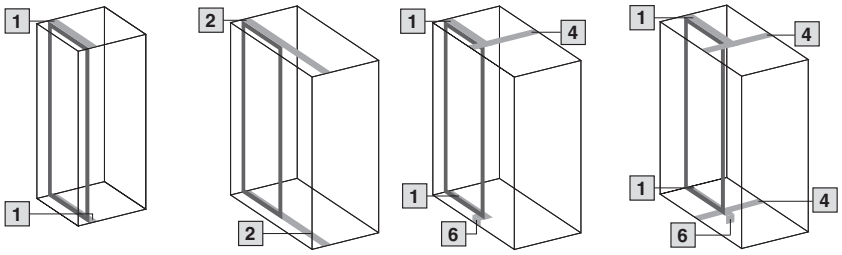
Cutout “X”



Swing frame

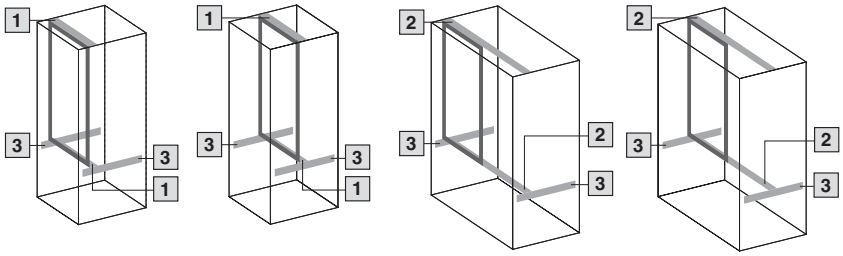
13 examples for TS

Full installation



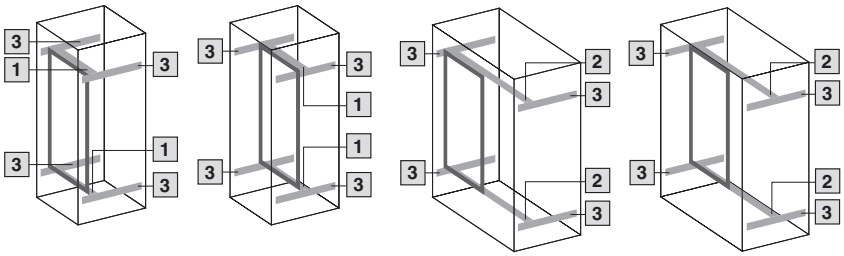
600 mm front | 1200 mm front | 1200 mm front with width divider | 1200 mm set back with width divider

Partial installation, top



600 mm front | 600 mm set back | 1200 mm front | 1200 mm set back

Partial installation, centre



600 mm front | 600 mm set back | 1200 mm front | 1200 mm set back

Also required:

Depending on the installation position:

1 Installation kit for 600 mm wide enclosures

2 Installation kit for 1200 mm wide enclosures

3 TS punched section with mounting flange 23 x 73 mm for the inner mounting level in the respective enclosure depth, for installation in ES = PS punched sections with mounting flanges

4 PS punched section without mounting flange in the respective enclosure depth in conjunction with support bracket PS

5 TS punched rail 18 x 38 mm in the corresponding enclosure depth[1)]

6 Width divider (left-hand or right-hand angle)[1)]

[1)] Not possible with ES, AK.

Notes:

- Height compensation between the 25 mm pitch pattern of holes in the enclosure and the height units of the swing frame is achieved by the upper divider kit.
- Partial installation at the bottom matches partial installation at the top.
- Only full installation at the front possible with AK.

Side installation

With an enclosure depth of 600 mm, side installation of a large swing frame is identical to installation parallel to the front.
For access to the swing frame we recommend the hinges for the TS side panel,
see page 854.

[1)] For: TS screw-fastened, removable/ES welded/AK not possible.

Swing frame, large

with trim panel
for TS, ES, AK

For mounting 482.6 mm (19″) equipment.
The installation accessories required for other installation variants are described separately (see page 994).

Technical specifications:
Torsionally stiff frame, welded from rectangular tube and six-folded support section. The side trim panels are screw-fastened to the frame. The right-hand trim panel has a handle strip at the side and is equipped with a locking rod system.

Material:
Sheet steel

Surface finish:
Frame, zinc-plated, passivated
Trim panels spray-finished

Colour:
RAL 7035

Supply includes:
Locking rod system with double-bit lock insert and parts for attaching to the divider kit.

Note:
If the enclosure height is not fully utilised by the swing frame, additional mounting accessories – see page 998 – will be required.
For two-door enclosures with height 1800 and 2200 mm the next-smallest swing frame must be installed, due to collision with the lock.

Also required:

Divider kit for swing frame, large,
see page 998.

Accessories:

TS punched section with mounting flange, 23 x 73 mm,
see page 922.
Punched sections with mounting flanges,
see page 926.
Lock inserts, version A,
see page 888.
Ergoform S lock system,
see page 885.

Also required:

Depending on the installation position:

1 Divider kit for 800 mm wide enclosures

2 TS punched section with mounting flange 23 x 73 mm for the inner mounting level corresponding to the enclosure depth, for installation in ES = PS punched sections with mounting flanges

Notes:

- Height compensation between the 25 mm pitch pattern of holes in the enclosure and the height units of the swing frame is achieved by the upper divider kit.
- Partial installation at the bottom matches partial installation at the top.
- Only full installation at the front is possible with AK.

Side installation

With an enclosure depth of 800 mm, side installation of a large swing frame is identical to installation parallel to the front.
For access to the swing frame we recommend the hinges for the TS side panel,
see page 854.

Swing frame, 482.6 mm (19″)

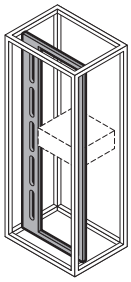
Heavy-duty version
for 800 mm wide enclosures, based on TS 8
The swing frame facilitates the accommodation of a wide range of 482.6 mm (19″) components up to a weight load of 350 kg. By swinging it out, access may be gained to the rear of the equipment and its cabling at any time.
At the side, the swing frame has a trim panel with integral handle strip and two-point locking bar. A semi-cylinder lock can be achieved by using the Ergoform-S handle system.
Several openings in the trim panel permit convenient cable routing from the rear of the swing frame in the front section. The openings may also be optionally top-mounted with standard commercially available plastic cable ducts.
An additional vertical row of holes integrated into the trim panel facilitates vertical and horizontal cable routing via cable shunting rings.
Installation is only possible in the form of full enclosure installation. The installation position may be varied in the enclosure depth.

U	For enclosure height mm	Model No. DK
40	2000	**7858.100**

Load capacity:
350 kg

Material:
Swing frame: Sheet steel, zinc-plated, passivated
Trim panel and divider kit: Sheet steel, spray-finished, RAL 7035

Supply includes:
Locking rod with double-bit lock insert, heavy-duty divider kit and assembly parts.



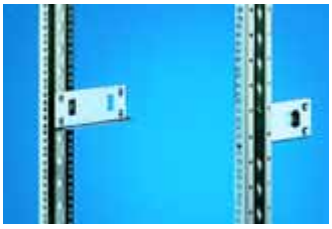
Swing frame stay

Holds the swing frame in the open position.

For mounting on:
Swing frame, large
- SR 1979.200, at the top of the enclosure
- SR 1980.200, at the bottom of the enclosure (with safety catch at 160°)

For mounting on:
Swing frame, small
- SR 1979.200, may be mounted at the top or bottom of the divider kit.

	Packs of	Model No. SR
With 130° hinge	5	**1979.200**
With 180° hinge	1	**1980.200**



Slide rails

To support heavy slide-in electronic equipment, 482.6 mm (19″) in the swing frame.

Material:
Sheet steel, zinc-plated, passivated

Mounting frame, 482.6 mm (19″)

for TS, FR(i)
The welded 482.6 mm (19″) mounting frame may be attached with complete depth variability and is used to structure the front and rear 482.6 mm (19″) level.
The mounting frame has the same system punchings as the TS 8 enclosure section at the sides and rear, and therefore supports the mounting of various TS 8 system accessories such as cable clamp rails, cable shunting rings etc.

Load capacity:
Up to 1,000 kg static load, with even load distribution on two 482.6 mm (19″) mounting frames, with full installation.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Note:
A combination of 482.6 mm (19″) mounting frame plus fan mounting plate is not possible. For active ventilation, we recommend use with modular fan roof.

Explanation of the fastening measurements in interior installations, see page 1020.

Mounting angles, metric

for TS
The L-shaped mounting angles accommodate metric assemblies and components. Depending on the installation kit, mounting dimensions 465 mm and 515 mm can be configured.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Explanation of the fastening measurements for interior installations, see page 1020.

Punched sections with mounting flange or depth stays for TS as installation kit for mounting angles,
see page 1008 – 1009.

Mounting kits for mounting angles

Mounting angles centre fastening attachment

for 800 mm wide TS network enclosures

The centre fastening attachment counteracts bending of the mounting angles mounted on installation brackets in case of unevenly distributed loads. It is attached directly to 482.6 mm (19″) mounting angles and to the punched section with mounting flange fitted in the depth (inner mounting level).

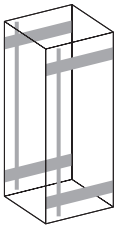
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. DK
2	**7284.135**

Also required:

TS punched section with mounting flange, see page 921 – 922.



TS punched section with mounting flange as installation kit

for

- **Mounting angles, 482.6 mm (19″)**
- **Mounting angles, metric, Mounting dimension 465 mm**

Installation in enclosure width 600 mm

The installation kit consists of 4 TS punched sections with mounting flange 17 x 73 to accommodate mounting angles. One pack is sufficient for installing one or two 482.6 mm (19″) attachment levels. For exceptionally heavy installed equipment, we recommend the installation of additional punched sections.

For enclosures		Packs of	Model No. TS
Width mm	Depth mm

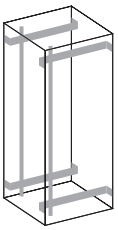
600	1000	4	**8612.000**

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.



Depth stays as installation kit

for

- **Mounting angles, 482.6 mm (19″)**

Installation in enclosure width 650 mm
Installation in enclosure width 800 mm

One installation kit consists of 4 depths stays to accommodated mounting angles. One pack is sufficient for installing one or two 482.6 mm (19″) attachment levels. For exceptionally heavy installed equipment, we recommend the installation of an additional depth stay in the centre. The front cutout makes cable routing easier with full configuration (cutout only at a width of 800 mm).

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

For enclosures		Packs of	Model No. DK

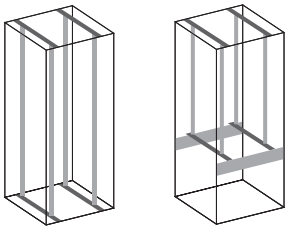
800	900	4	**7827.900**
800	1000	4	**7827.000**

Possible alternative:

Installation brackets TS for mounting angles, see page 1009.



Depth stay for TS

for

- **Mounting angles, 482.6 mm (19″)**

Installation in enclosure width 800 mm

Installation brackets are screw-fastened to the enclosure frame in the enclosure width. The mounting angle is attached to the bracket at the top and bottom. The bracket ensures optimum clearance at the sides for cable routing. For partial enclosure configuration, the installation brackets may be attached to the TS punched sections with mounting flanges 17 x 73 mm on the outer attachment level of the enclosure frame. Fully depth-variable attachment is facilitated by the attachment slots. Either cranked or L-shaped mounting angles may be used.

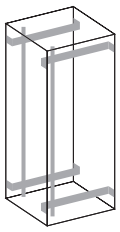
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. DK
2	**7827.480**

Accessories:

For partial installation,
TS punched section with mounting flange,
17 x 73 mm,
see page 921 – 922.



Depth stays as installation kit

for

- **Mounting angles, metric, Mounting dimension 515 mm**
- **Mounting angles, 482.6 mm (19″), Mounting dimension 21″**

Installation in enclosure width 650 mm
Installation in enclosure width 800 mm

One installation kit consists of 4 depths stays to accommodated mounting angles. One pack is sufficient for installing one or two 482.6 mm (19″) attachment levels. For exceptionally heavy installed equipment, we recommend the installation of an additional depth stay at the centre. The front cutout makes cable routing easier with full configuration (cutout only at a width of 800 mm).

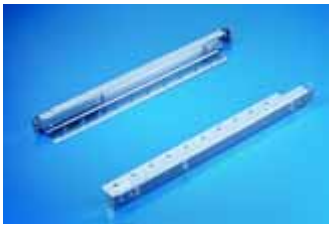
398	40	361	2	**7492.400**
498	40	461	2	**7492.500**

Note:
Not suitable for use in 482.6 mm (19″) mounting frames.

Also required:

For fastening to L-shaped TS mounting angles:
Adaptor DK 7827.300,
see page 950.



Depth-variable slide rails 1 U

for TS, FR(i), TE
with L-shaped mounting angles or 482.6 mm (19″) mounting frame
The slide rail facilitates integration of 482.6 mm (19″) components without loss of installation height.
Installation of the slide rail is independent from the chosen distance between levels, since the installation length may be flexibly adapted.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Length mm	Load capacity	Contact surface		Packs of	Model No. DK
		Width mm	Depth mm		
390 – 600	80 kg	50	330	2	**7063.878**

Server integration

Universal server installation kit, 482.6 mm (19″)

for TS, FR(i)

The universal server installation kit is ideally suited for integrating most standard server types into Rittal enclosures with L-shaped mounting angles and a minimum enclosure depth of 900 mm. The installation kit is specially designed to ensure free access to the 482.6 mm (19″) level, for securing the individual servers in the retracted position using the screws (M5) provided.
Distance between angles: 750 mm

For	Packs of	Model No. DK
all common server types	1 kit	**7063.100**

Load capacity:
80 kg, static load

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Also required:

Mounting adaptor depending on the server type.
For FR(i) and enclosures with two 482.6 mm (19″) mounting frames:
Installation kit DK 7063.102,
see page 1012.

Mounting adaptor

The adaptors (additionally required) allow servers to be secured to the universal installation kit using the original installation kits supplied by the server manufacturers. The adaptor should be chosen according to the server type being installed. This specific mounting adaptor allows problem-free configuration of combined systems and facilitates flexible use of the individual enclosures in future.

For server types	Packs of	Model No. DK
With front 482.6 mm (19″) server attachment	1 set	**7063.110**
With side attachment (SUN)	1 set	**7063.120**
With side attachment (HP rack system/E)	1 set	**7063.130**

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
1 set of mounting adaptors, sufficient for integration of an individual server, including assembly parts.

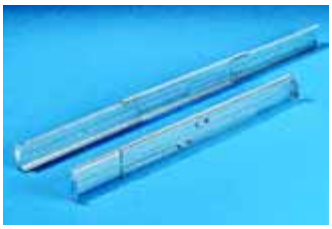
Installation kit

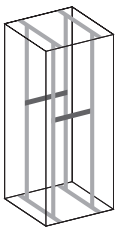
for FR(i) and 482.6 mm (19″) mounting frames

This installation kit makes it possible to mount the universal server installation kit DK 7063.100 both in FR(i) server racks and on two 482.6 mm (19″) mounting frames.

Material:
Sheet steel, zinc-plated, passivated

Packs of	Model No. DK
1 set	**7063.102**





Server rails, 482.6 mm (19″)

for TS network enclosures
with two 482.6 mm (19″) levels
Mounting is infinitely adjustable

Allows servers or active network components to slide into the enclosures, which can be screwed to the server rail via telescopic rails. The length of the server rails is fully adjustable between 550 to 850 mm.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Note:
Alternatively, the server rail may also be used as a depth-variable installation kit for 409 mm wide, 482.6 mm (19″) component shelves on both L-shaped and cranked mounting angles.

Adaptor, 3 U

Depth offset 100 mm
This adaptor is used to recess 482.6 mm (19″) mounting of equipment inside enclosures with 19″ installation in the foremost position, such as server or electronic enclosures. In this way, sufficient space can be gained in front of the mounting equipment to integrate patch panels or switches, whilst at the same time exploiting the maximum enclosure depth.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. DK
2	**7246.400**

482.6 mm (19″)/metric installation

Mounting kit, 2 U

For 482.6 mm (19″) equipment
Facilitates fast, simple integration of additional 2 U mounting space within an enclosure by attaching to the enclosure frame or to the existing mounting angles at the sides. The flexible slot fastening of the brackets means that the distance between the two installation brackets may be freely selected, so that other 482.6 mm (19″) attachment dimensions may be implemented. The second row of holes is used for the optional configuration of additional mounting surfaces.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. DK
2	**7246.420**

Adaptor, metric/482.6 mm (19″) 21″/19″

With this adaptor, 482.6 mm (19″) assemblies may be fastened to metric (535 mm) mounting angles, or combined systems may be configured.

Material:
Extruded aluminium section

Supply includes:
Assembly parts.

Mounting aid

For simple handling when installing network components or subracks. May be fitted to any 482.6 mm (19″) level using quick-release screws. Mounting equipment can securely be inserted and screw-fastened to the 482.6 mm (19″) mounting angles.
Mounting aids can still be easily removed.
It is advisable to commence component mounting from the top.

Material:
Sheet steel, zinc-plated, passivated

Build height	Packs of	Model No. DK

Supply includes:
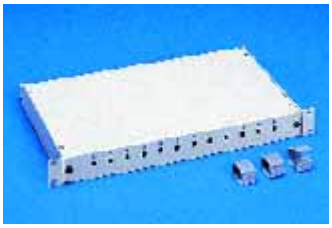
Holder with threaded bolts,
variable angle bracket, cassette cover,
knurled nut and assembly parts.



Fibre-optic splicing box, depth-variable

The 482.6 mm (19″) splicing box is designed to accommodate splicing cassettes and can be installed in any network distributor with 482.6 mm (19″) accommodation and used as a fibre-optic termination or distributor. The variable cassette fixture permits twist-proof installation of all standard splicing cassettes. The rear section of the splicing box is completely open for cable entry; a rubber cable clamp strip provides protection against dust. The fibre-optic cables can be secured with cable ties or cable clamps.
The splicing box is infinitely depth-adjustable up to 100 mm within the 482.6 mm (19″) flanges. In addition, the splicing box may be fully withdrawn from the 482.6 mm (19″) flanges. Two strain relief clips and cable routing clips for the fibre stock provide a solution to suit any fibre-optic wiring system.

U	Maximum no. of splicing cassettes	Model No. DK
1	2	**7241.005**

Fibre-optic splicing box with telescopic pull-out

lockable

The 482.6 mm (19″) splicing box is designed to accommodate splicing cassettes and can be installed in any network distributor with 482.6 mm (19″) accommodation and used as a fibre-optic termination or distributor. The telescopic pull-out provides optimum access to the splicing cassettes and cable clamp. The variable cassette fixture permits twist-proof installation of all standard splicing cassettes. The security lock fitted at the front protects against unauthorised access. The rear section of the splicing box is completely open for cable entry; a rubber cable clamp strip provides protection against dust. The fibre-optic cables can be secured with cable ties or cable clamps; two strain relief clips and cable routing clips for the fibre stock provide a solution to suit any fibre-optic wiring system.

for LSA strips
To accommodate
15 LSA profile dividing strips 2/10 on
2 rods, Ø 12 mm.
The fixture unit may be integrated in all 482.6 mm (19″) mounting levels. With cable clamp rail at the rear.

Dimensions:
W x H x D:
482.6 mm (19″) x 132.5 mm (3 U) x 175 mm

U	Model No. DK
3	**7050.200**

Material:
Side panels: Aluminium plates
482.6 mm (19″) side panels/cross rail:
Extruded aluminium section

Supply includes:
Fixture with rods as modular system.

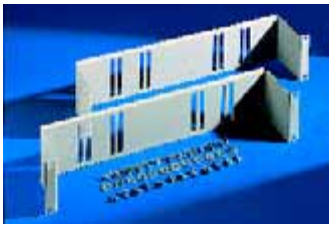
3 U support unit

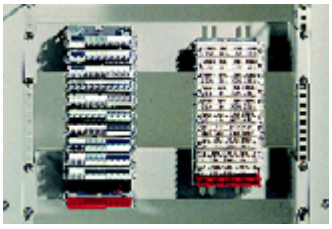
for LSA-Plus strips, max. 150 paired wires
To accommodate a maximum of 15 LSA-Plus strips (each with 10 paired wires). 3 x 5 LSA-Plus connection strips 2/10, series 2, may be installed horizontally. Strip length 124 mm, height pitch pattern 22.5 mm. The support unit may be integrated in all 482.6 mm (19″) mounting levels. The mounting level is recessed 100 mm behind the 482.6 mm (19″) flanges. Integral shunting rings enable tidy routing and distribution of the telecommunication cables.

U	Model No. DK
3	**7050.100**

Material:
Stainless steel

Supply includes:
Support unit, 8 shunting rings.





2 U accommodation system

for LSA installation kit
To accommodate LSA mounting troughs/cable retainers on the 482.6 mm (19″) mounting angle.

Dimensions:
Total depth: 98.5 mm
Height: 2 U

Material:
Sheet steel

Colour:
RAL 7035

U	Packs of	Model No. DK
2	2	**7050.035**

Accessories:

FM universal mounting bracket,
see page 811.

Handles, external mounting accessories

Clipboard

For securing operating instructions or plans (A4 size) at eye level.
Prepared for mounting on the right-hand side; mounting on the left is also possible by unscrewing and moving the clip part.
For mounting purposes, a straight tube length of ≥ 200 mm, 25 mm dia. is required.

Material:
Sheet steel, RAL 7035
Clip part: Aluminium, natural anodised.

Width mm	Height mm	Model No. CP
225	315	**6013.000**

Clipboard in conjunction with command panel VIP 6000:
European patent no. 0 839 093 with validity for DE, FR, GB, IT

Also required:

Handle set SZ 2389.000, see page 1030
or
Handle set VIP 6000, see page 1033
or
Handle set for Optipanel, see page 1031
or
U handle CP 6107.200, see page 1032.

Ring board

The alternative for attaching paper or plastic covers in A4 format, in either landscape or portrait format.
Board folded over on three sides and punched for mounting the assembly parts on the handle tube (length ≥ 200 mm, Ø 25 mm).

Material:
Sheet steel, RAL 7035
Ring strip, 16 mm: Sheet steel, plated

Width mm	Height mm	Model No. CP
225	315	**6013.500**

Also required:

Handle set SZ 2389.000, see page 1030
or
Handle set VIP 6000, see page 1033
or
Handle set for Optipanel, see page 1031
or
U handle CP 6107.200, see page 1032.

Display board with wall bracket

To accommodate test plans, documents etc. in A4 format.

Assembly:
- on surfaces,
- on a 25 mm pitch pattern of the TS frame or rail system,
- on the handle set.

Packs of	Model No. CP
1	**6013.100**

Supply includes:
10 display boards,
wall brackets and assembly parts.

Accessories:

Handle set SZ 2389.000, see page 1030
or
Handle set VIP 6000, see page 1033
or
Handle set for Optipanel, see page 1031
or
U handle CP 6107.200, see page 1032.

Handle set

For vertical and horizontal mounting on all surfaces.
Overall length: 420 mm.

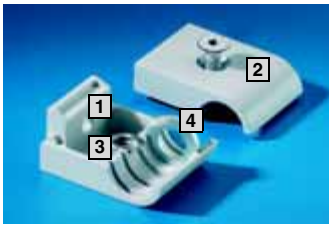
Material:
Handle tube: Aluminium, natural anodised.
Conduit holder: Die-cast zinc, RAL 7035

Supply includes:
1 set =
4 rail holders,
2 handle tubes.

Packs of	Model No. SZ
1 set	**2389.000**

Accessories:

Clipboard, ringboard, display board, see page 1030.



Rail holder

For mounting on surfaces, horizontal or vertical, also suitable for height-adjustable and/or swivel mounting of enclosures.
For 25 mm dia. sections made from
- Steel, seamless DIN 2448
- Aluminium to DIN 1795

as a handle or for limiting support surfaces.

Consisting of:

1 Assembly tray with one drilled hole and M8 screw and two pins as anti-twist guard.

2 Clamping tray with tolerance compensation and screw for tightening the rails.

3 Washer, small, prevents tensioning of the rails e.g. should it become necessary to remove the fitted ring board.

4 Washer, large, secures the uninhibited, rotating rail between the two trays to prevent it from falling out.

Material:
Die-cast zinc

Colour:
RAL 7035

Packs of	**Model No. SZ**
2	**2389.100**

Handle set

for Optipanel
For external mounting on corner pieces, also suitable for retro-fitting.

Material:
Handle tube: Aluminium, natural anodised.
Handle holder: Die-cast zinc, powder-coated in RAL 7035
Covers: Polyamide, RAL 7024

Note:
Shorter heights and widths can be achieved by cutting the handle tube to length.

For enclosures with 100 mm depth, cannot be mounted on the same side as the
- Support arm connection
- Interface flap
  (SZ 2482.200, see page 1059)

Accessories:

Clipboard, ringboard, display board
see page 1030.

For horizontal mounting

With front panel width	Packs of	**Model No. CP**
482.6 mm (19″)	1 set	**6385.010**
As specified	1 set	**6385.019**[2)]

Supply includes:
Handle tube, Ø 25 mm,
2 handle holders,
2 covers.

For vertical mounting

With front panel height	Packs of	**Model No. CP**
7 U	1 set	**6385.020**
7 U + 2 x 3.5 U[1)]	1 set	**6385.030**

[1)] Divided by 2 cross members for Optipanel.

[2)] Please additionally state when ordering:
– Number/dimensions of front panels
– Number of cross members/sealing bars or
– Model Number of enclosure

Supply includes:
2 handle tubes, Ø 25 mm,
4 handle holders,
4 covers.

Handles, external mounting accessories

Handles

For horizontal or vertical attachment to the enclosure panel of:
- VIP 6000 with combined or narrow front frame,
- Optipanel,
- other enclosures or
- surfaces.

Mounting holes and surfaces without fins are required for assembly purposes. For VIP 6000 version with fins, corresponding milling work can be carried out. With the operating/keyboard housing, please specify “Prepared for handle set CP 6107.XXX”.

Material:
Handle holder: Die-cast zinc, RAL 7035
Cover bungs: Plastic, similar to RAL 7035
Handle tube: Aluminium, powder-coated similar to RAL 9006.

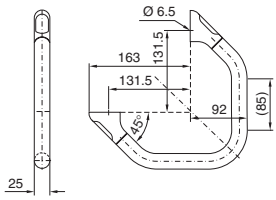
German patent no. 19 937 966
French patent no. 2 797 555
Italian patent no. 0 131 8210
US patent no. 6,507,978

Corner handle

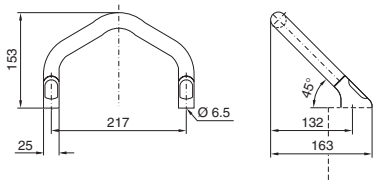
Supply includes:
4 handle holders,
2 handle tubes,
assembly parts.

Packs of	Model No. CP
1 set	**6107.000**

Mounting on enclosure corner



Mounting on straight surfaces
(90° rotation of handle holder)



U handle

Supply includes:
2 handle holders,
1 handle tube,
assembly parts.

Enclosure surface connector

To accommodate:
- Support for keyboards (SM 2383.000)
- Optipanel keyboard housing for front panel width = 482.6 mm (19″) CP 6384.009. Please state front panel height and installation depth (50 or 100 mm) in addition to Model No.

Material:
Extruded aluminium section, natural anodised
Side cover, sheet steel RAL 7024.

Supply includes:
Assembly parts.

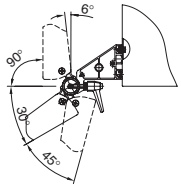
Packs of	Model No. SM
1 set	2383.010

Note:
Other widths available on request.

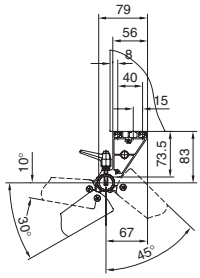
Also required:

Cross-brace for door,
see page 895.

Mounting on surfaces



Mounting underneath surfaces



Enclosure duct connector

for VIP 6000

To fit narrow and combined frames in conjunction with the keyboard housing 105 mm deep.

- The angle between the operating and keyboard housing is 120°.
- At the same time, the duct connector is used for cable routing from the operating housing to the keyboard housing.

Material:
Aluminium

Colour:
RAL 7035

Supply includes:
Assembly parts.

Weight kg	Packs of	Model No. CP
2.0	1 set	**6006.000**

Delivery times on request.

Note:
When retro-fitting, appropriate mounting holes and cutouts must be made in the operating and keyboard housings for assembly purposes.

Also required:

Cross-brace for door,
see page 895.

Cable tube, flexible

for VIP 6000

Suitable for cable routing from the operating housing to the keyboard housing.
Suitable for use with

- Frame connector, adjustable
- Hinged frame connector
- Frame connector, rigid
- Enclosure bar connector

May be mounted on the following keyboard housings:

- Keyboard housing: 105 mm
- Keyboard housing: 44 mm
- Keyboard housing: 27 mm
  with connection for flexible cable conduit (design 4.1, see page 166).

Corresponding cutouts are required for connecting the cable tube in the operating and keyboard housing.

A cable tube is included with the supply to selection 4.5, see page 169.

Colour:
RAL 7035

Supply includes:
Assembly parts.

May be cut to length for other dimensions.

Signal pillar, LED compact

red, yellow, green

Benefits:
- Complete, ready-to-connect solution
- Minimal build height of just 177 mm
- Extremely long service life of the LEDs (at least 70,000 h) – therefore maintenance-free
- Minimal assembly work and warehousing costs

Technical specifications:
Operating voltage: 24 V AC/DC
Electrical connection: Screw terminals
Light: LED
Transmission angle: 3 x 120°
Operating temperature: –20 to +70°C
Flashing function: Controllable via SPC
Cable entry: Metric cable gland
M12 x 1.5 for cable diameter 3.0 – 6.5 mm

Packs of	Model No. SG
1	2372.100

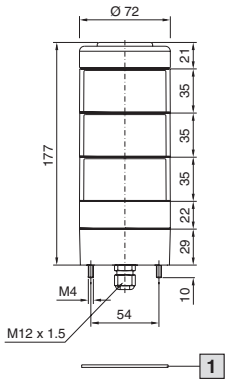
Protection category:
IP 65 to EN 60 529/10.91

Note:
- Design with acoustic component
- 1 to 4-stage version in various colour combinations
- Version with magnetic base

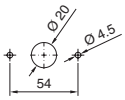
available upon request.

Also required:

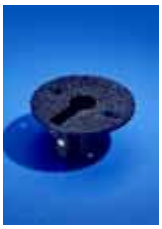
For wall/base mounting:
Bracket for wall mounting,
see page 1044.
For conduit mounting/support arm systems:
Busbar connection adaptor,
see page 1041.



Mounting cutout



1 Seal



Busbar connection adaptor

for signal pillar, LED compact
For conduit mounting and mounting on support arm systems.

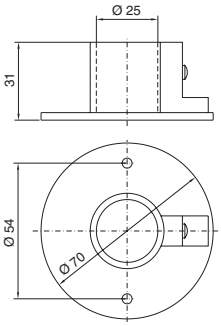
Black

Packs of	Model No. SG
1	2372.120

Accessories:

Mounting components for conduit mounting,
see page 1045.
Mounting components for support arm systems,
see page 1045.



Modular

Signal pillars, modular

Benefits:

- Simple assembly and contact via bayonet fastener.
- Configuration of up to five components with the same voltage.
- The incandescent lamps are replaced in seconds – no need for tools.
- Components are available in a range of colours and voltages.

For modular configuration from:

- Connection components
- Optical components
- Incandescent lamps/LED lamps
- Acoustic components
- Label panel

Connection component

for signal pillars, modular

Optionally for conduit or wall/base mounting. Screw terminals in the connection component. With cover for optical components. Contact hazard protection to VDE.

Material:
Enclosure of polyamide

Optical components

for signal pillars, modular
With 360° signal transmission thanks to optimised prism system.
Possible number of levels = 5 components, with the same voltage.
115 V components available on request.

Material:
Enclosure: polyamide
Cap: transparent polycarbonate

Protection category:
IP 54 if a cover or acoustic component is fitted at the top.

Also required:
Incandescent or LED lamps for steady and flashing light component,
see page 1043.

Optical components	Model No. SG				
Colour	Red	Green	Yellow	Clear	Blue

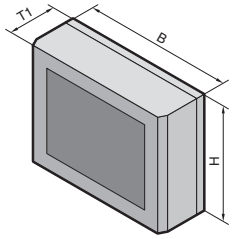
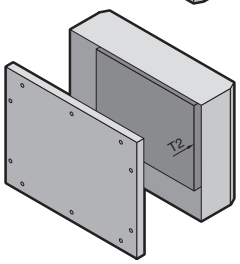
Monitors, keyboards





Premium TFT 17″, IP 69K

This high pressure cleaner-resistant complete solution is particularly well-suited for use in the food and hygiene sectors.

Technical specifications:
Resolution max.:
17″: 1280 x 1024 pixels,
VGA + SXGA non-interlaced
Colours: 16.7 million
Brightness: 250 cd/m²
Reading angle: 130° horizontal, 110° vertical
Contrast ratio: 300 : 1
MTBF backlight: 50,000 h
Voltage: 12 V DC
On Screen Display (OSD) at rear
VGA input: 15 pin D-Sub
Operating temperature: 0°C to +50°C

Material:
Stainless steel 1.4301

Surface finish:
Brushed, grain 240

Protection category:
IP 69K to DIN 40 050-9/5.93

Support arm connection	W (B) mm	H mm	D (T1) mm	D (T2) mm	Model No. SM
Bottom	530	360	120	70	**6450.100**
Top	530	360	120	70	**6450.110**

To order version in stainless steel 1.4404 (AISI 316L) please use Model No. SM 6450.5XX.
Delivery times on request.

Accessories:

Rear panel holder CP 6682.000,
see page 893.
Power pack SM 6450.050 and
connection cable SM 6450.060,
see page 1047,
if an operating voltage of 100 – 240 V AC is only available instead of 12 V DC.

TFT monitor

Installation variant for surfaces and command panels.
Particular benefits:
- High-quality industrial design
- Reduced installation work thanks to integral front frame
- No additional ventilation required
- Very small installation depth (73 mm).

Resistive touchscreen for operation with a pen, finger and glove.

Technical specifications:
Resolution max.:
15″: 1024 x 768 pixels, VGA + XGA non-interlaced
17″: 1280 x 1024 pixels, VGA + SXGA non-interlaced
Colours: 16.7 million
Brightness: 250 cd/m²
Reading angle: 130° horizontal, 110° vertical
Contrast ratio: 300 : 1
MTBF backlight: 50,000 h
Voltage: 12 V DC
On Screen Display (OSD) at rear
VGA input: 15 pin D-Sub
Operating temperature: 0°C to +50°C

Front frame:
Dimensions:
15″: W/H 430 x 343 mm
17″: W/H 482.6 x 354.8 mm
Aluminium, powder-coated in RAL 7035
Rear threaded bolts M5 (14 units)

Protection category:
IP 65 to EN 60 529/10.91, front

Supply includes:
Seal and hex nuts (for installation in surfaces) and VGA cables. Touchscreen with additional 5 V adaptor cable and driver CD-ROM.

	Model No. SM
Monitor 15″ [1]	**6450.010**
Monitor 17″ [1]	**6450.020**
Touchscreen 15″	**6450.030**

[1] With anti-reflection coated safety glass screen

Also required:

Mounting kit CP 6053.500
(for installation in VIP 6000 and Optipanel),
see page 1037.
Power pack SM 6450.050 and
connection cable SM 6450.060,
see page 1047,
if an operating voltage of 100 – 240 V AC is only available instead of 12 V DC.

Rittal service:

Matching Optipanel operating hounsings,
see page 178.
Mounted in command panels,
see page 173.

Possible alternative:

Unit consisting of TFT monitor and Premium Panel, specificly designed for the food industry,
see page 1046.

Power pack

for TFT monitor and touchscreen

- With IEC 320 socket,
- With connection cable (1.5 m) and connector for connecting to the TFT monitor.

Dimension: 107 x 30 x 59 mm.

Technical specifications:
Input voltage: 100 – 240 V AC
Output voltage: 12 V DC

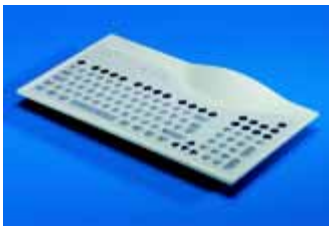
Packs of	Model No. SM
1	6450.050

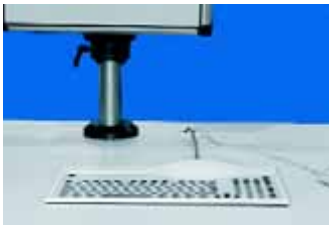
Material:
Enclosure: Plastic

Connection cable

for power pack
With IEC connector at one end,
length: 1.5 m.

Packs of	Model No. SM
1	6450.060





Desktop keyboard IP 65

Particularly well-suited to all areas with dusty or damp industrial atmospheres and places where hygiene is particularly crucial, such as in the food industry or medical technology.

- Sealed, wipeable surface finish.
- High level of mechanical and chemical resistance to DIN 42 115.
- Lenticular key caps and minimal typing force for optimum finger guidance and fast operation.

This makes it ideally suited for workstations where it is necessary to input large quantities of data.

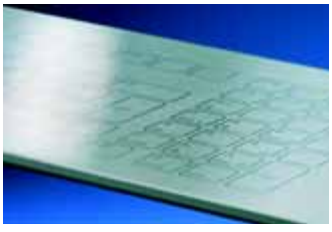
Supply includes:
Connection cable with PS/2 connector,
length 1.8 m.

	Model No. SM
Desktop keyboard	6446.000

Technical specifications:
Dimensions: 410 x 220 x 25 mm
105 keys
Actuation travel/force: 0.4 mm/2 N
Service life: ≥ 1 million switching cycles
Operating temperature: –20°C to +70°C
German layout

Rittal service:

Country-specific layout and USB connection available on request.



Stainless steel keyboard 19″/4 U

based on the piezo system.
With this innovative technology, merely tapping lightly with your finger is sufficent to initiate switching. There are no edges, cracks or hollows, as with conventional keyboards. This makes it particularly suitable for use in the food industry.

Technical specifications:
Dimensions of front panel:
482.6 x 177 x 3.7 mm
Installation depth 25 mm
105 keys
Actuation travel/force: 0 mm/0.7 N
Service life: ≥ 10 million switching cycles
Keypad: Abrasion-resistant electrolyte lettering
Operating temperature: –25°C to +75°C
PS/2 and USB connection
German layout

Material:
Stainless steel 1.4301

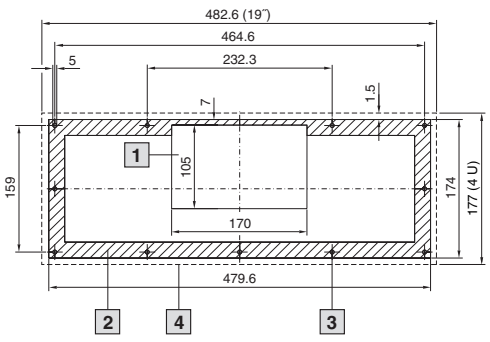
Protection category:
IP 69K to DIN 40 050/5.93

Supply includes:
1 connection cable, length 1.8 m,
with PS/2 connector and hex nuts.

	Model No. SM
Stainless steel keyboard	6446.010

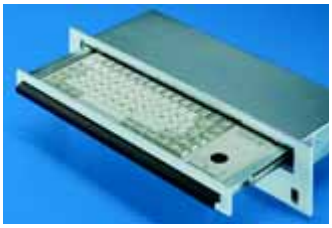
Rittal service:

Country-specific layout available on request.



1 Front panel cutout
2 Seal
3 Holes for fastening bolts
4 Contact surface

Monitors, keyboards



Keyboard, pull-out

with integral trackball
Super-slimline keyboard with cursor keys and trackball.

For installation in:
- Command panels VIP 6000 (see page 161) and Optipanel (see page 173) from installation depth 150 mm
- 482.6 mm (19″) systems
- Any sufficiently large surface (e.g. door, side panel)

Technical specifications:
- Keyboard:
  – 84 short-stroke keys, IBM-AT compatible (MF2), including cursor keys
  – With integral 16 mm trackball
  – German layout
  – Interface: 2 x 6-pole PS/2 DIN connector
  – Operating temperature: +5°C to +50°C
  – Storage temperature: –10°C to +60°C
  – Humidity: max. 95 % (no condensation)
- Front panel made from aluminium, with film similar to RAL 7035

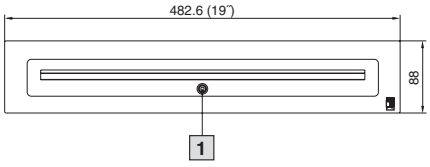
Protection category:
IP 65 (at the front, closed)
to EN 60 529/10.91

	Packs of	Model No. CP
Without lock	1	**6002.100**
With lock	1	**6002.110**

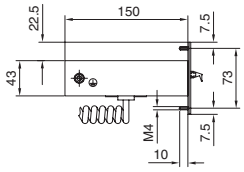
Note:
For sub-division of the operating front, a cross member is required for:
- VIP 6000 (see page 162, version 3.2). At the same time, the end trim (see page 163, version 3.4) must be selected.
- Optipanel (see page 174, version 2.2).

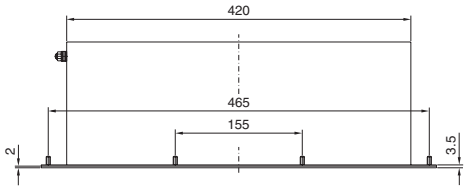
Accessories:

Standard double-bit lock insert may be exchanged for 27 mm lock inserts, version A, see page 888, and lock cylinders, version B, see page 889.

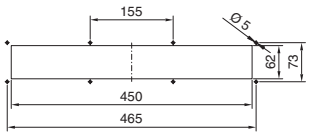


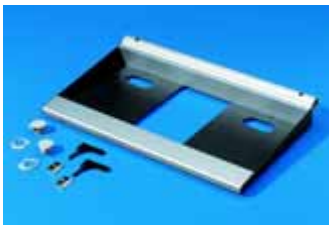
1 Optional lock (CP 6002.110)





Mounting cutout





Support

for keyboards
for max. 473 x 210 mm.
Prepared for
- Cable gland
- Support for mousepad, vertically hinged (SM 2383.020)

Material/surface finish:
Side parts: Sheet steel, RAL 7024
Front and rear:
Extruded aluminium section, natural anodised

Supply includes:
2 clamping screws, end stoppers, cover plate, cable entry grommet and nylon loop tape.

Rittal service:

Other widths available on request.
Fully mounted on the VIP 6000 (see page 160) or the Optipanel (see page 173) via the design code number.

Packs of	Model No. SM
1 set	**2383.000**

Also required:

For mounting on surfaces: enclosure surface connector, see page 1034.

Accessories:

Support for mousepad, vertically hinged, see page 1055.

Detailed drawing
for VIP 6000, see page 1100, for Optipanel, see page 1102.

Utility bars, vertically hinged

To support standard keyboards during programming and servicing work:
- min. width 300 mm
- max. depth 210 mm

For mounting beneath:
- VIP 6000 with narrow or combined frame
- Optipanel
- Command panel
- Command panel housing with door
- Adequately large surfaces (e.g. worktops IW)

to:
- Vertical services (doors/side panels)

After use, the utility bars fit securely and neatly under the mounting surface, thus giving the operator more space to move around.

Packs of	Model No. CP
1 set	**6514.200**

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Fold-out tray

for keyboard and mouse
For installation in
- 600 and 800 mm wide doors
- 482.6 mm (19″) swing frames and enclosures

Standard double-bit lock insert which may be exchanged for lock inserts 27 mm, version A, see page 888 and for lock cylinder SZ 2571.000, see page 889.

Material:
Cover: Sheet steel
Side parts: Cast aluminium
Tray: Extruded aluminium section

Surface finish:
Cover, side parts: RAL 7035
Tray: Natural anodised

Protection category:
IP 55 to EN 60 529/10.91

Accessories:

Mousepad support, pull-out, see page 1056.

Rittal service:

Other widths available on request.

Monitors, keyboards

Keyboard rack, 482.6 mm (19″)

- 482.6 mm (19″) rack-mounted chassis 1 U, 430 mm deep
- Prepared for the installation of 482.6 mm (19″) keyboards with touchpad or trackball with the following dimensions:
  max. height: 39 mm,
  max. width: 417 mm,
  max. depth: 210 mm
- Solid, lockable front
- Telescopic slides with integral clamp
- Prepared for installation of a mousepad

Material:
Sheet steel

Packs of	Model No. RP
1	**3659.520**

Colour:
RAL 7035

Supply includes:
482.6 mm (19″) chassis **excluding keyboard,**
connection cable,
mounting bracket for 800 and 900 mm enclosure depth,
assembly parts.

Mousepad

for keyboard drawer

- For optional mounting on the left, right or front of the keyboard drawer (fold-away design)
- Maybe folded into the keyboard drawer after use
- Only suitable for use in conjunction with 482.6 mm (19″) keyboards with a total height of max. 39 mm (Model No. RP 3659.590)

Material:
Sheet steel

Packs of	Assembly	Model No. RP

Keyboard, 482.6 mm (19″)

- Keyboard for installation in the 482.6 mm (19″) keyboard drawer in conjunction with the touch-pad mouse
- German keyboard layout
- 38.9 mm high keys facilitate installation in 1 U keyboard drawers
- PS/2 connector
- IP 20
- Touch-sensitive technology
- W x H x D = 405 x 38.9 x 180 mm
- 105 keys (including WIN 95 keys)
- Actuating force 0.6 N/4.0 mm
- Operating temperature: 0°C to 50°C

Packs of	Model No. RP
1	**3659.590**

Supply includes:
Connection cable.

TFT display, 15″

- 482.6 mm (19″) front panel 7 U, RAL 7035
- TFT LCD 15.1″
- Automatic brightness control depending on the ambient light
- Anti-reflection coated safety glass screen
- Brightness: 250 cd/m²
- On-screen display
- Colours: 16.7 million
- Power pack: Input voltage: 100 – 240 V AC, output: 12 V DC/3.75 A
- OSD membrane keyboard and infrared sensor
- VGA + SVGA, non-interlaced
- Maximum resolution 1024 x 768 pixels
- Contrast ratio: 300 : 1
- Viewing angle: 160° (H+V)
- Video input 15-pin D-SUB (analog RGB)
- RS 232 monitor interface

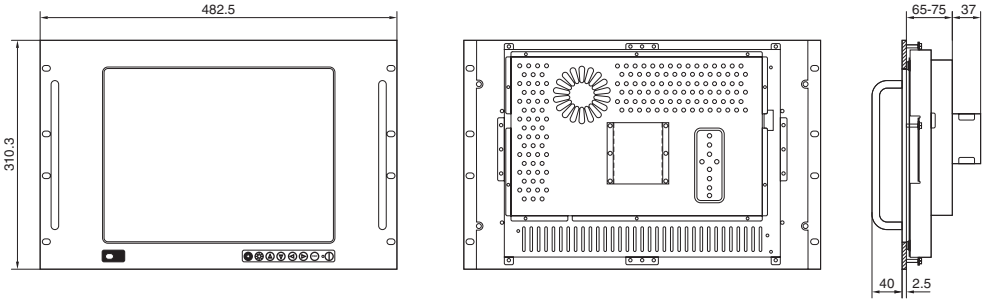
Packs of	Model No. RP
1	**3659.530**

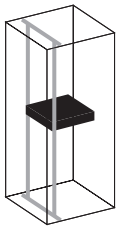
Material:
Front panel: Aluminium, powder-coated

Colour:
RAL 7035

Protection category:
Tested to EN 60 950 and
EMC directive 89/336/EEC.

Note:
Depth varies according to the display design (protective glass, touchscreen etc.).





Keyboard drawer 2 U

for one 482.6 mm (19″) attachment level
For keyboards up to 430 mm wide and 250 mm deep with the front panel folded over.

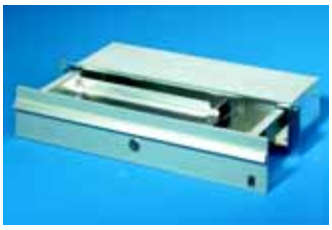
Material:
Sheet steel with aluminium front

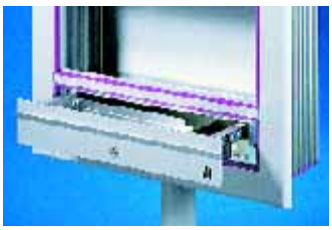
Colour:
RAL 7035

Supply includes:
Lockable drawer with handles,
folding front,
pull-out mousepad,
mouse support,
practical cable entry
and strain relief.

Height	Model No. DK
2 U	**7281.035**

To order in RAL 7032, please add the extension .000 to the Model No.
Delivery times available on request.
Installation depth: 390 mm.





Drawer 482.6 mm (19″)/2 U

for keyboard and mouse

For installation in:
- VIP 6000 command panel[1] (all installation depths **1** to **9**, see page 161).
- Optipanel Command Panel[1] (installation depth **3** = 150 mm, see page 173).
- Any sufficiently large surface. (e.g. door, side panel).
- 482.6 mm (19″) systems.

Suitable for
- Accommodation of keyboards up to a maximum of 390 x 32 x 139 mm.
- Support of standard commercially available mouse or trackball.

Design:
- Drawer:
  – with stay
- Font panel
  – with security lock (lock no. 12321)
  – with handle strip

Width mm	Height	Depth mm	Model No. CP

Drawer for keyboard

For a max. keyboard width of 500 mm.
Drawer with mousepad at the front.
A high level of protection is retained, even with the flap open.

Material:
Sheet steel

Colour:
RAL 7035

Protection category:
IP 55 to EN 60 529/10.91,
Complies with NEMA 12.

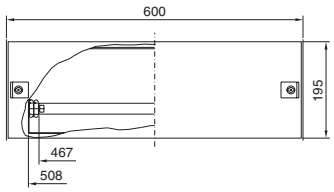
Supply includes:
Assembly parts.

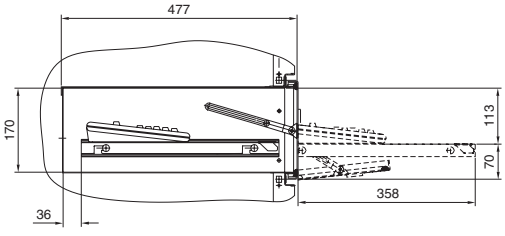
Note:
Only suitable for installation without mounting plate.

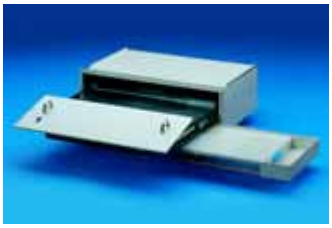
For universal console AP 2694.500	Model No. AP
	4757.500

Accessories:

Standard double-bit lock insert may be exchanged for 27 mm lock inserts, version A, see page 888.
Plastic handles, version B, see page 886.







Drawer for keyboard and mouse

with mousepad support

For installation in:
- VIP 6000 Command Panel[1)] (installation depth **4**, **6** or **8**, see page 161, 3.1)
- Any sufficiently large surface (e.g. door, side panel)

Suitable for accommodating
- Keyboards up to a maximum of 460 x 42 x 170 mm
- IP 67 mouse and mousepad
- Standard mouse and mousepad

Design:
- Drawer and enclosure
  – with side pull-out mousepad support and tray
- Font panel
  – with 3 mm double-bit lock insert
  – folds out as a wrist support

Width mm	Height	Depth mm	Model No. CP
482.6 (19″)	3.5 U	261	**6003.000**

Material:
Keyboard and drawer: Sheet steel
Front panel: Aluminium, natural anodised.

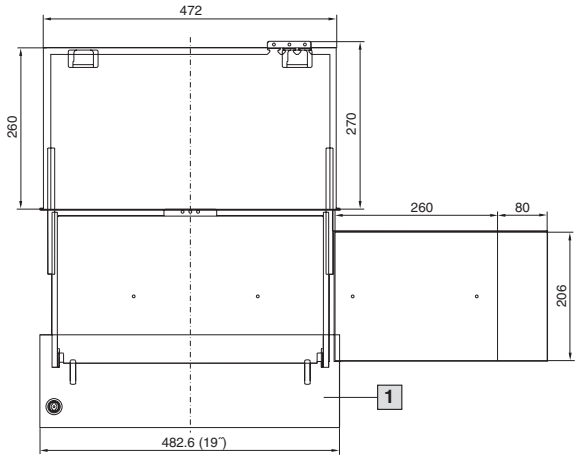
Supply includes:
Assembly parts for installation in VIP 6000 Command Panel.

Also required:

[1)] For sub-division of the operating front a cross member (see page 162, version 3.2) is required. At the same time, the end trim (see page 163, version 3.4) must be selected.

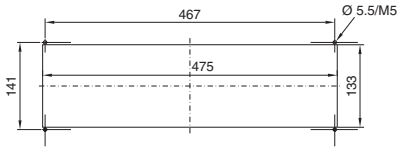
Accessories:

Mouse, mousepad IP 67, see page 1054.
Standard double-bit lock insert may be exchanged for 27 mm lock insert, version A, see page 888.



1 Front trim panel

Mounting cutout
for installation in surfaces



Drawer for keyboard and mouse

Bottom-mounting
Lockable with mousepad support, may be extended to the left and right, and hinged cable support for safe, pinch-free cable routing. Sealed cable entry for 3 cables (up to Ø 6 mm).

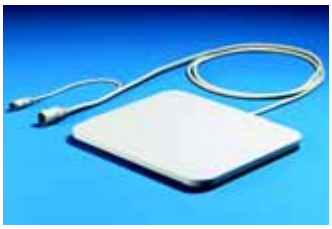
For mounting beneath
- Worktop
- Sufficiently large surfaces

Material:
Drawer housing:
Sheet steel, spray-finished in RAL 7035.
Drawer trim panel:
Plastic to UL 94-V0
in RAL 7035, 7015, 9006.

Protection category:
IP 55 to EN 60 529/10.91,
complies with NEMA 12.

Packs of	Model No. IW
1	**6902.910**

Mouse, mousepad



Mouse, mousepad IP 67

An ideal input device for all areas where heavy contamination is unavoidable, or where exceptional standards of hygiene are required, for example in the food industry or medical technology.
Because the mouse detects positions inductively, there is no need for a trackball, and the housing can be completely sealed with a protective film. This achieves a high protection category of IP 67. The mouse will only work in conjunction with the inductive mousepad IP 67.

Technical specifications:
PS/2 connection
Temperature range: 0°C to +55°C
Power consumption: < 20 mA
Cable lengths: 2000 mm

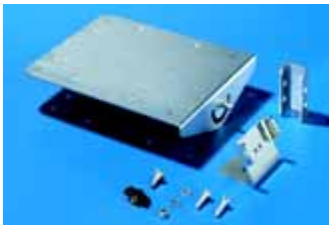
Material:
Mousepad: Plastic PBT
Mouse: Plastic ABS 9006.

Accessories:

Connector gland (SZ 2400.500),
see page 975.
Support for mousepad,
see page 1054.

	W x H x D mm	Colour RAL	Model No. SM
Inductive mousepad IP 67 PS/2 interface	250 x 205 x 15	similar to 7035	**6444.500[1)]**
Mouse IP 67 for mousepad SM 6444.500	–	similar to 7032	**6445.000**

[1)] German patent no. 198 51 619



Support for mousepad

for command panels and surfaces
To fit IP 67 mousepad SM 6444.500.
The angle of the mousepad support is individually adjustable.
Two holes are needed on the enclosure for attachment purposes.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Weight kg	Model No. SM
1.0	**2381.000**

Also required:

Vertical handle set for wide frame (for mounting on VIP 6000 with wide front frame),
see page 1033.

Accessories:

Holder for mouse,
see page 1055.
Mouse, mousepad IP 67,
see page 1054.

Holder for mouse

To match the mousepad support and for secure accommodation of a standard mouse or the IP 67 mouse SM 6445.000.

Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Weight kg	Model No. SM
0.3	**2382.000**

Also required:

Support for mousepad,
see page 1054.

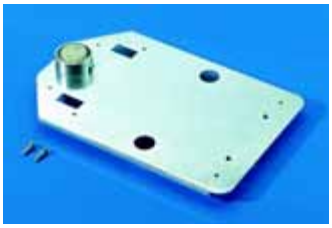
Mousepad, passive

For installing in PC enclosures based on ES.
Pulls out to the front or on the left or right.

For folding keyboard of PC enclosure/case	Model No. PC
4603.920 4617.920	**4613.000**

German patent no. 43 30 926

For drawer of PC enclosure/case	Model No. PC
4603.603 4603.913 4609.703 4617.703	**4614.000**



Support for mousepad, vertically hinged

For mounting on the left/right, beneath support for keyboards. Latches home automatically, both when retracted and extended.
With attachment holes for:
- Mousepad IP 67 (SM 6444.500)
- Mouse holder (SM 2382.000) to accommodate the IP 67 mouse.

With cutouts for cable routing and holes for attachment via cable ties, for fast assembly (SZ 2597.000).

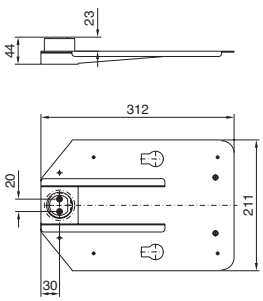
Material:
Sheet steel, zinc-plated, passivated

Supply includes:
Assembly parts.

Packs of	Model No. SM
1	**2383.020**

Accessories:

Mouse, mousepad IP 67,
see page 1054.
Holder for mouse,
see page 1055.
Cable ties,
see page 982.



Mobile workstation

Support for mousepad, pull-out

with mouse holder

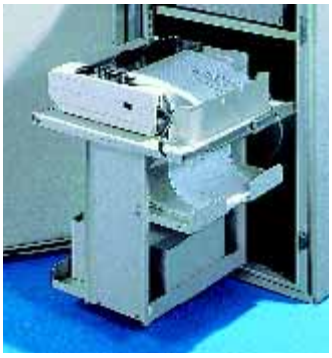
For screw-fastening into the fold-out tray SZ 2379.600/SZ 2379.800. To fit all standard mousepads up to 250 x 205 mm.

Note:
When installing the fold-out tray into the swing frame, the swing frame must be open in order to pull the mousepad out of the fold-out tray.

Packs of	Model No. SZ
1 set	**2379.900**

Accessories:

Mouse, mousepad IP 67,
see page 1054.



Printer rack

For installation in enclosures with
- 600 mm width
- 600 and 800 mm depth

Load capacity: 25 kg
Surface for printer (A4) 375 x 471 mm.

Material:
Sheet steel

Colour:
RAL 7035

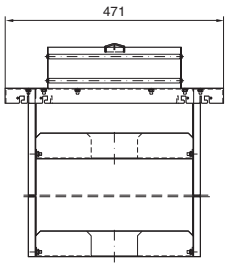
Supply includes:
Shelf for printer with telescopic slides,
paper tray and paper guide,
base for paper supply,
hinged cable support.

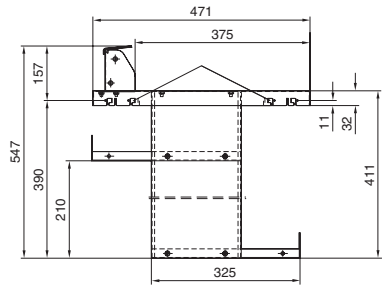
Packs of	Model No. PS
1	**4635.000**

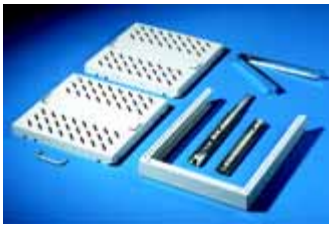
German patent no. 41 08 379
IR reg. design no. DM/016 439
with validity for BE, CH, DE, ES, FR, IT, LU, NL
French patent no. 2 660 534
GB patent no. 2 243 069

Also required:

For enclosure depth mm	For installation in TS, PC based on TS, 2 punched sections with mounting flanges, see page 921	ES, PC based on ES, 2 punched sections without mounting flanges, see page 925
600	TS 8612.060	PS 4376.000
800	TS 8612.080	PS 4377.000







Mobile workstation

for tower PCs, printers, UPS, servers etc.

Load capacity: 75 kg

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
1 mounting frame,
2 shelves, top/bottom,
1 set of telescopic slides,
1 handle,
1 cable support, hinged,
assembly parts.

Packs of	Model No. PC
1	**4641.000**

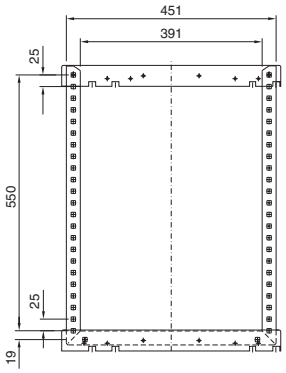
Also required:

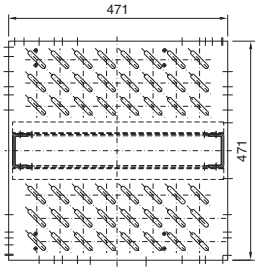
For enclosure depth mm	For installation in TS, PC based on TS, IW 2 punched sections with mounting flanges, see page 921	For installation in ES, PC based on ES 2 punched sections without mounting flanges[1], see page 925
600	TS 8612.060	PS 4376.000
800	TS 8612.080	PS 4377.000

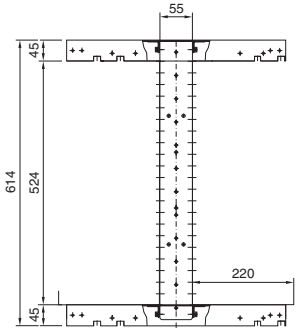
[1] plus:
4 support brackets, PS 4183.000, see page 933,
8 threaded blocks M6, PS 4162.000, see page 936,
8 screws M6, PS 2504.500, see page 937.

Accessories:

Fastening bolts DK 7115.000,
see page 953.
Shelf,
see page 1057.







Shelf

for mobile workstation
For additional equipment such as modems, power packs etc. or simply as a paper tray.
Installation heigth-adjustable on a 25 mm pitch pattern.

Material:
Sheet steel

Colour:
RAL 7035

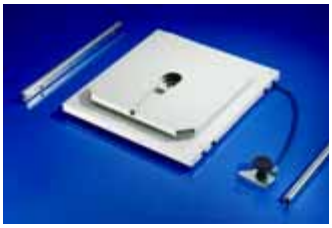
Supply includes:
Assembly parts.

Packs of	Model No. PC
1	**4642.000**

Accessories:

Fastening bolts DK 7115.000,
see page 953.

Printer accessories



Printer base, swivel

Operation of the printer for servicing purposes is possible, even in enclosures which are only accessible from the front.

Load capacity: 20 kg.
Surface for printer 340 x 360 mm.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Component shelf,
turntable with cable routing and stay,
telescopic slides.

To fit TS width x depth mm	Model No. IW
600 x 600	**6902.990**

Also required:

2 TS punched sections with mounting flages for enclosure depth of 600 mm,
see page 921.

Accessories:

Paper tray,
see page 1058.

Paper tray

for laser printers with rear output.
Printed pages are routed to the outside and collated. The door only needs to be opened for servicing purposes. This protects the printer against dust, humidity and theft. The paper tray may be mounted on surfaces with a width of 600 mm or more (e.g. door, side panel) and accommodates up to 20 pages of standard A4 paper.

Material:
Sheet steel

Colour:
RAL 7035

Supply includes:
Assembly parts.

Width x height x depth mm	Model No. IW
270 x 390 x 122	**6903.000**

Accessories:

Printer base, swivel,
see page 1058.

Rittal service:

Installation in doors and side panels on request.

Base

for tubular door frame
The space-saving alternative instead of component shelves to accommodate tower PCs (maximum 40 kg).
For screw-fastening to the tubular door frame of 600 mm wide enclosures based on TS.

Load capacity: 40 kg.

Material:
Sheet steel, spray-finished

Colour:
RAL 7015

Supply includes:
Retaining strap and assembly parts.

Width x height x depth mm	Model No. IW
495 x 159 x 230	**6902.950**

Also required:

Support strips for direct screw-fastening to the tubular door frame, see page 924.

Interface box

For secure accommodation for all common computer ports, 3½″ disk drives and sockets. The lockable metal cover provides a high mechanical load-bearing capacity, protects against unauthorised access and ensures an increased shielding effect for the installed equipment.

Modifications such as
- Other sizes
- Acrylic covers
- Cutouts for connectors etc.

are possible.

Material:
Frame:
Extruded aluminium section, powder-coated
Mounting tray:
Sheet steel, 1.5 mm, powder-coated
Flap:
Aluminium, 3.0 mm, natural anodised

Colour:
RAL 7035

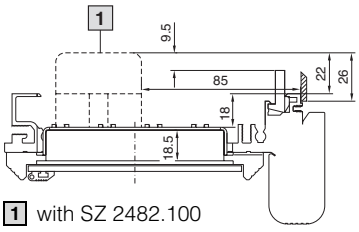
Supply includes:
Frame with hinged flap,
cam with security lock (No. 12321).
Mounting tray including seal and assembly parts.

Earthing-pin socket	Weight kg	Model No. SZ
Without	0.8	**2482.000**
With	0.8	**2482.100**

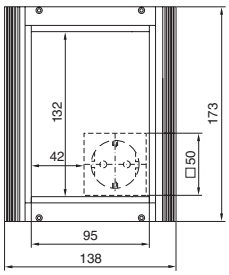
Rittal service:

Upon request, the interface box can be supplied with customer-specific cutouts, pre-installed in the operating housing. If required, please specify the desired treatment and installation position.

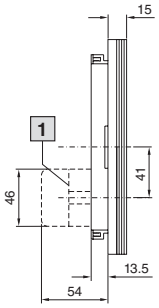
Mounting example in the VIP 6000:

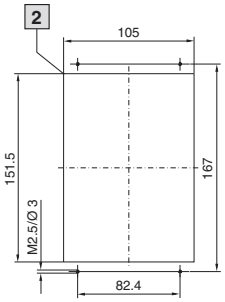


1 with SZ 2482.100
2 max. R3



Mounting cutout





Interface flap

The compact alternative to the interface box.
For secure accommodation of all standard sockets, computer ports, 3½″ or CD-ROM drives.
The cast aluminium flap ensures a high mechanical load-bearing capacity, and guards against unauthorised access.

For:
- Optipanel from D = 100 mm
- Any sufficiently large surface.

Standard double-bit insert may be exchanged for lock inserts, see page 881.

Material:
Flap: Cast aluminium, finely textured
Cover plate: Sheet steel 2 mm, zinc-plated, passivated

Colour:
RAL 7035

Protection category:
IP 65 to EN 60 529/10.91

Supply includes:
Seal and assembly parts.

Packs of	Model No. SZ
1	**2482.200**

Note:
For side mounting in 100 mm deep Optipanels, a handle set (CP 6385.0XX, see page 1031), may be mounted, although not in the same place.

Rittal service:

Cutouts are possible in the cover plate and enclosure.
Available without cover plate on request.

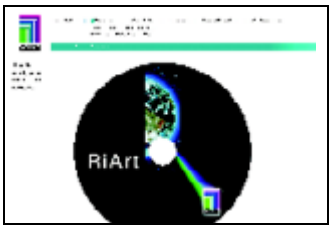
Rittal on the Internet

With innovations, product summaries, jobs and many other topics available on our homepage, Rittal's customers always have access to the very latest information. Product data, contract tender texts, dimensions and assembly instructions in Acrobat Reader format and demo versions of the Rittal software are available at any time for downloading from www.rittal.com. Want to order brochures via the Internet? No problem, with our special brochure request feature on our home-page. Rittal can also be contacted by e-mail.

New Internet services:
- Online college
- Online PDF of our product pages
- FAQs on our products

Extensive product search facilities

More detailed information can be found on the Internet.



RiArt

The electronic price list with product catalogue offers you:
- Data sheets in HTML, text and PDF format
- Excel price list
- DATANORM/ELDANORM component database
- Catalogues to eCl@ss/ETIM/BMEcat
- Shopping basket with Excel interface
- Component data for SV-Plan and EPLAN
- Contract tender texts
- DWG catalogue drawings
- Assembly instructions
- Quick climate calculation
- Software demo
- PDF pages from our latest brochures
- Accessory assignment

System requirements (minimum):
- Processor Pentium 233
- Internet Browser Version 4 or higher
- Adobe Acrobat Reader version 4 or above

Installation:
- Installation is not necessary. The program launches automatically when the CD is inserted.
- For a manual launch, click on the file microweb.exe.

Note:
Please order your free copy from **www.rittal.de**

German language only.

PlanIT 1.0

From Rittal's extensive range of products and solutions, we have compiled the information that is specifically relevant for the planning of IT enclosures, IT infrastructure and data centres.

The following applications are contained on this CD:
- Product overview
- Product search
- Documentation
- Enclosure monitoring software
- Drawings (VISIO)
- Brochures
- Contract tender texts (TXT, DOC, PDF, GAEB format)
- Contacts and contact deatils
- Lists of materials

In order to help you find your way around the CD, we have adapted the interface of the planning software to our website.

System requirements (minimum):
- Windows 98/NT/2000/XP
- Adobe Acrobat Reader version 4.x or above
- Visio

Note:
The software PlanIT 1.0 is sent free of charge on CD. Request from **info@rittal.de**

German language only.

Planning/project management/selection

Rittal SV-Plan

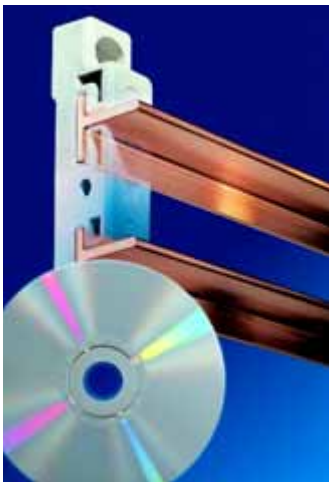
Rittal SV-Plan is an innovative tool for simple, time-saving project planning of Rittal SV busbar systems.
The network-compatible, multi-lingual software package includes the following functions:

- Planning certainty, thanks to logical allocation e.g. of standard commercially available power circuit-breakers to Rittal component adaptors.
- Detailed system and product information in the form of tender texts, product information, assembly instructions, CAD drawings etc.
- Integration of Rittal Power-Plan.
- Integration of a CAD interface based on Eplan View.
- Project documentation with calculations, parts lists and CAD system assembly drawing.
- Interfaces to all standard Windows applications such as Microsoft Word.
- Compatible with Eplan 5.

Supply includes	
CD-ROM	
Operating manual	
Language: German/English	
Model No. SV	**3020.100**

System requirements (minimum):

- Windows 95/98/NT/2000/XP
- RAM: 128 MB
- Hard disk capacity: at least 125 MB



Rittal Power-Plan

Rittal Power-Plan supports the calculation and documentation of busbar system assemblies with reference to the valid international test provisions. The network-compatible software provides a comprehensive database of power circuit-breakers.

The following calculations may be performed with Rittal Power-Plan:

- Testing the short-circuit resistance of the entire system assembly to IEC 60 865-1 or DIN VDE 0103.
- Testing the rated current load limit of the busbar system to DIN 43 671.
- Testing the heat loss of the entire system assembly, for D/NH fuse inserts to VDE 0636.
- Testing all data inputs for plausibility with corresponding, clear error messages.
- Calculations/documentation in accordance with IEC 60 439-1/EN 60 439 and DIN VDE 0660 part 500.

Supply includes	
CD-ROM	
Operating manual	
Language: German/English	
Model No. SV	**3020.000**

System requirements (minimum):

- Windows 95/98 or NT
- RAM: 8 MB
- Memory space required: 20 MB

ISV order software

for distribution enclosures

The ISV order software gives peace of mind when preparing a bill of materials, thanks to its logic. Specifically, this means that all the essential and optional accessory components are available to choose from a broad selection, and can be added to your shopping basket with a click of the mouse. Drawings support the user when selecting components.

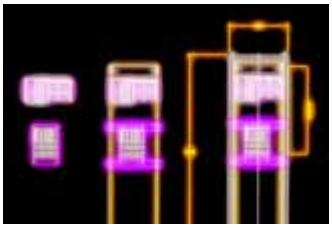
System requirements (minimum):

- Windows 98/ME/NT/2000/XP
- Pentium 90
- RAM: 16 MB
- Memory space required: 11 MB
- Resolution 800 x 600 pixels or higher
- Internet Explorer 4.0 or higher
- For the use of all functions, MS Excel and a CAD program with DXF import function are also required.

Language: German/English

Note:
Please download free of charge from
www.rittal.com/Service/Downloads/Software

Planning/project management/selection



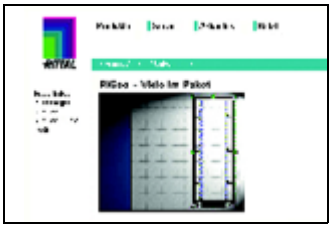
RiGeo

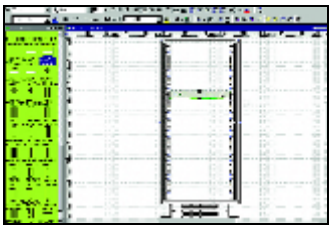
From the design into the CNC machine
With the RiGeo CD-ROM, Rittal offers an extensive library of geometry data for virtually all Rittal products in a variety of views and data formats. The files on the CD-ROM are divided into directories based on individual product groups to simplify the search process. It also supports a database search function.
Installation on the hard disk is not necessary, since the data may be read directly from the CD-ROM into your CAD system.

Features in brief:
- No unnecessary, memory-consuming storage on the hard disk.
- Simple positioning of accessory components.
- The correct format to suit every application.
- Representation to scale, suitable for CNC machining.

Supply includes	
CD-ROM	
Language: German/English/French/Dutch	
Model No. SZ	**2406.100**

System requirements (minimum):
- AutoCAD from Release 12 or LT for DOS or Windows or CAD with DXF interface





RiGeo + Visio package

The benefit to you:
The combination of the Visio program and the drawing library RiGeo offers perfect documentation of your projects in the shortest possible time.

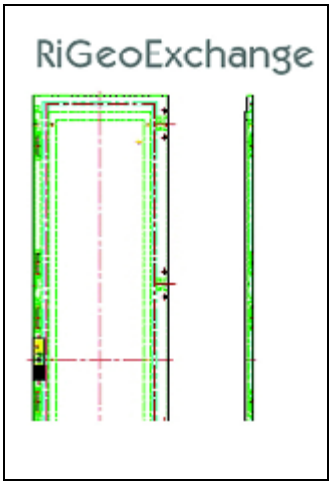
Features in brief:
- Carry out design and project planning work quickly and easily.
- No lengthy training needed.
- All Visio and DXF drawings are readily integrated.

Supply includes:
The package comprises:
- Several thousand DWG and DXF drawings of Rittal components.
- Visio drawings of TS network enclosures and accessories.
- The CAD drawing program “Visio 2000 Technical International Edition (English)”.

Drawing library and program for the preparation of precise technical drawings
With the drawing program “Visio 2000 Technical Edition”, technicians and engineers have at their disposal all the drawing tools needed to produce precise two-dimensional drawings and diagrams. Existing CAD drawings may be inserted into Visio 2000 Technical Edition drawings. You can cut and move the drawings, and show or mask out individual layers.

Supply includes	
CD-ROM	
Language: German/English	
Model No. SZ	**7700.200**

System requirements (minimum):
- Pentium 166 MHz, 64 MB RAM
- 125 MB free memory on the hard disk for Visio
- 400 MB free space for RiGeo



RiGeo Exchange

CAD components library for data exchange
The software offers significant benefits for all designers and technicians when preparing technical drawings of the Rittal enclosure and case systems AE, KL and TS.
- Rapid access to all essential drawings. RiGeo Exchange will immediately make the required detailed drawings available in the CAD file formats DWG and DXF for all standard CAD programs.
- Perfect generation of individual designs. Our customers receive all the necessary details to position cutouts and holes correctly on the electronic drawing board.
- Shorter delivery times. Depending on the type of modifications, drawing data may be forwarded directly into our machines for laser-cutting, nibbling and punching.

Note:
The software RiGeo Exchange is sent free of charge on CD.
Order your copy at **info@rittal.com**

RiDiag II

RiDiag II is a tool for diagnosing the operating behaviour of Comfort controller-regulated cooling units. By connecting a PC, it is possible to retrieve error messages, temperatures and capacity utilisation levels of the cooling units which are stored in the Comfort controller. The system includes integrated temperature measurement from four sensors in the cooling unit, and also features graphical representation of the temperature development over time.

Supply includes	
CD-ROM	
Connection cable	
Language: German/English/Italian	
Model No. SZ	**3159.100**

System requirements (minimum):
- Windows 95/98/2000/NT

CMC-TC Manager

For detailed information, see page 789.

Note:
The CMC-TC Manager may be downloaded free of charge from the Internet at **www.rittal.com, www.cmc-tc.com**.

CMC-TC Configurator

For detailed information, see page 788.

Note:
The CMC-TC Configurator may be downloaded free of charge from the Internet at **www.rittal.com, www.cmc-tc.com**.

Therm Software

Rittal Therm is a calculation program for climate control of enclosures.
All electrical and electronic components have a certain power loss which is dissipated to the environment in the form of heat. Because an increasing number of components are now being housed in ever smaller spaces, the heat produced can soon reach levels which are harmful to electronic components and may severely curtail their useful lives.
The Therm software package takes care of the complex calculation of climate control requirements. A user-friendly interface guides the operator to the most suitable, correctly dimensioned climate control component. All evaluations are closely based on the requirements of IEC/TR 60 890 AMD 1/02.95 and DIN3168 for enclosure cooling units.
Rittal Therm contains 15 languages.

Supply includes	
CD-ROM	
Model No. SK	**3121.000**

System requirements (minimum):
- Windows 95/98/ME/NT/2000/XP
- Adobe Acrobat Reader version 4.x or above

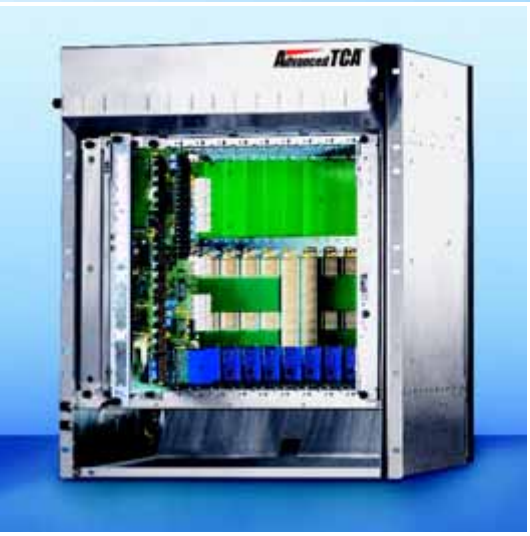
Note:
Your 30-day trial version may be downloaded free of charge from **www.rittal.com**

System integration

Rittal IT solutions – a broad spectrum of services for individual, complete packages.

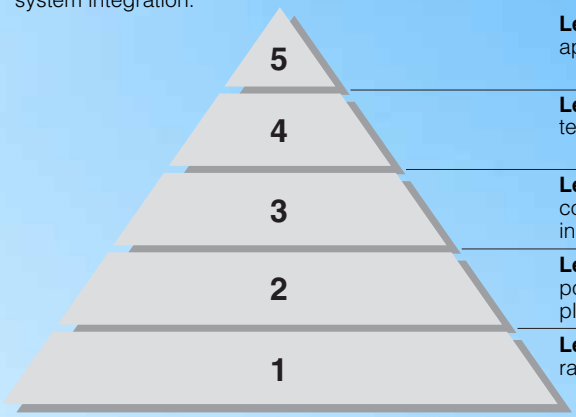
Thanks to **modular, mass-produced system components,** Rittal is able to achieve the optimum individual solution for every client, **quickly and cost-effectively.** Complete solutions, with no ifs or buts.

The extensive Rittal range, including climate control components, control and monitoring technology, system accessories and hardware components such as monitors and keyboards, is available for the configuration of individual solutions. **The benefits of system integration are as follows:** Only one project partner, significantly reduced planning and assembly work, and minimal logistics and procurement input. Rittal IT solutions – Simple and complete.



Rittal system integration up to Level 4

This is the cumulative result of extensive in-depth consultations and precision planning. For example, with climate control, power supply and security management through to Level 4 system integration.



Level 5: Level 4 with I/O and application software, tested

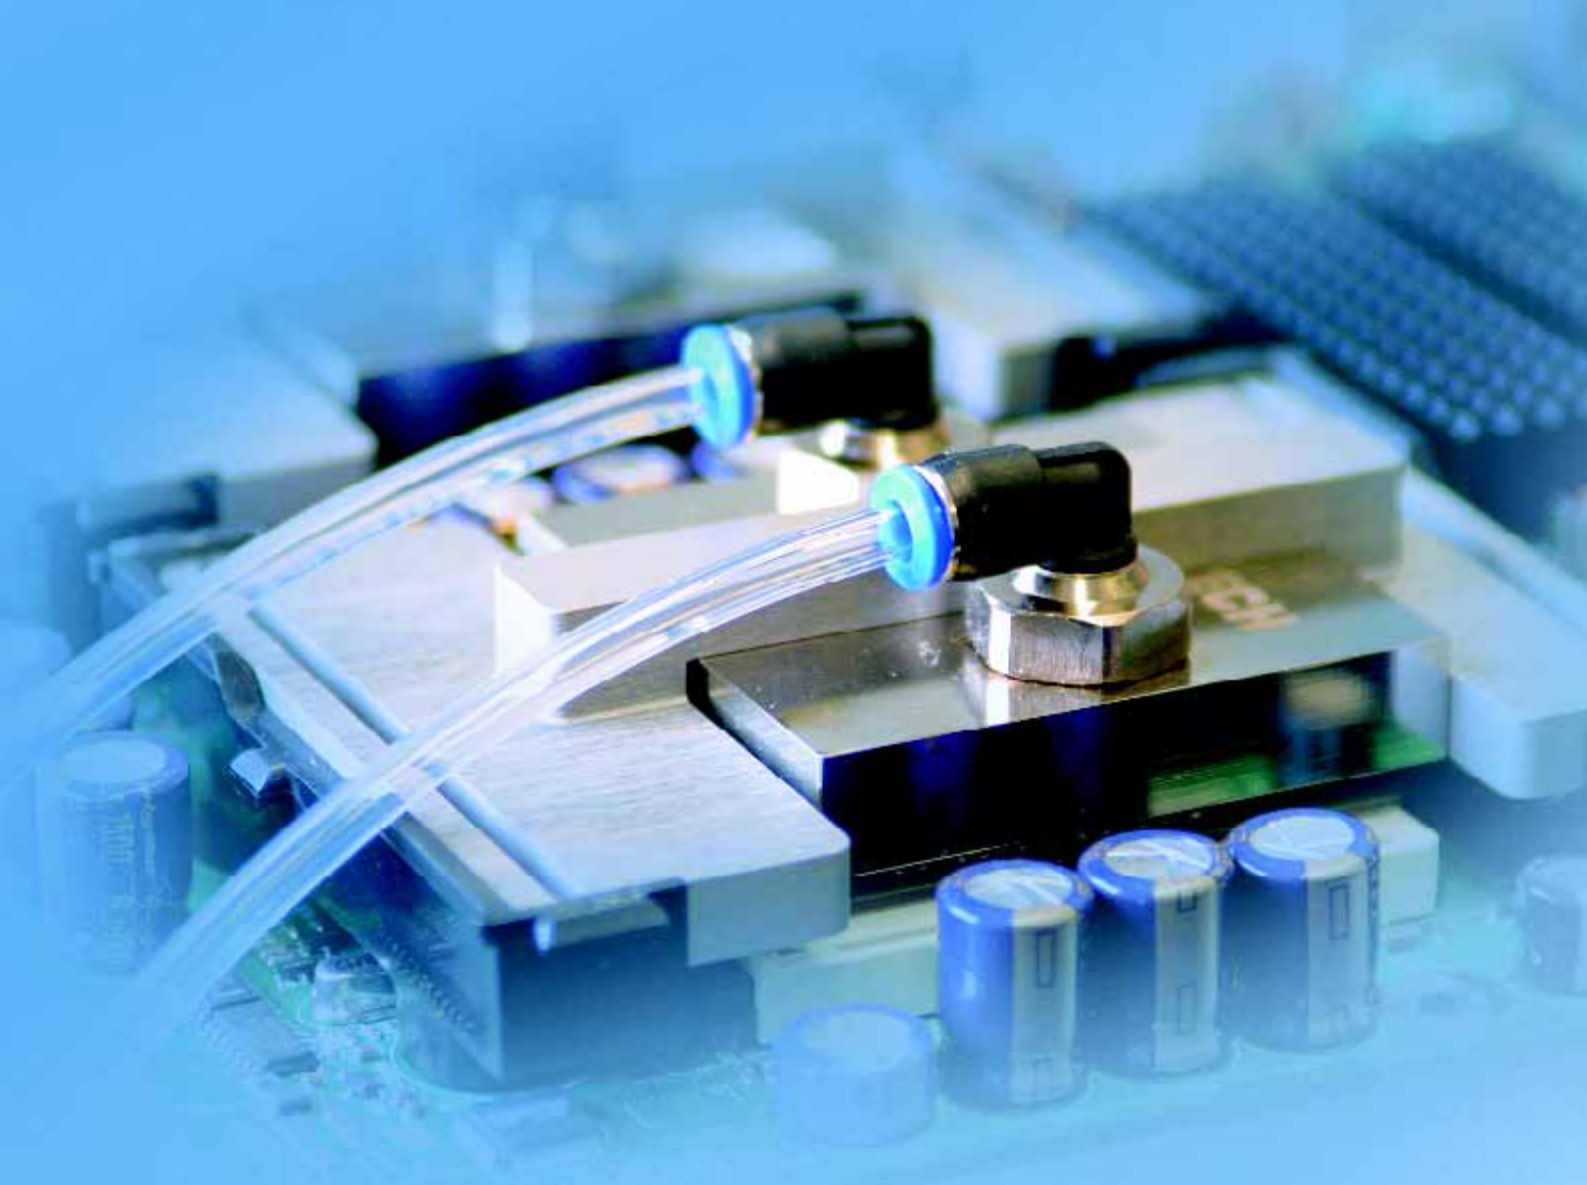
Level 4: Level 3 with integral boards, tested

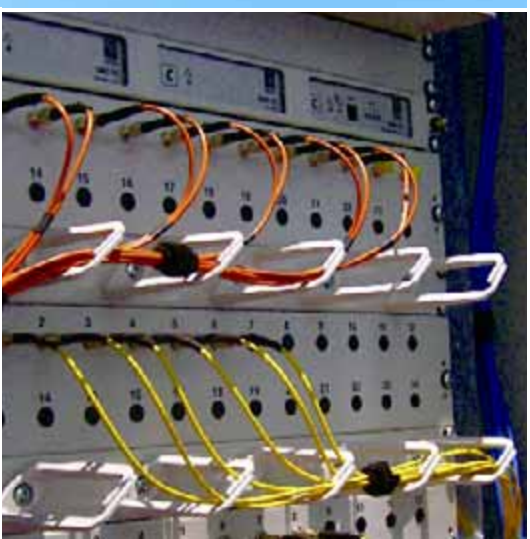
Level 3: Integration, wiring of various components (e.g. MPS systems including backplane, power pack)

Level 2: Pre-configuration, population (e.g. subracks, backplanes, front panels)

Level 1: Components (e.g. guide rails, connectors, etc.)

The complete Rittal IT solutions know-how for products and services is a coordinated, integrative system. It comprises advice, planning, prototype construction, individual production and assembly, as well as distribution tailored to customer requirements.





To suit your applications

Rittal views every customer requirement as a challenge. The **extensive product portfolio** with the matching system accessories and the **comprehensive range of services ensures that your requirements** are met.

4

Top quality ex-works

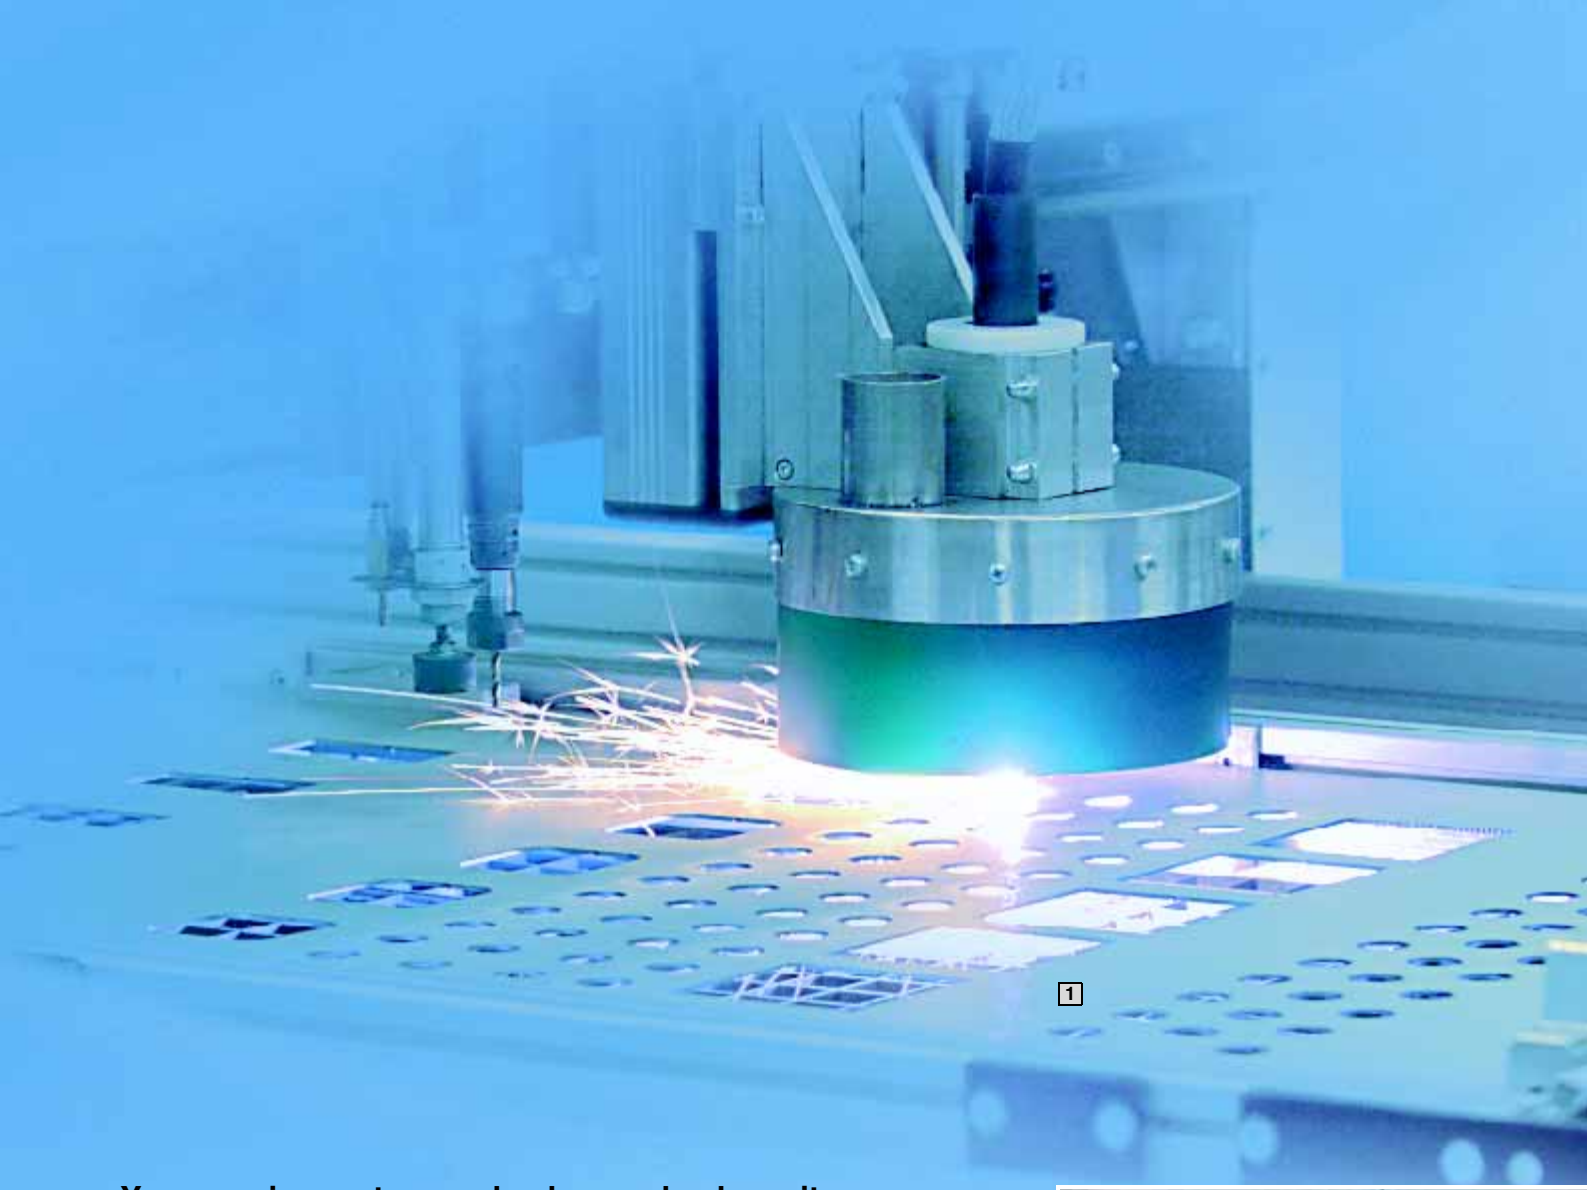
Rittal combines mass production with customisation in a variety of ways, to your benefit.

1 **Mass-produced individuality**
Cutouts and holes are made in the factory, prior to surface coating. The advantage: Unrestricted corrosion resistance.

2 Modified **dimensions**
With the Optipanel command panel, individual sizes come as standard.
Special sizes can also be produced for our other product series.

3 **Mounting of accessories**
The comprehensive range of Rittal system accessories and assembly ex-works offer cost advantages.

4 **Project-specific production**
...such as this rack for mobile railway technology.



Your requirements can also be resolved on site

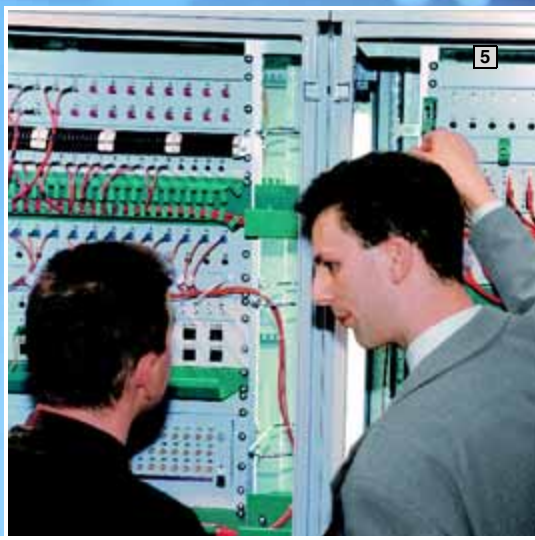
We put our good advice into practice. Impressive solutions, achieved with partners in your proximity. Availability and service combine to create convincing results. Fast and cost-effective.

5 Advice, exhibitions, training
Get your product information hands-on! Discover new routes to practical, inexpensive solutions.

6 Preparing cutouts
Cutouts and drilled holes for climate control components, switches, instruments and monitors. Take the easy option.

7 Plug and play with system accessories
Opt for the ready-made solution. Opt to install base/plinths, side panels, fan-and-filter units, lights, punched sections, earth rails, CMC monitoring systems and many other modules from our extensive range of accessories.

This service offers substantial time and money savings.



1 **Herborn** is the collation point for outstanding ideas from all the world's markets, as well as being our research and development site.
Compact enclosures are also produced in Herborn.

2 **Rittershausen –** Rittal's birthplace, and the production site for all large enclosure systems. New techniques have been developed here for manufacturing the "ri-volutionary" profile of the new Top enclosure system TS 8, the system platform for a broad, future-oriented application range.

3 The factory in **Burbach** concentrates on the production of large enclosures (free-standing enclosures and bayed systems) and accessory components.

Rittal in Germany

Rittal draws on the technological expertise of entire regions. At the heart of Rittal's success are innovations consistently tailored to market requirements, encompassing the product range, the production techniques and our services. Specialist expertise is concentrated at each of our sites, using state-of-the-art production techniques. Each day, we produced thousands of products whose quality and perfection are a constant source of delight to our customers worldwide.

4 Climate control is a decisive safety factor in modern factory automation. In order to meet these growing requirements, the Rittal climate control factory in **Rennerod** has been fitted according to the very latest criteria.

5 Rittal **Wissenbach** specialises in the production of stainless steel enclosures and cases. The requirement profiles are corrosion protection and hygiene – particularly for the chemicals and food production industries.

6 Rittal **Bad Köstritz** utilises its knowledge of steel processing for the versatile components of enclosure interior installation. Customer-specific solutions are also realised here.

7 The new Rittal logistics centre in **Haiger** boasts an ideal location, with excellent motorway and rail links. CS Outdoor enclosures, with an emphasis on mobile communications applications, are developed and produced here.

Rittal in Asia and Australia

China is a key market for Rittal. The domestic market is booming, the regional proximity to Japan also offers a host of benefits, and the presence of multinational companies is constantly growing. For this reason, we also manufacture in China according to popular international standards, in one of the most modern enclosure and case production plants in the world.

The Indian economy is likewise showing impressive growth rates. In order to ensure that products are available within the shortest possible time, we have been producing enclosures and climate control components to international standards in India since 1997, for distribution throughout Asia and Australia.

1

1 Since November 2000, Rittal **Shanghai, China** has supplied the Chinese market, which already has a successfully established distribution network. Apart from industrial enclosures and cases, the focus is also on products for the IT market.

2 At the Rittal production site in **Doddaballapur, India** standardised enclosures and cases are mass-produced for the large Asian market. Here too, Rittal offers its renowned international customer service, as well as local advice and expertise.

3 Since 1998, a Rittal subsidiary in **Japan** has been offering customised solution diversity. The modification centre with state-of-the-art machinery and a flexible assembly team achieves customised requirements with speed and perfection, as well as offering integration of system accessories. Four locations with more than 6000 m^2 of storage space ensure market proximity and availability.

4 At the modification centre in Rittal **Australia**, mechanical modifications are carried out, and special panels and spray finishes are produced. These services are a perfect representation of the Rittal concept, “individual solutions on the basis of standard modules”.

Rittal in Europe and the USA

Europe: In Plymouth, England, the main focus is on enclosure technologies for electronics. Effective cooling is the theme of our plant in Valeggio, Italy. There, recooling systems with cooling outputs of up to 172 kW leave the factory, either as standard products or manufactured to individual specifications. With its favourable location, the Ertop plant in France supplies high-tech application sectors with packaging products. Meanwhile, in the USA: State-of-the-art, sales-oriented production plants in Urbana and Springfield serve the markets on the American continent. Here, the emphasis is on speed and meeting customer-specific requirements.

1 Rittal products for modern electronic packaging leave the Rittal plant in **Plymouth,** England for distribution around the world.

2 System climate control is the theme of the Rittal plant in **Valeggio,** Italy.
In 2003 a brand new production line commenced operation, producing recooling systems, cooling units, heat exchangers and fan-and-filter units on an area of 9500 m^2. One particular strength is the production of customised recooling systems.

3 On a production and administration site of 8700 m^2, products for discerning applications are manufactured, as well as providing a comprehensive customer service. Integral 482.6 mm (19″) solutions and enclosures for the aviation and aerospace industries are just some of the specialities of the Rittal plant in **Ertop,** France.

4 The Rittal production and distribution centre at **Springfield,** USA serves the entire American market with modern, sales-oriented production and distribution control.

5 Rittal's largest distribution and production site outside of Europe is the plant in **Urbana,** USA. Here, predominantly large enclosures, PC enclosure systems and Top-Therm cooling units are produced on a site of around 20000 m^2. The affiliated logistics centre serves the entire US market.

5

4

To ensure a perfect solution, the final element needed is **technical background information.** Here, we supplement the order information with detailed drawings, load curves, parts lists and performance diagrams. Additional **information and download options** such as approvals, CAD drawings or assembly instructions are available from **www.rittal.com.**

The CD-ROM has the same content as the Catalogue – with added user-friendliness. Cross-references help you to arrive quickly at the desired solution.

What is more, whilst online, any Model Number will take you directly to further information in the Rittal database on the Internet.

Surface protection

The triple treatment of outer surfaces – phosphating, electrophoretic dipcoat-priming and textured powder-coating – provides optimum corrosion protection for enclosures such as TS, AE, KL. In order to ensure optimum corrosion protection in all climatic zones, the materials aluminium or zinc-plated metal with subsequent zinc phosphating and powder-coating are used for outdoor enclosures.

The standard coating is resistant to:

- Mineral oils
- Lubricants
- Machining emulsions
- Solvent (briefly e.g. for cleaning)
- Weak acids and alkalines.

This has been tested and confirmed by various independent test institutes.

Quality is ensured by continuous process monitoring.

Priming or powder coating suitable for overpainting

After careful cleaning of the surface, the standard coating may be overpainted with:

- DD gloss paints
- Single and dual-component gloss paints
- Car repair paints
- Powder paints
- Water-based paints

If in doubt, perform a compatibility test. Always follow the paint manufacturer's instructions. When overpainting, take care not to exceed 180°C and a baking time of 15 minutes.

Special coatings

Tropical coating:
For high corrosion resistance in warm, damp climates, also suitable for outdoor and long-term use.

Chemical paint:
For the best possible resistance to organic and anorganic substances that can be achieved with paint.

Outdoor use of enclosures

In order to guarantee satisfactory long-term function of enclosures in outdoor use, the relevant environmental factors need to be taken into account.

These include:

- UV radiation, the corrosive action of air pollution, rain, icing, snow, wind or other factors in special climatic conditions.

Influence of weather conditions on the outer coating
It is necessary to ensure the UV and corrosion resistance of components exposed to the weather. A special 3-phase paint finish is suitable for outdoor siting in European climates. For outdoor siting of an enclosure, a rain canopy should be provided to protect the seal against permanent humidity and UV radiation.

Condensation inside the enclosure
Condensation needs to be prevented by means of appropriate measures, e.g. by venting or heating the enclosure.

Protection category
The enclosure is exposed to extreme weather conditions during outdoor use.
Long periods of rain, snow, ice, high winds and temperature fluctuations place particularly high demands on the enclosure sealing. Often, the protection category for outdoor weather exposure prescribed in DIN VDE 0100, part 737, point 5.2, IP X3 is insufficient to provide permanent protection of electrical installations.

Standard IEC 60 529 offers the option of labelling with the supplementary letter "W". Enclosures thus labelled are suitable for use in weather conditions agreed between the manufacturer and the user, and are equipped with additional protective features or techniques (e.g.: rain canopy, special spray finish, special colour shade).

The three-phase coating process for enclosures

Coating procedures	Technical properties	Technical specifications	
Degreasing, iron phosphating, rinsing	Used for passivation, as a temporary corrosion protection, and to improve paint adhesion.		
Anodic dipcoat priming	Even layer formation on all surfaces, edges and in cavities, which produces a high level of corrosion protection even at the assembly stage.	Coat thickness	approx. 20 µm
		Erichsen cupping DIN EN ISO 20 482	≥ 4 mm
		Buchholz hardness DIN EN ISO 2815	≥ 80
		Cross cutting DIN EN ISO 2409	Gt 0
	The primer is readily overpainted and free from heavy metals, chromate and silicone.		
Stove enamelling			
Textured powder coating	Powder coating is distinguished by a high level of mechanical resistance, excellent corrosion protection, good resistance to chemicals, temperature and weather, and its facility for decontamination.	Outer coating thickness	60 µm . . . 110 µm
		Erichsen cupping DIN EN ISO 20 482	≥ 4 mm
		Buchholz hardness DIN EN ISO 2815	≥ 80
		Cross cutting DIN EN ISO 2409	Gt 0
	The powder coating is readily overpainted and is free from heavy metals, chromate and silicone.		
Stove enamelling		Overall outer coating thickness	Ø 80 µm . . . 135 µm

Protection categories to IEC 60 529

The IP protection category is characterised by 2 numbers.

Example of protection category: e.g. IP 43:

Code letters	
IP	
First characteristic numeral	Second characteristic numeral
4	3

Degrees of protection for protection against contact and foreign bodies: First characteristic numeral			**Degrees of protection for protection against water: Second characteristic numeral**		
First characteristic numeral	Degree of protection		Second characteristic numeral	Degree of protection	
	Description	Definition		Description	Definition
1	Protected against solid foreign objects with a diameter of 50 mm and greater	The object probe, a sphere 50 mm in diameter, must not penetrate fully[1].	1	Protected against vertically falling water drops	Vertically falling drops shall have no harmful effects.
2	Protected against solid foreign objects with a diameter of 12.5 mm and greater	The object probe, a sphere 12.5 mm in diameter, must not penetrate fully[1]. The articulated test finger may penetrate up to its length of 80 mm, but adequate distance must be adhered to.	2	Protected against vertically falling water drops when the enclosure is tilted up to 15°	Vertically falling drops must not have any harmful effects when the enclosure is tilted up to 15° in both directions from the vertical.
3	Protected against solid foreign objects with a diameter of 2.5 mm and greater	The object probe, a sphere 2.5 mm in diameter, must not penetrate at all[1].	3	Protected against spraying water	Water sprayed at an angle of up to 60° on either side of the vertical must have no harmful effects.
4	Protected against solid foreign objects with a diameter of 1.0 mm and greater	The object probe, a sphere 1.0 mm in diameter, must not penetrate at all[1].	4	Protected against splashing water	Water splashed on the enclosure from every direction must not have any adverse effects.
5	Dust-protected	The ingress of dust is not fully prevented, but dust may not enter to such an extent as to impair satisfactory operation of the device or safety.	5	Protected against water jets	Water splashed on the enclosure from every direction must not have any adverse effects.
6	Dust-tight	No ingress of dust at a partial vacuum of 20 mbar inside the enclosure.	6	Protected against powerful water jets	Water splashed on the enclosure from every direction in a powerful jet must not have any adverse effects.
			7	Protected against the effects of temporary immersion in water	Water must not ingress to such an extent as to cause harmful effects when the enclosure is temporarily immersed in water under standardised pressure and time conditions.
			9K[2]	Water with high-pressure/steam-jet cleaning[2]	Water directed at the enclosure from every direction under greatly increased pressure must not have any adverse effects.

[1] The full diameter of the object probe must not pass through an opening of the enclosure.
[2] This test is not regulated by EN 60 529, but by DIN EN 40 050, part 9.
Extracts from BS EN 60 259: 1991 are reproduced with the permission of BSI. Complete editions of the standards can be obtained by post from BSI Customer Services, 889 Chiswick High Road, London W4 4AL

NEMA

The **N**ational **E**lectrical **M**anufacturers **A**ssociation (NEMA) is a standards organisation in Washington, USA, which publishes a number of technical standards but does not test or certify products itself.

The following NEMA classification outlines the protection of individuals from unintentional contact with equipment and the protection of an enclosure from external factors.

Further information on protection categories may be found on the Internet at: **www.rittal.com**

UL/NEMA Type	Intended use and description
1	Enclosures for use predominantly inside. Protection against the penetration of foreign bodies.
3	Enclosures for use predominantly inside. Protection against the penetration of solid bodies, protection against the ingress of rain and dust and damage caused by icing.
3R	Enclosures for use predominantly inside. Protection against the penetration of solid bodies, protection against the ingress of rain and dust and damage caused by icing.
3S	Enclosures for use predominantly inside. Protection against rain, snow and foreign bodies. External mechanisms remain usable despite being coated in ice.
4	Enclosures for indoor or outdoor use. Protection against rain, foreign bodies, splashed water and hosed water and against damage caused by icing on the exterior of the enclosure.
4x	Enclosures for indoor or outdoor use. Protection against rain, foreign bodies, splashed water and hosed water and against damage caused by icing on the exterior of the enclosure.
12, 12K	Enclosures for use predominantly inside. Protection against dust deposits, foreign bodies and non-corrosive dripping liquids.
13	Enclosures for use predominantly inside. Protection against dust deposits, sprayed water, oil, and non-corrosive coolants.

The UL classifications are not directly comparable with IP protection categories, since both the test conditions and the evaluation of the test results are different.

Approvals and permits

Product certifications and approvals are key requirements for the global acceptance of industrial products.

Rittal products meet the highest internationally recognised quality yardsticks. All components are subjected to the most stringent testing in accordance with international standards and regulations.

The consistently high product quality is ensured by a comprehensive quality management system. Regular production inspections by external test institutes also guarantee compliance with global standards.

A precise allocation of products to marks of conformity can be found on our product and service pages on the Internet. **www.rittal.com**

Enclosure designs guaranteeing hygiene and effective cleaning

Special applications require special solutions – in terms of materials, design and security.

This is all the more true for applications in the foods and hygiene sector and in sensitive fields such as medical technology and pharmaceuticals.

Consequently, Rittal has been looking intensively at the quality standards in these branches and has subjected its products to stringent testing.

The CE symbol

All Rittal products subject to an EU Directive which envisages labelling are labelled CE.

Up-to-date manufacturer declarations for the respective products are available on the Internet at: **www.rittal.com**

Note:
The CE symbol is not a quality symbol. Conformity is certified by the manufacturer on an independent basis. This distinguishes CE labelling from approvals, which are issued by independent bodies.

Earthing

The earthing must be designed by the manufacturer of switchgear in accordance with the relevant VDE provisions or local regulations.

The enclosure packs generally contain earthing materials (screws, nuts, washers). The assembly instructions contain recommendations on installing a protective earth.

The pre-assembled earth straps available in various cross-sections and lengths, are intended to make assembly of a PE conductor easier.

Further information can be found in our technical documentation “PE conductor connection, current carrying capacity”.
